#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Distributors	2.3%
	Multiline Retail	0.56%
	Hotels Restaurants & Leisure	0.26%
Healthcare	Health Care Equipment & Supplies	2.96%
Industrials	Building Products	4.03%
	Trading Companies & Distributors	3.76%
	Machinery	22.3%
	Construction & Engineering	2.8%
	Commercial Services & Supplies	17.76%
	Electrical Equipment	1.6%
	Industrial Conglomerates	1.27%

	Water Utilities	17.09%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 6.48%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 3.7%
- 2) climate change adaptation: 0.04%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of

best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

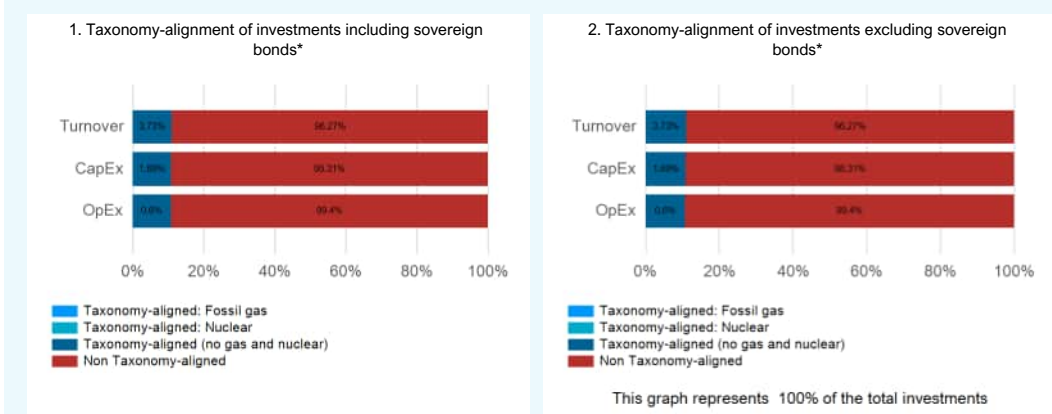

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.08% for transitional activities and 0.6% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.1% based on Turnover, 0.4% based on CapEx and 0.6% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.1% based on Turnover, 0.4% based on CapEx and 0.6% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 6.61% based on Turnover, 2.11% based on CapEx and 1.07% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 6.61% based on Turnover, 2.11% based on CapEx and 1.07% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 47.23%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 16.68%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aligning to the fund's sustainability theme.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - World Fund

Legal entity identifier:
5493001CZJOXQY9N2O82

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 71.93% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.17%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.45 vs. 7.07

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 71.93%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.01%

iv) the percentage of the fund invested in sustainable investments with a social objective: 31.88%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.74%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 60.97%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 28.22%
- v) the percentage of the fund invested in sustainable investments with a social objective: 31.7%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.59%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 67.32%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 33.79%
- v) the percentage of the fund invested in sustainable investments with a social objective: 32.35%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 71.93% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Microsoft	Information Technology	5.68%	United States
Amazon.Com	Consumer Discretionary	3.7%	United States
Alphabet (A)	Information Technology	3.42%	United States
JPMorgan Chase &	Financials	2.95%	United States
Meta Platforms (A)	Information Technology	2.56%	United States
Fidelity Institutional Liquidity Fund - A-ACC-USD	Open Ended Fund	2.4%	Ireland
Mastercard (A)	Financials	2.05%	United States
Sony Group	Consumer Discretionary	1.86%	Japan
Astrazeneca	Healthcare	1.84%	United Kingdom
KBC Group	Financials	1.83%	Belgium
SSE	Utilities	1.79%	United Kingdom
Insulet	Healthcare	1.71%	United States
Nvidia	Information Technology	1.64%	United States
Deutsche Boerse AG	Financials	1.6%	Germany
Intercontinental Exchange	Financials	1.58%	United States

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 71.93% in sustainable investments.

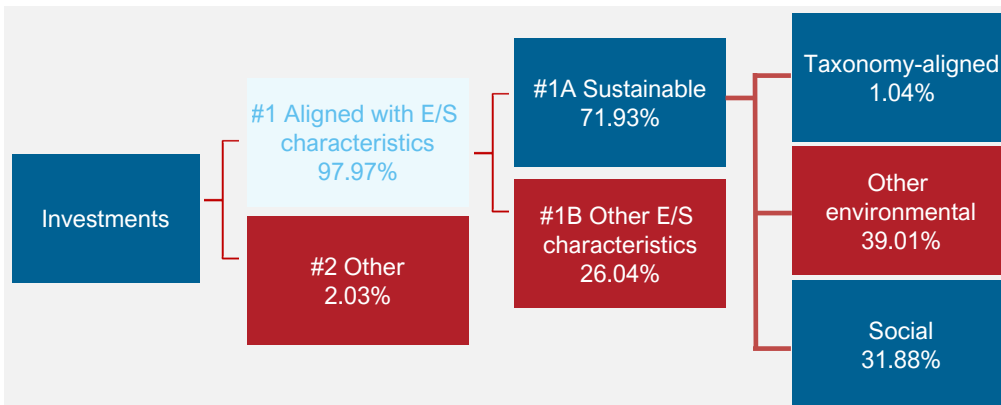

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.97%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 71.93% in sustainable investments of which 1.04% have an environmental objective (which is aligned with the EU Taxonomy), 39.01% have an environmental objective (which is not aligned with the EU Taxonomy) and 31.88% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Media	1.58%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.04%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.55%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

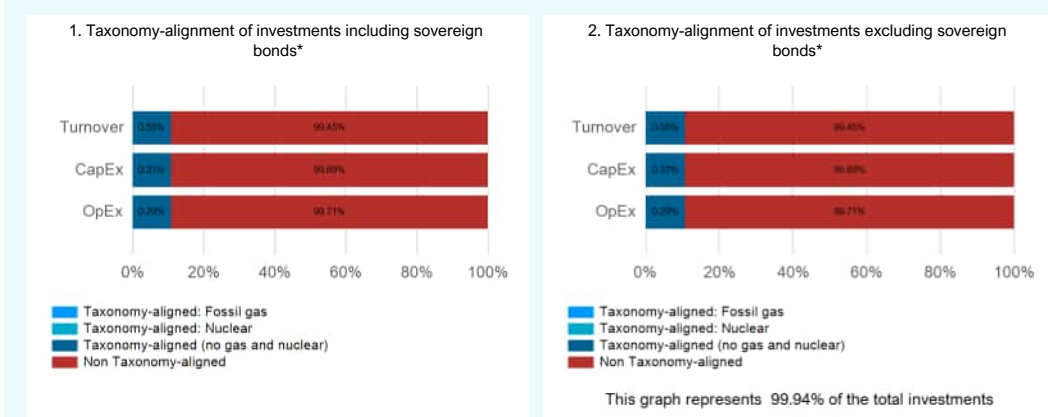

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 0.27% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.3% based on Turnover, 3% based on CapEx and 2.1% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.3% based on Turnover, 3% based on CapEx and 2.1% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.33% based on Turnover, 2.23% based on CapEx and 2.01% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.33% based on Turnover, 2.23% based on CapEx and 2.01% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.01%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 31.88%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 37.87% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.93%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.26 vs. 6.85

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 37.87%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 21.13%

iv) the percentage of the fund invested in sustainable investments with a social objective: 16.64%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 90.33%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 34.78%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.87%
- v) the percentage of the fund invested in sustainable investments with a social objective: 13.91%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.62%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 40.08%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 23.49%
- v) the percentage of the fund invested in sustainable investments with a social objective: 16.59%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 37.87% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Samsung Electronics	Information Technology	4.61%	Korea (South)
Taiwan Semiconductor Manufacturing	Information Technology	4.15%	Taiwan
Evolution Mining	Materials	3.77%	Australia
AIA Group	Financials	3.64%	Hong Kong
Embassy Office Parks REIT	Real Estate	3.62%	India
HKT Trust & HKT	Communication Services	3.37%	Hong Kong
Singapore Exchange	Financials	3%	Singapore
Samsung Fire & Marine Insurance	Financials	2.93%	Korea (South)
ALS	Industrials	2.81%	Australia
DFI Retail Group Holdings	Consumer Staples	2.74%	Hong Kong
Treasury Wine Estates	Consumer Staples	2.7%	Australia
Haier Smart Home (H)	Consumer Discretionary	2.63%	China
Fidelity Institutional Liquidity Fund - A-ACC-USD	Open Ended Fund	2.61%	Ireland
China Mengniu Dairy	Consumer Staples	2.58%	China
BOC Aviation	Industrials	2.54%	Singapore

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 37.87% in sustainable investments.

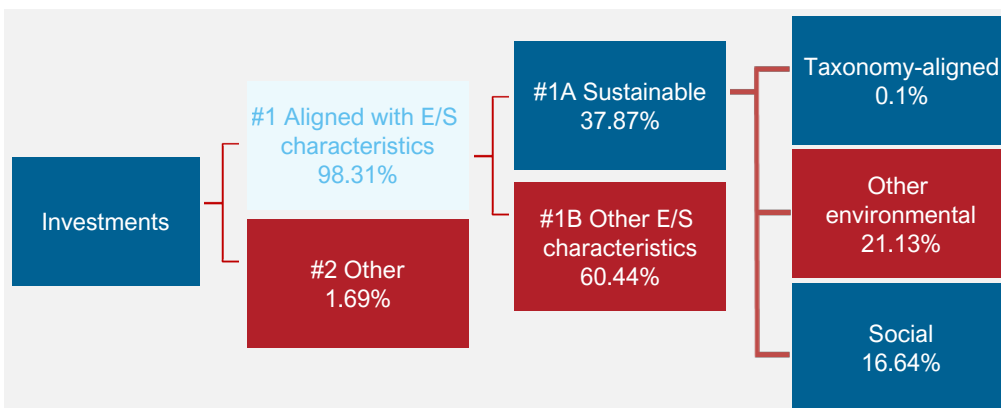

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.31%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 37.87% in sustainable investments of which 0.1% have an environmental objective (which is aligned with the EU Taxonomy), 21.13% have an environmental objective (which is not aligned with the EU Taxonomy) and 16.64% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	5.26%

	Independent Power Producers & Energy Traders	1.71%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.1%. This contributed to the following environmental objectives:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable

power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- 1) climate change mitigation: 0.09%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

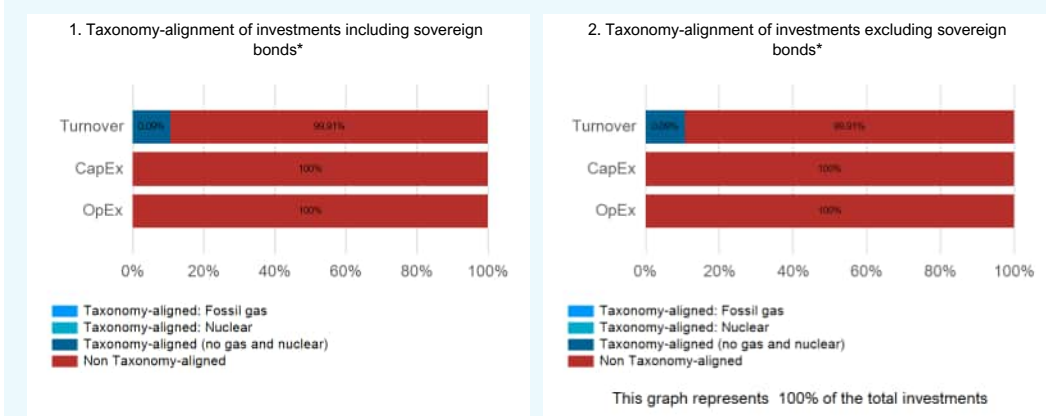

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

EU Taxonomy Regulation is 0% for transitional activities and 0.09% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.11% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.11% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 21.13%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 16.64%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.78%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.90 vs. 7.42

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 83.15%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 45.61%

iv) the percentage of the fund invested in sustainable investments with a social objective: 34.97%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 96.43%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 72.26%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.39%
- v) the percentage of the fund invested in sustainable investments with a social objective: 40.65%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 95.04%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 78.36%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 41.12%
- v) the percentage of the fund invested in sustainable investments with a social objective: 34.99%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 83.15% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Ferrovial SE	Industrials	4.39%	Netherlands
Fidelity Institutional Liquidity Fund - A-ACC-EUR	Open Ended Fund	3.87%	Ireland
Industria De Diseno Textil SA	Consumer Discretionary	3.75%	Spain
3i Group	Financials	3.73%	United Kingdom
Ahold Delhaize	Consumer Staples	3.28%	Netherlands
Totalenergies SE	Energy	3.09%	France
Unilever	Consumer Staples	3.06%	United Kingdom
RELX	Industrials	2.91%	United Kingdom
Unicredit (A)	Financials	2.9%	Italy
Kone (B)	Industrials	2.68%	Finland
Coca-Cola Europacific Partners	Consumer Staples	2.67%	United Kingdom
Natwest Group	Financials	2.54%	United Kingdom
KBC Group	Financials	2.5%	Belgium
Allianz	Financials	2.45%	Germany
AIB Group	Financials	2.37%	Ireland

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 83.15% in sustainable investments.

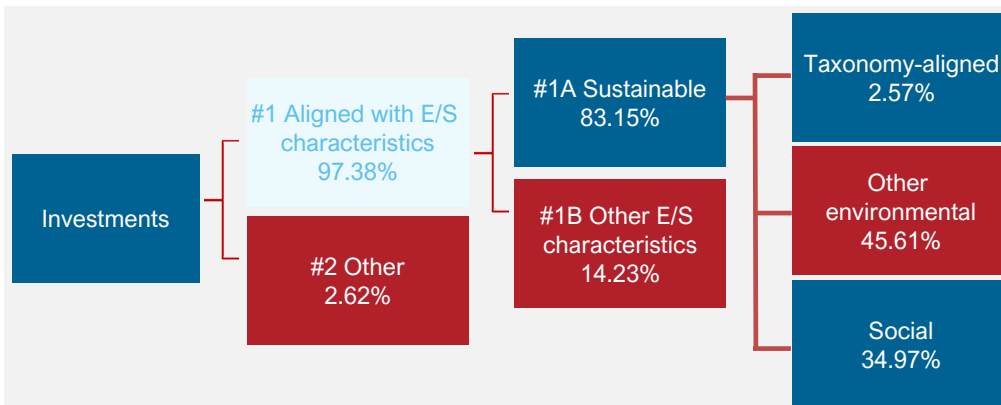

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.38%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 83.15% in sustainable investments of which 2.57% have an environmental objective (which is aligned with the EU Taxonomy), 45.61% have an environmental objective (which is not aligned with the EU Taxonomy) and 34.97% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	5.54%
Consumer Discretionary	Speciality Retail	3.75%
	Hotels Restaurants & Leisure	3.42%
	Media	1.94%
	Auto Components	1.86%
	Household Durables	1.25%
Consumer Staples	Food & Staples Retailing	4.9%
	Personal Products	3.43%
	Beverages	2.67%
	Household Products	2.18%
Energy	Oil, Gas & Consumable Fuels	3.09%
Financials	Diversified Financial Services	5.7%
	Insurance	11.19%
	Commercial Banks	10.31%
Healthcare	Pharmaceuticals	5.51%
Industrials	Professional Services	4.89%
	Machinery	4.48%
	Construction & Engineering	4.39%
	Trading Companies & Distributors	2.83%
	Electrical Equipment	1.81%
Information Technology	Software	2.24%
	IT Services	1.72%
Materials	Containers & Packaging	1.86%
	Paper & Forest Products	1.43%
Open Ended Fund	Closed Ended Cash Fund	3.87%
Utilities	Electric Utilities	2.06%
	Multi-Utilities	1.04%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.57%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.26%
- 2) climate change adaptation: 0.11%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

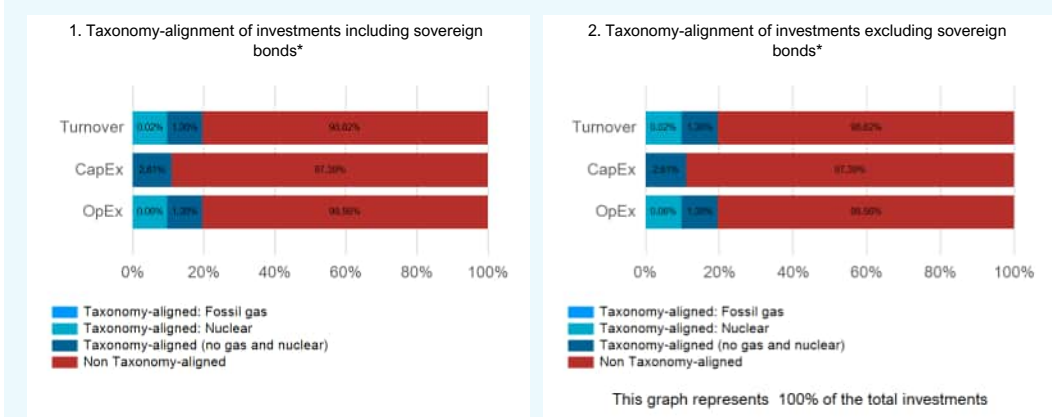

☒ Yes

☐ In fossil gas

☒ In nuclear energy

☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 1.08% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.2% based on Turnover, 4.3% based on CapEx and 3.1% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.2% based

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

on Turnover, 4.3% based on CapEx and 3.1% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.41% based on Turnover, 6.38% based on CapEx and 4.49% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.41% based on Turnover, 6.38% based on CapEx and 4.49% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 45.61%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 34.97%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - European Dividend Plus Fund

Legal entity identifier:

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 83.18% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework. The fund's approach towards promoting environmental and social characteristics was subsequently revised in accordance with the updated Fidelity Sustainable Investing Framework with effect from 28 March 2025, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024, 31 July 2024 to 27 March 2025 and additional information will be provided covering the period from 28 March 2025 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'High ESG rating', which is new data adopted between 31 July 2024 and 27 March 2025, was compiled based on the monthly average of the data between 31 July 2024 and 27 March 2025
- the data 'ESG score', which is new data as from 28 March 2025, was compiled based on the fortnightly average of the data between 28 March 2025 and 30 April 2025.
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

Between 31 July 2024 and 27 March 2025, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics ESG including product safety, supply chain, health and safety and human rights. High ESG ratings are defined as issuers rated by Fidelity ESG ratings as a B or above, or in the absence of a rating from Fidelity, an MSCI ESG rating of A or above.

As from 28 March 2025, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 80.98%

For the period 31 July 2024 - 27 March 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with high ESG ratings: 91.93%

For the period 28 March 2025 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 8.04 vs. 7.31

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 83.18%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 41.91%

iv) the percentage of the fund invested in sustainable investments with a social objective: 38.82%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.55%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 72.83%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.73%
- v) the percentage of the fund invested in sustainable investments with a social objective: 40.85%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 81.36%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 77.86%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.94%
- v) the percentage of the fund invested in sustainable investments with a social objective: 35.51%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 83.18% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Fidelity Institutional Liquidity Fund - A-ACC-EUR	Open Ended Fund	8.93%	Ireland
Ferrovial SE	Industrials	4.81%	Netherlands
3i Group	Financials	4.39%	United Kingdom
RELX	Industrials	4.26%	United Kingdom
Industria de Diseno Textil SA	Consumer Discretionary	4.14%	Spain
Unilever	Consumer Staples	4.01%	United Kingdom
UniCredit (A)	Financials	3.34%	Italy
Muenchener Rueckversicherungs-Gesellschaft AG in Muenchen	Financials	3.06%	Germany
Elisa	Communication Services	3.03%	Finland
Deutsche Boerse AG	Financials	2.84%	Germany
Allianz	Financials	2.81%	Germany
Reckitt Benckiser Group	Consumer Staples	2.71%	United Kingdom
NatWest Group	Financials	2.65%	United Kingdom
Roche Holding AG	Healthcare	2.53%	Switzerland
AIB Group	Financials	2.45%	Ireland

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 83.18% in sustainable investments.

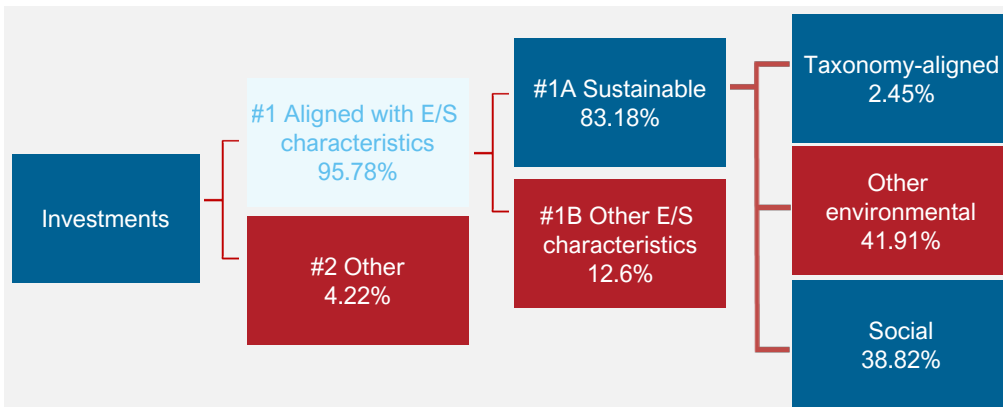

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.78%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 83.18% in sustainable investments of which 2.45% have an environmental objective (which is aligned with the EU Taxonomy), 41.91% have an environmental objective (which is not aligned with the EU Taxonomy) and 38.82% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	6.42%
Consumer Discretionary	Speciality Retail	4.14%
	Media	1.8%
	Hotels Restaurants & Leisure	1.63%
	Auto Components	1.29%
	Household Durables	0.81%
Consumer Staples	Personal Products	4.01%
	Household Products	2.71%
	Beverages	1.56%
Financials	Diversified Financial Services	7.23%
	Insurance	11.32%
	Commercial Banks	10.75%
Healthcare	Pharmaceuticals	7.09%
Industrials	Professional Services	6.4%
	Construction & Engineering	4.81%
	Machinery	4.35%
	Trading Companies & Distributors	3.08%
	Electrical Equipment	2.09%
Information Technology	IT Services	1.96%
Materials	Paper & Forest Products	1.66%
	Containers & Packaging	1.53%
Open Ended Fund	Closed Ended Cash Fund	8.93%
Utilities	Electric Utilities	1.95%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.45%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.27%
- 2) climate change adaptation: 0.13%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

additions, this year's reporting approach has been adjusted:

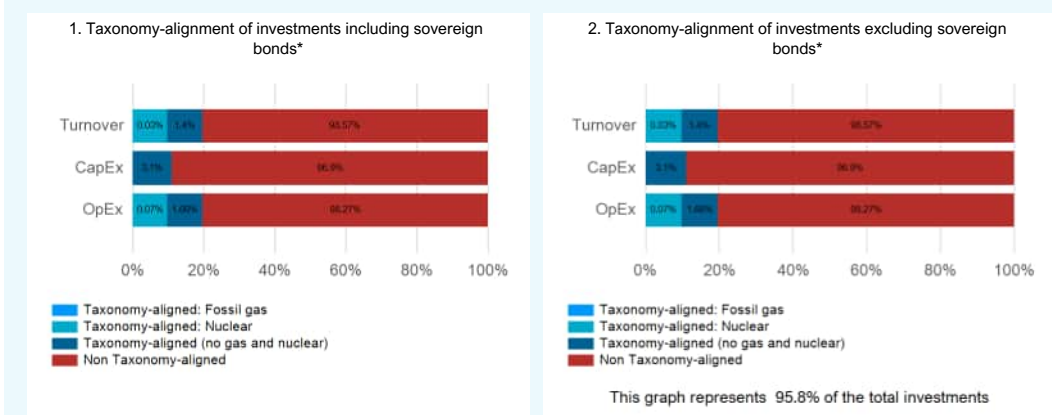

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☒ Yes
- ☐ In fossil gas ☒ In nuclear energy
- ☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.02% for transitional activities and 1.06% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.2% based on Turnover, 4.9% based on CapEx and 3.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.2% based on Turnover, 4.9% based on CapEx and 3.3% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.29% based on Turnover, 7.03% based on CapEx and 4.79%

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.29% based on Turnover, 7.03% based on CapEx and 4.79% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 41.91%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 38.82%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. Between 31 July 2024 and 27 March 2025, the fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings.
5. As from 28 March 2025, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Dividend Fund

Legal entity identifier:
549300TOZX7F2KZW XK25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 82.21% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 97.36%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.78 vs. 7.00

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 82.21%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 47.25%

iv) the percentage of the fund invested in sustainable investments with a social objective: 31.12%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.28%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 63.49%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 22.93%
- v) the percentage of the fund invested in sustainable investments with a social objective: 36.26%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 96.94%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 74.13%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 38.02%
- v) the percentage of the fund invested in sustainable investments with a social objective: 33.54%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 82.21% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Unilever	Consumer Staples	4%	United Kingdom
Muenchener Rueckversicherungs-Gesellschaft AG In Muenchen	Financials	3.92%	Germany
Fidelity Institutional Liquidity Fund - A-ACC-USD	Open Ended Fund	3.22%	Ireland
National Grid	Utilities	3.16%	United Kingdom
Iberdrola SA (A)	Utilities	3.13%	Spain
Deutsche Boerse AG	Financials	3.09%	Germany
Vinci SA (A)	Industrials	3.03%	France
Roche Holding AG	Healthcare	2.99%	Switzerland
Legrand SA (A)	Industrials	2.97%	France

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 82.21% in sustainable investments.

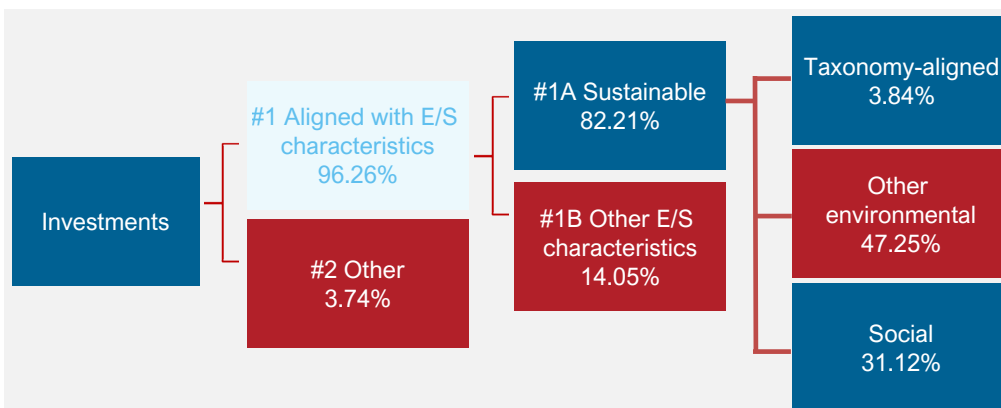

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.26%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 82.21% in sustainable investments of which 3.84% have an environmental objective (which is aligned with the EU Taxonomy), 47.25% have an environmental objective (which is not aligned with the EU Taxonomy) and 31.12% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Hotels Restaurants & Leisure	3.73%
	Speciality Retail	2.43%
	Media	1.89%
	Auto Components	1.52%
Consumer Staples	Food & Staples Retailing	5.32%
	Personal Products	5.14%
	Household Products	2.18%
Financials	Diversified Financial Services	9.68%
	Insurance	15.55%
Healthcare	Pharmaceuticals	8.04%
Industrials	Professional Services	5.24%
	Electrical Equipment	5.18%
	Machinery	3.75%
	Construction & Engineering	3.03%
	Building Products	2.5%
Information Technology	Semiconductor Equipment & Products	4.29%
	Communications Equipment	1.58%
	Computers & Peripherals	1.32%
Materials	Containers & Packaging	1.91%
	Paper & Forest Products	1.59%
Open Ended Fund	Closed Ended Cash Fund	3.22%
Utilities	Electric Utilities	4.67%
	Multi-Utilities	3.93%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 3.84%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.76%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

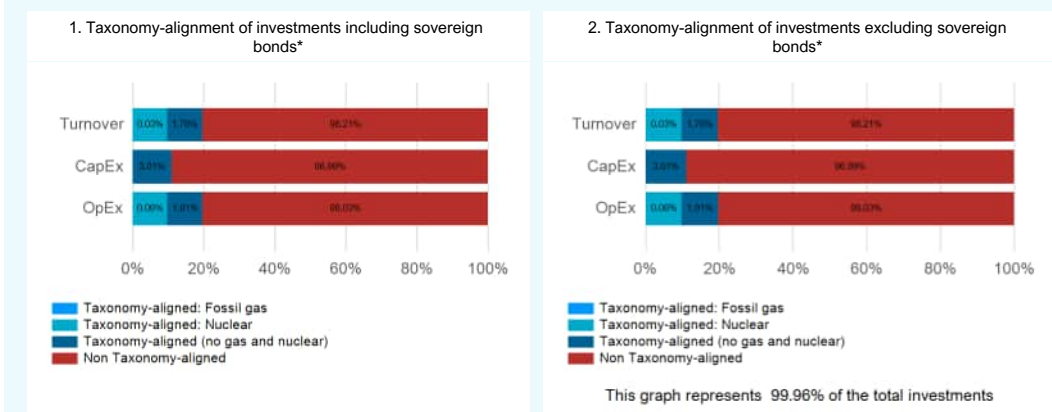

☒ Yes

☐ In fossil gas

☒ In nuclear energy

☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 1.45% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.6% based on Turnover, 3.3% based on CapEx and 2.8% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.6% based on Turnover, 3.3% based on CapEx and 2.8% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.34% based on Turnover, 5.45% based on CapEx and 4.15% based on OpEx. The quarterly average share of sustainable investments (excluding

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.34% based on Turnover, 5.45% based on CapEx and 4.15% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 47.25%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 31.12%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Dividend Plus Fund

Legal entity identifier:
549300OZL7XSDZJCL571

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 77.35% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'High ESG rating', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics ESG including product safety, supply chain, health and safety and human rights. High ESG ratings are defined as issuers rated by Fidelity ESG ratings as a B or above, or in the absence of a rating from Fidelity, an MSCI ESG rating of A or above.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 80.39%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with high ESG ratings: 92.58%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 77.35%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 43.45%

iv) the percentage of the fund invested in sustainable investments with a social objective: 31.93%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.1%

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 65.31%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 27.33%

v) the percentage of the fund invested in sustainable investments with a social objective: 35.91%

For the period 1 May 2023 - 30 April 2024, for the previous reference period, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.32%

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 73.43%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 42%

v) the percentage of the fund invested in sustainable investments with a social objective: 29.7%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 77.35% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 77.35% in sustainable investments.

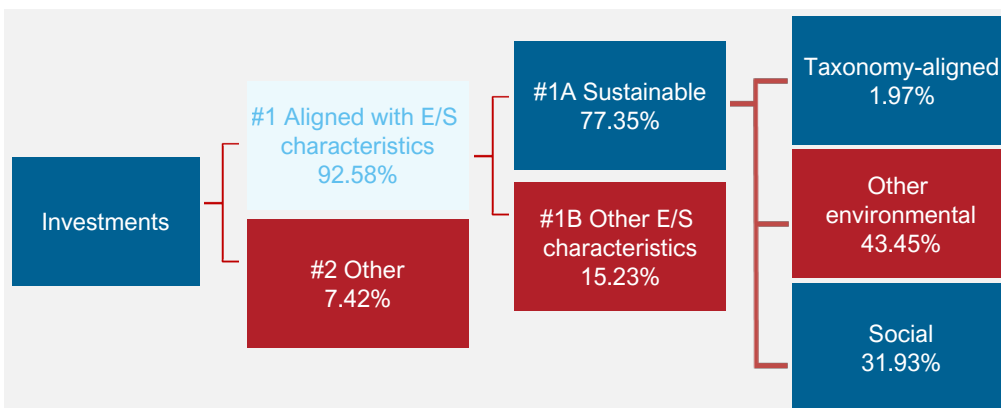

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 92.58%, which corresponds to the proportion of fund invested in securities with high ESG ratings. This included 77.35% in sustainable investments of which 1.97% have an environmental objective (which is aligned with the EU Taxonomy), 43.45% have an environmental objective (which is not aligned with the EU Taxonomy) and 31.93% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	5.62%
Consumer Discretionary	Speciality Retail	3.39%
	Auto Components	3.07%
	Media	1.89%
	Hotels Restaurants & Leisure	1.79%
	Household Durables	1.23%
	Textiles & Apparel	0.47%
Consumer Staples	Household Products	4.29%
	Personal Products	3.69%
	Food Products	1.48%
Financials	Diversified Financial Services	9%
	Commercial Banks	7.7%
	Insurance	11.82%

Utilities	Electric Utilities	1.92%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.97%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.04%
- 2) climate change adaptation: 0.09%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

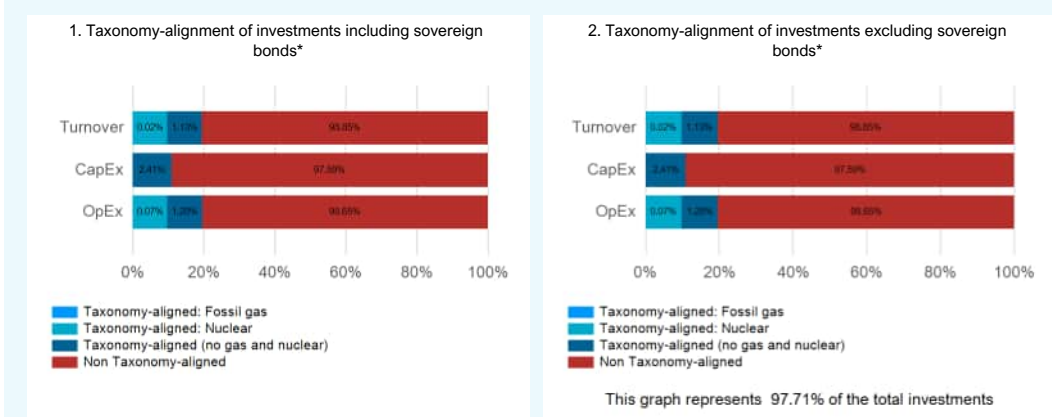

☒ Yes

☐ In fossil gas

☒ In nuclear energy

☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 0.85% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.6% based on Turnover, 3.5% based on CapEx and 2.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.6% based

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

on Turnover, 3.5% based on CapEx and 2.4% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.51% based on Turnover, 5.33% based on CapEx and 3.67% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.51% based on Turnover, 5.33% based on CapEx and 3.67% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 43.45%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 31.93%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Equity Income Fund

549300NJ0LHMXL00MG36

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 70.34% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 91.70%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 8.16 vs. 7.00

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 70.34%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 36.59%

iv) the percentage of the fund invested in sustainable investments with a social objective: 31.64%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 95.17%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 56.16%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 18.01%
- v) the percentage of the fund invested in sustainable investments with a social objective: 35.66%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 96.03%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 62.6%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 31.86%
- v) the percentage of the fund invested in sustainable investments with a social objective: 29.38%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 70.34% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Muenchener Rueckversicherungs-Gesellschaft AG In Muenchen	Financials	4.7%	Germany

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 70.34% in sustainable investments.

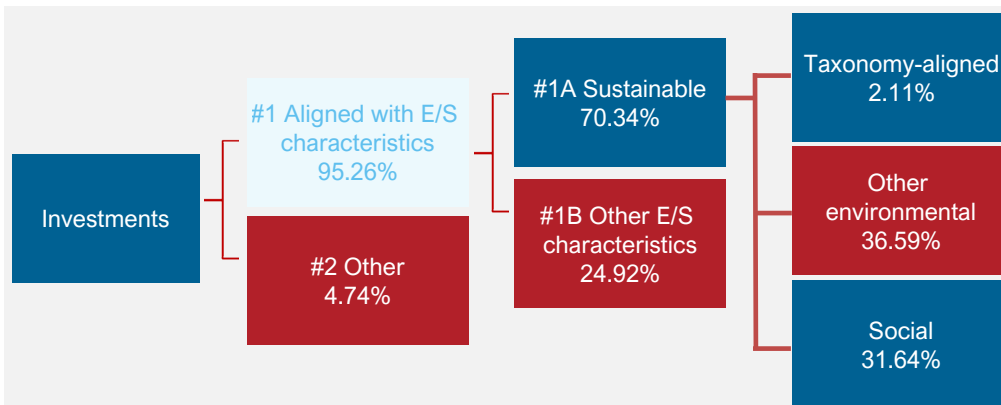

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.26%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 70.34% in sustainable investments of which 2.11% have an environmental objective (which is aligned with the EU Taxonomy), 36.59% have an environmental objective (which is not aligned with the EU Taxonomy) and 31.64% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Speciality Retail	2.97%
	Media	2.29%
	Hotels Restaurants & Leisure	2.25%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.11%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.07%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

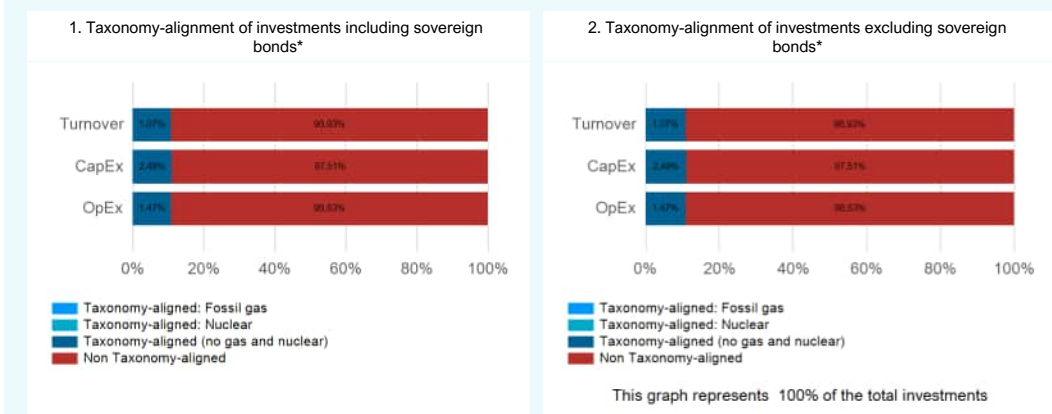

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.77% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.9% based on Turnover, 0.9% based on CapEx and 0.5% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.9% based on Turnover, 0.9% based on CapEx and 0.5% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.07% based on Turnover, 3.95% based on CapEx and 2.78% based on OpEx. The quarterly average share of sustainable investments (excluding

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.07% based on Turnover, 3.95% based on CapEx and 2.78% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 36.59%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 31.64%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'High ESG rating', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics ESG including product safety, supply chain, health and safety and human rights. High ESG ratings are defined as issuers rated by Fidelity ESG ratings as a B or above, or in the absence of a rating from Fidelity, an MSCI ESG rating of A or above.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 93.82%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with high ESG ratings: 90.75%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 75.48%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 38.94%

iv) the percentage of the fund invested in sustainable investments with a social objective: 34.51%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 93.93%

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 57.25%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 18.54%

v) the percentage of the fund invested in sustainable investments with a social objective: 36.54%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 96.78%

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 66.59 %

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32 %

v) the percentage of the fund invested in sustainable investments with a social objective: 34.07%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 75.48% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Muenchener Rueckversicherungs-Gesellschaft AG in Muenchen	Financials	4.9%	Germany

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The fund invested 75.48% in sustainable investments.

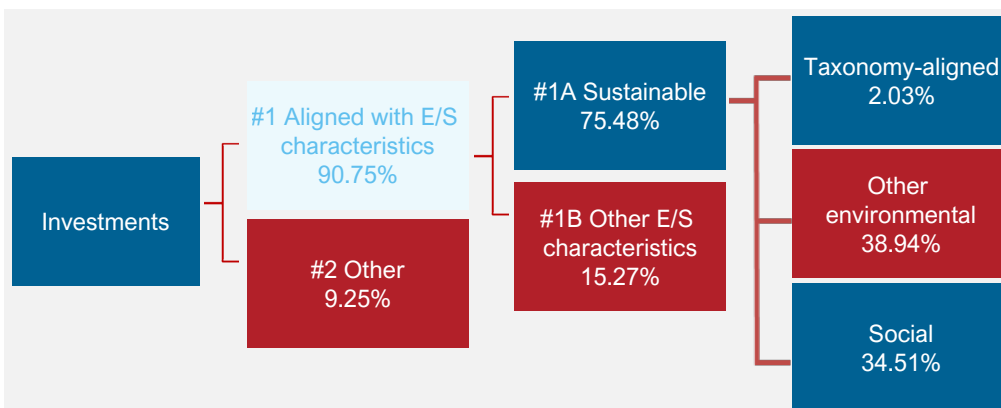

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 75.48% , which corresponds to the proportion of fund invested in sustainable investments. This included 2.03% have an environmental objective (which is aligned with the EU Taxonomy), 38.94% have an environmental objective (which is not aligned with the EU Taxonomy) and 34.51% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Speciality Retail	3.02%
	Media	2.34%
	Hotels Restaurants & Leisure	2.29%
	Auto Components	1.83%
Consumer Staples	Personal Products	4.37%
	Household Products	2.64%

	Commercial Banks	2.27%
	Diversified Financial Services	10.05%
Healthcare	Pharmaceuticals	5.46%
Industrials	Professional Services	9.55%
	Trading Companies & Distributors	3.3%
	Electrical Equipment	2.7%
	Construction & Engineering	2.66%
	Machinery	1.32%
	Air Freight & Couriers	1.3%
Information Technology	Semiconductor Equipment & Products	3.84%
	Communications Equipment	2.13%
Materials	Chemicals	7.31%
Open Ended Fund	Closed Ended Cash Fund	3.53%
Utilities	Electric Utilities	4.18%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.03%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.07%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted: For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30

among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

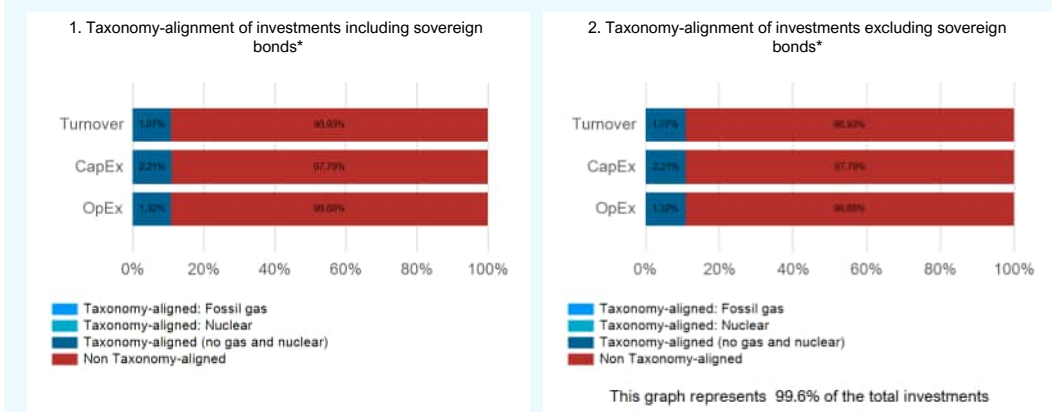

April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.77% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.1% based on Turnover, 0.4% based on CapEx and 0.2% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.1% based on Turnover, 0.4% based on CapEx and 0.2% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.94% based on Turnover, 3.37% based on CapEx and 2.48% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.94% based on Turnover, 3.37% based on CapEx and 2.48% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 38.94%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 34.51%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by investing in securities of issuers with high ESG ratings.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 78.59%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 93.37%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 42.49%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 24.26%

iv) the percentage of the fund invested in sustainable investments with a social objective: 16.15%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 71.75%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 18.9%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.19%
- v) the percentage of the fund invested in sustainable investments with a social objective: 8.78%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 78.13%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 27.7%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 15.24%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.94%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 42.49% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Italy 2.95% 01/07/2030	Government	6.53%	Italy

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 42.49% in sustainable investments.

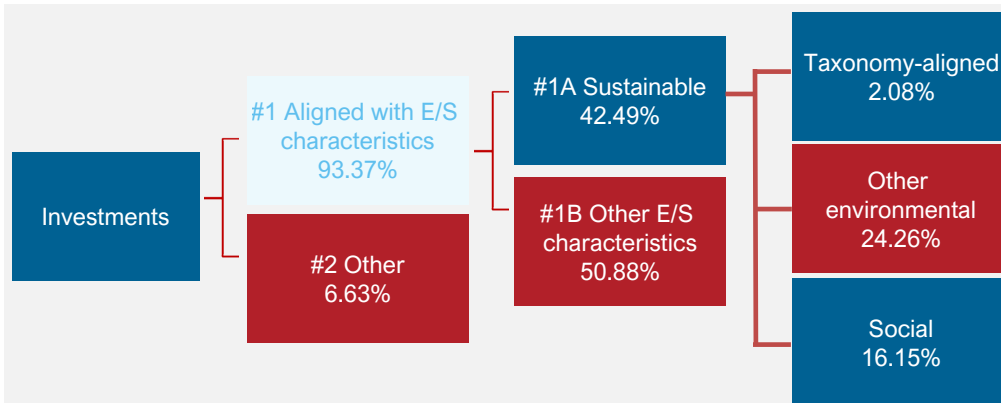

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.37%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 42.49% in sustainable investments of which 2.08% have an environmental objective (which is aligned with the EU Taxonomy) and 24.26% have an environmental objective (which is not aligned with the EU Taxonomy) and 16.15% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.08%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.82%
- 2) climate change adaptation: 0.03%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of: **-turnover** reflecting the share of revenue from green activities of

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

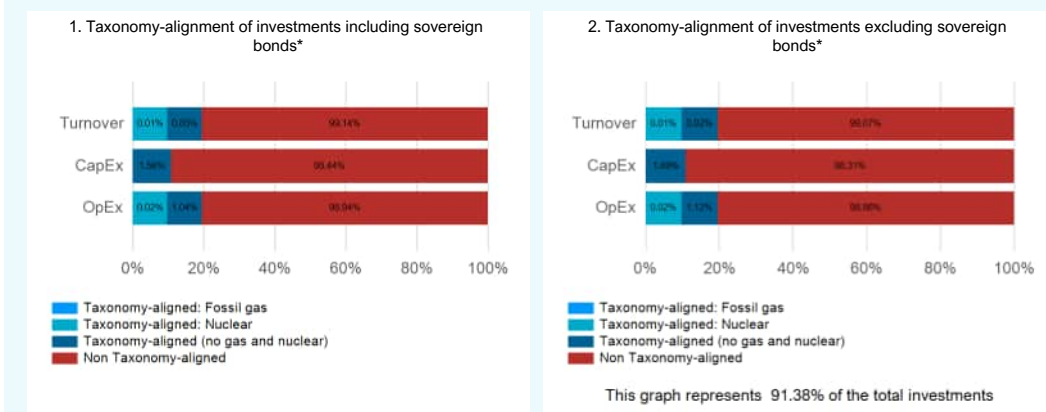

☒ Yes

☐ In fossil gas

☒ In nuclear energy

☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.62% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.9% based on Turnover, 6.3% based on CapEx and 4.6% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.5% based on Turnover, 7.4% based on CapEx and 5.4% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.76% based on Turnover, 3.35% based on CapEx and 2.43% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.13% based on Turnover, 4.05% based on CapEx and 2.93% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 24.26%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 16.15%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The fund was uplift to Article 8 on 28 March 2025. The fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

The fund was uplift to Article 8 on 28 March 2025. For the period 28 March 2025 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 80.49%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.12 % (based on data of at 31 March 2025). The fund changed its investment strategy on 28 March 2025 by promoting environmental and social characteristics. On 31 March 2025, one of the underlying funds purchased securities that are subject to the Fidelity ESG Tilt exclusions. This has been remediated by 4 April 2025 in the interest of the shareholders.
- iii) the percentage of the fund invested in sustainable investments: 18.66%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 11%
- v) the percentage of the fund invested in sustainable investments with a social objective: 7.39%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

The fund was uplift to Article 8 on 28 March 2025. This question is not applicable as this is the fund's first reporting period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 18.66% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

- (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
- (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 28/03/2025 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 18.66% in sustainable investments.

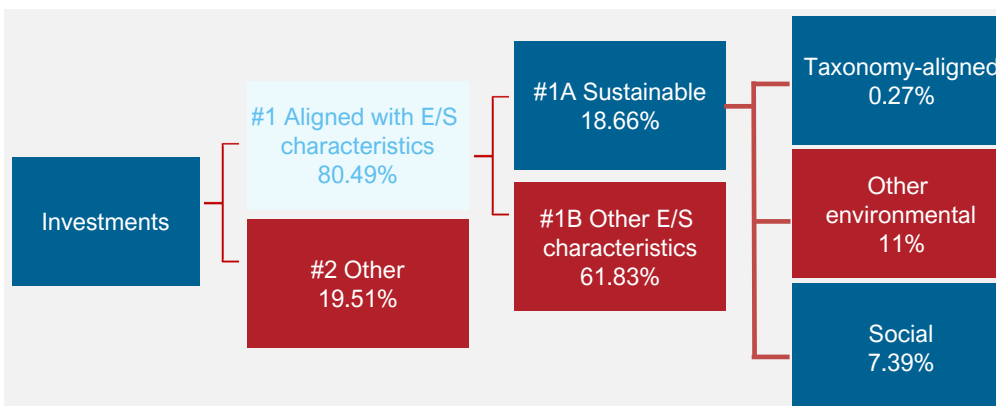

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 80.49%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 18.66% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 11% have an environmental objective (which is not aligned with the EU Taxonomy) and 7.39% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.36%
- 2) climate change adaptation: 0.01%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

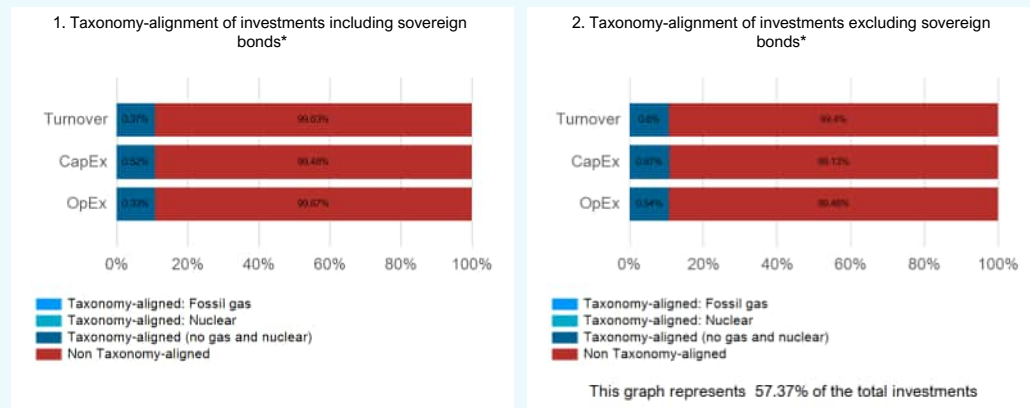

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.18% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund was uplift to Article 8 on 28 March 2025. This question is not applicable as this is the fund's first reporting period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 7.39%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
2. The fund has applied the Exclusions.
3. the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The fund was uplift to Article 8 on 28 March 2025. The fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

The fund was uplift to Article 8 on 28 March 2025. For the period 28 March 2025 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 78.65%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 15.75% (based on data as at 28 March 2025). The fund changed its investment strategy on 28 March 2025 by promoting environmental and social characteristics. On this date, there were remaining exposure to Tobacco and Thermal Coal exclusions. This has been remediated by 31 March 2025 in the interest of the shareholders.
- iii) the percentage of the fund invested in sustainable investments: 24.98%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 14.81%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.85%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

The fund was uplift to Article 8 on 28 March 2025. This question is not applicable as this is the fund's first reporting period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 24.98% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 28/03/2025 - 30/04/2025

Largest investments	Sector	% Assets	Country

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 24.98% in sustainable investments.

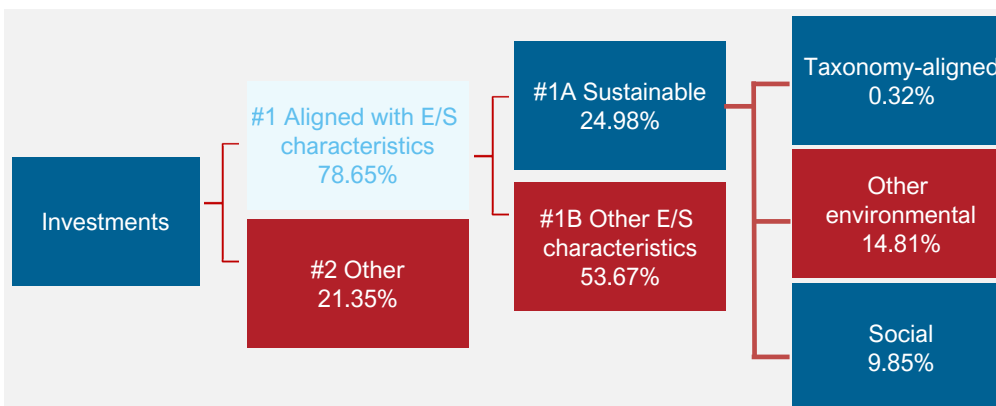

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 78.65%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 24.98% in sustainable investments of which 0.32% have an environmental objective (which is aligned with the EU Taxonomy) and 14.81% have an environmental objective (which is not aligned with the EU Taxonomy) and 9.85% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.32%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.28%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

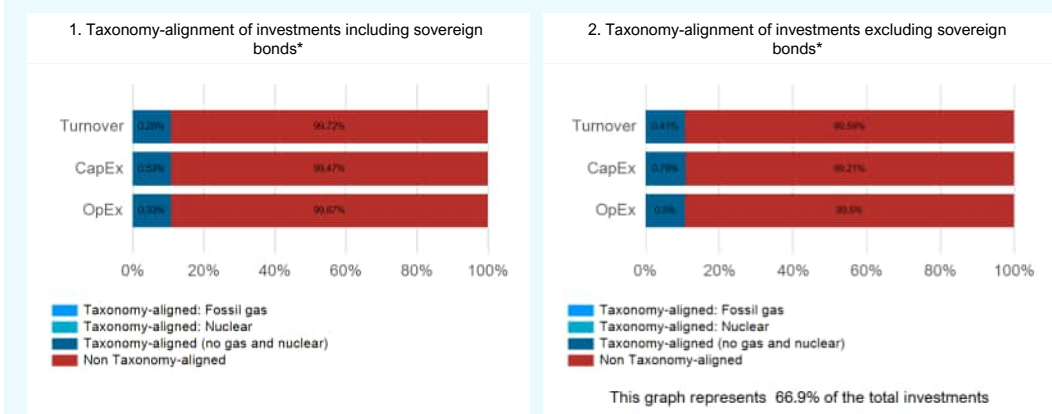

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.15% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund was uplift to Article 8 on 28 March 2025. This question is not applicable as this is the fund's first reporting period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 14.81%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 9.85%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
2. The fund has applied the Exclusions.
3. the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Multi Asset Income Fund

Legal entity identifier:
549300ISMCTFO21OMK36

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 33.17% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 77.23%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 90.84%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 33.17%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 18.84%

iv) the percentage of the fund invested in sustainable investments with a social objective: 12.01%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 74.76%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 17.35%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 7.26%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.3%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 78.23%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 22.42%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 11.42%
- v) the percentage of the fund invested in sustainable investments with a social objective: 8.95%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 33.17% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 33.17% in sustainable investments.

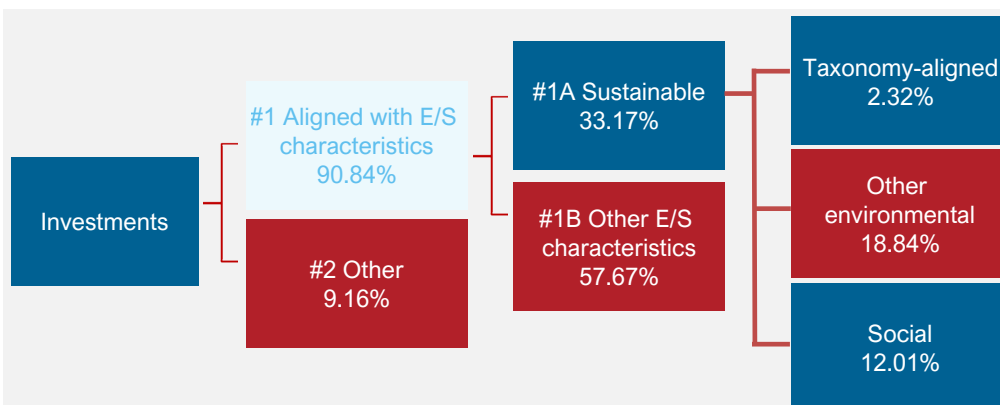

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.84%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 33.17% in sustainable investments of which 2.32% have an environmental objective (which is aligned with the EU Taxonomy) and 18.84% have an environmental objective (which is not aligned with the EU Taxonomy) and 12.01% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production,

processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.32%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.58%
- 2) climate change adaptation: 0.01%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

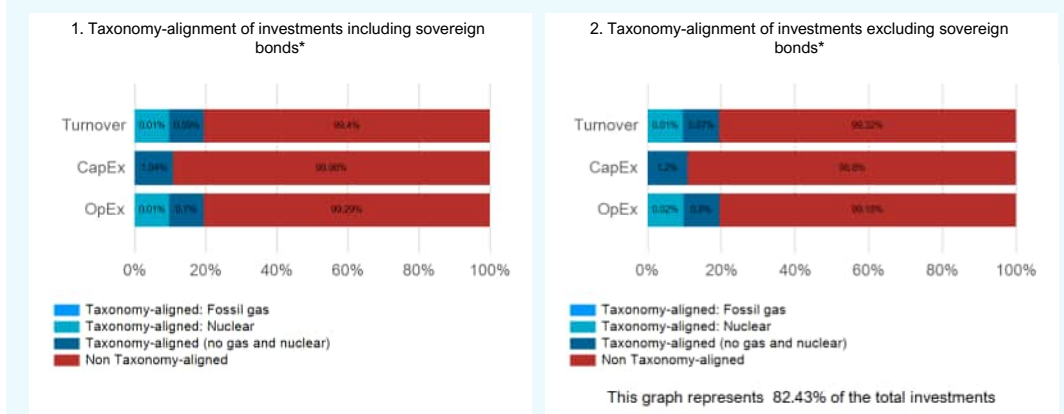

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☒ Yes
- ☐ In fossil gas ☒ In nuclear energy
- ☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.43% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.7% based on Turnover, 2.3% based on CapEx and 1.7% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.4% based on Turnover, 3.2% based on CapEx and 2.4% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.83% based on Turnover, 1.33% based on CapEx and 0.99% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.14% based on Turnover, 1.83% based on CapEx and 1.35% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 18.84%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 12.01%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Multi Asset Income ESG Fund

Legal entity identifier:
549300GG6X1NDTLYIF66

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 39.86% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 90% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 79.70%
- (ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 93.75%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- ii) the percentage of the fund invested in sustainable investments: 39.86%
- iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 23.2%
- iv) the percentage of the fund invested in sustainable investments with a social objective: 14.55%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 81.17%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 23.71%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 11.55%
- v) the percentage of the fund invested in sustainable investments with a social objective: 10.68%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 81.78%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 29.39%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 15.53%
- (v) the percentage of the fund invested in sustainable investments with a social objective: 11.7%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 39.86% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as:

- (a) investments in securities of issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

Regarding the EU Taxonomy, this contributed to the environmental objectives of climate change mitigation and climate change adaptation.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Neuberger Berman Short Duration High Yield Engagement Fund	Open Ended Fund	5.06%	USD

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 39.86% in sustainable investments.

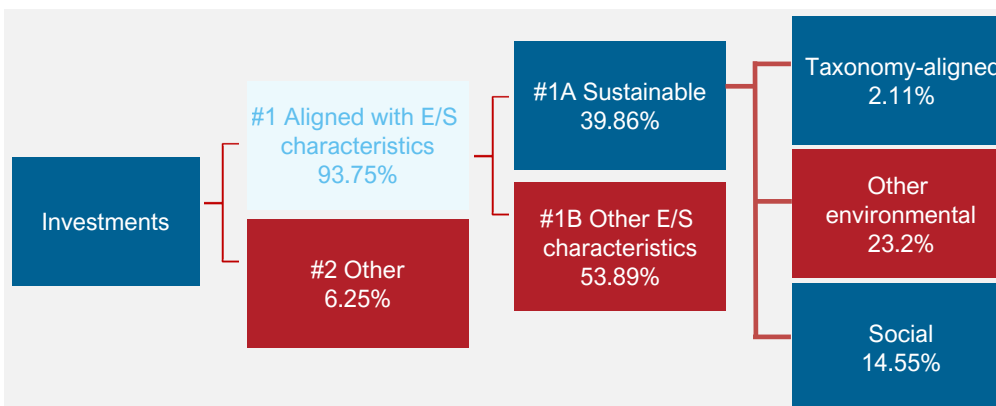

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.75%, which corresponds to the proportion of fund by complying with the Fidelity multi asset ESG criteria. This included 39.86% in sustainable investments of which 2.11% have an environmental objective (which is aligned with the EU Taxonomy), 23.2% have an environmental objective (which is not aligned with the EU Taxonomy) and 14.55% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.11%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.56%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

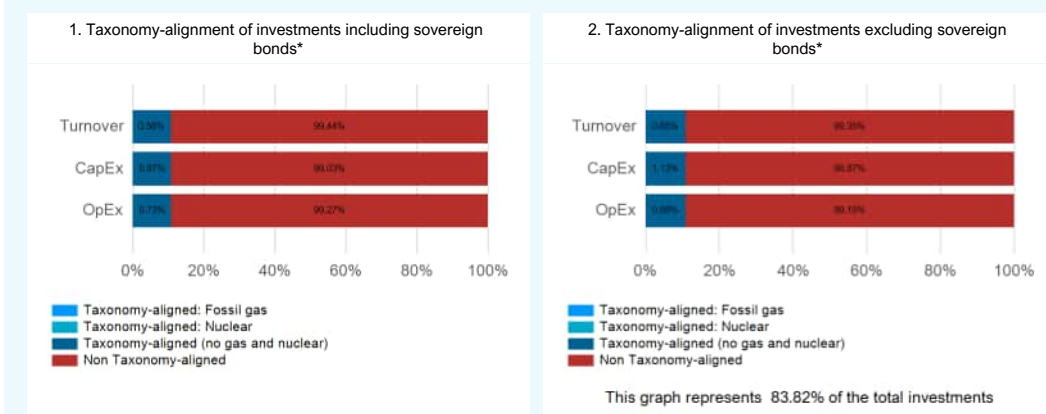

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 0.44% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.8% based on Turnover, 1.8% based on CapEx and 1.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.1% based on Turnover, 2.1% based on CapEx and 1.5% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.04% based on Turnover, 1.27% based on CapEx and 1% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.27% based on Turnover, 1.55% based on CapEx and 1.22% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 23.2%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 14.55%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Asia Pacific Bond ESG Fund

<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than that of its benchmark, after excluding 20% of assets with the lowest ESG ratings. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.43%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund measured against the ESG score of its benchmark excluding 20% of assets with the lowest ESG ratings: 6.84 vs. 6.76

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 30.12%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 18.48%

iv) the percentage of the fund invested in sustainable investments with a social objective: 10.23%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 90.23%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 26.98%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 12.51%
- v) the percentage of the fund invested in sustainable investments with a social objective: 14.47%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 88.56%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 22.17%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 12.48%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.68%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 30.12% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Asset allocation
describes the share of
investments in specific
assets.

What was the proportion of sustainability-related investments?

The fund invested 30.12% in sustainable investments.

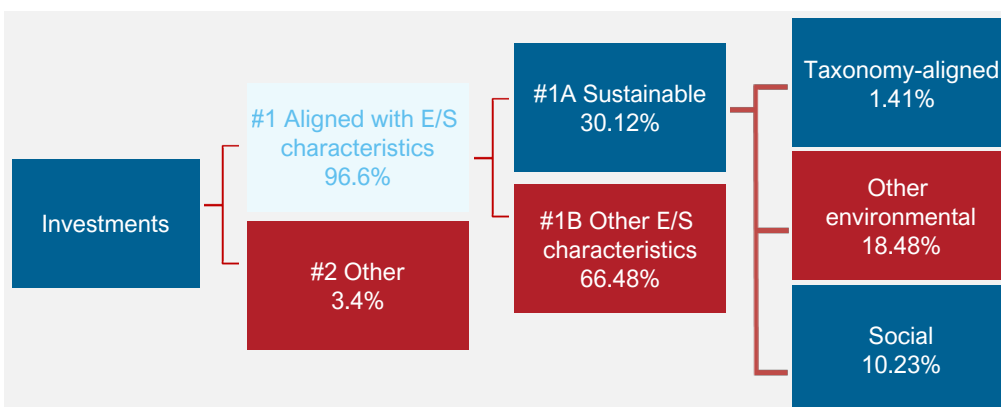

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.6%, which corresponds to the proportion of fund by achieving an ESG score of its portfolio greater than that of its benchmark, after excluding 20% of securities with the lowest ESG rating. This included 30.12% in sustainable investments of which 1.41% have an environmental objective (which is aligned with the EU Taxonomy), 18.48% have an environmental objective (which is not aligned with the EU Taxonomy) and 10.23% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Wireless Telecommunication Services	2.11%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.41%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.41%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

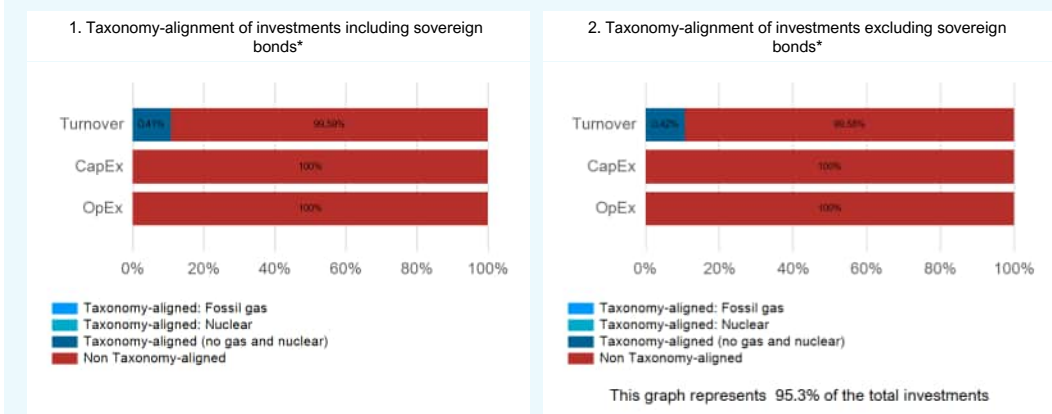

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.1% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.1% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.06% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

bonds) with an environmental objective aligned with the EU Taxonomy was 1.12% based on Turnover, 0% based on CapEx and 0% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 18.48%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 10.23%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than that of its benchmark, after excluding 20% of assets with the lowest ESG ratings.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 11.58% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe. The investment universe comprises a blend of the CNHJ Index (ICE BofA China Offshore Broad Market Index), the G0CN Index (ICE BofA China Government Index) and the CN0C Index (ICE BofA China Corporate Index).

ESG scores were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values are aggregated to determine the average ESG score of the portfolio and that of the investment universe.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the fund's investment universe using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 74.78%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of the fund's investment universe: 6.02 vs. 4.88

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 11.58%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 8.29%

iv) the percentage of the fund invested in sustainable investments with a social objective: 3.15%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 77.54%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 10.55%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.09%
- v) the percentage of the fund invested in sustainable investments with a social objective: 5.47%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 76.4%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 5.35%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 4.12%
- v) the percentage of the fund invested in sustainable investments with a social objective: 1.23%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 11.58% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 11.58% in sustainable investments.

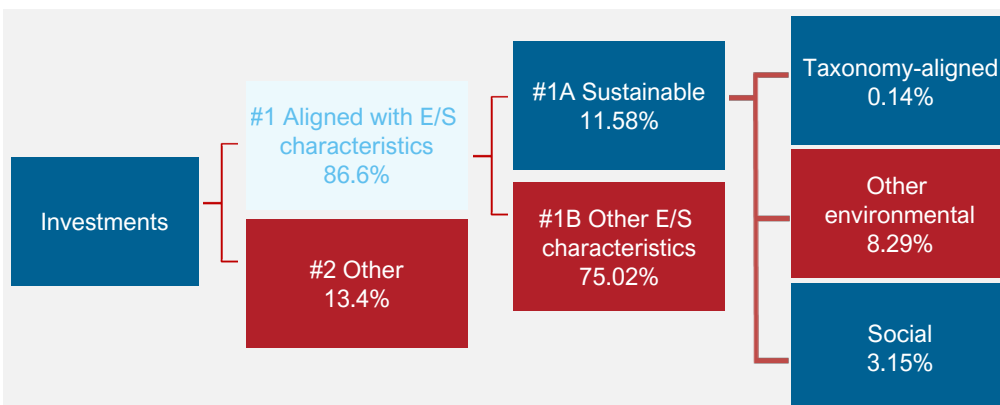

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 86.6%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 11.58% in sustainable investments of which 0.14% have an environmental objective (which is aligned with the EU Taxonomy), 8.29% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.15% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.14%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.07%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other

activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

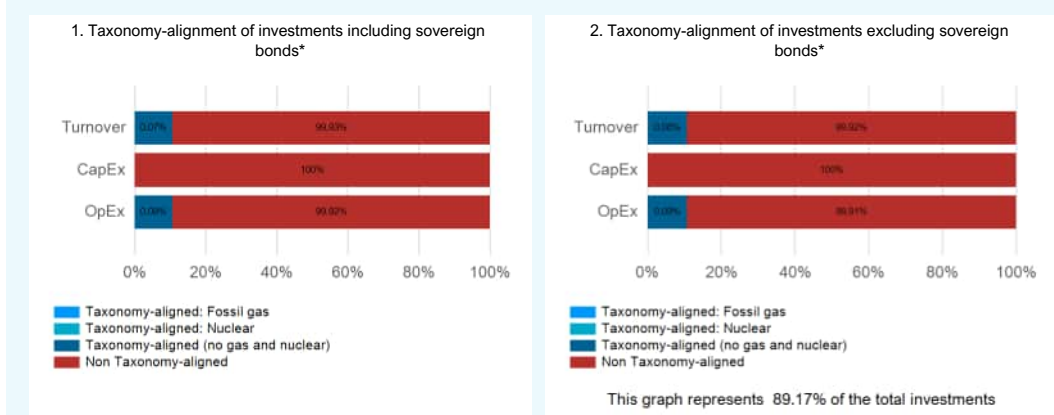

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.1% based

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

on Turnover, 0.0% based on CapEx and 0.0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.04% based on Turnover, 0.1% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.06% based on Turnover, 0.13% based on CapEx and 0.0% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.29%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.15%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Climate Transition Bond Fund

Legal entity identifier:
549300L1AKMJ4PE06T04

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 78.72% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'alignment to sustainability theme', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promotes environmental and social characteristics by investing in bonds or bonds of issuers that are supporting the climate transition through investments which

- (i) contribute to climate objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”);
- (ii) use bond proceeds to finance projects benefiting environmental or climate-related sustainability;
- (iii) aim to improve management of climate-related risks and opportunities.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 88.05%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund used to meet the environmental or social characteristics promoted by the fund: 83.23%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- ii) the percentage of the fund invested in sustainable investments: 78.72%
- iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 4.38%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 58.2%
- v) the percentage of the fund invested in sustainable investments with a social objective: 16.14%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 89.85%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 38.74%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 4.6%
- v) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 22.06%
- vi) the percentage of the fund invested in sustainable investments with a social objective: 12.09%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.54 %
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 47.5%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 2.69%
- v) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 30.11 %
- vi) the percentage of the fund invested in sustainable investments with a social objective: 14.7%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 78.72% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 78.72% in sustainable investments.

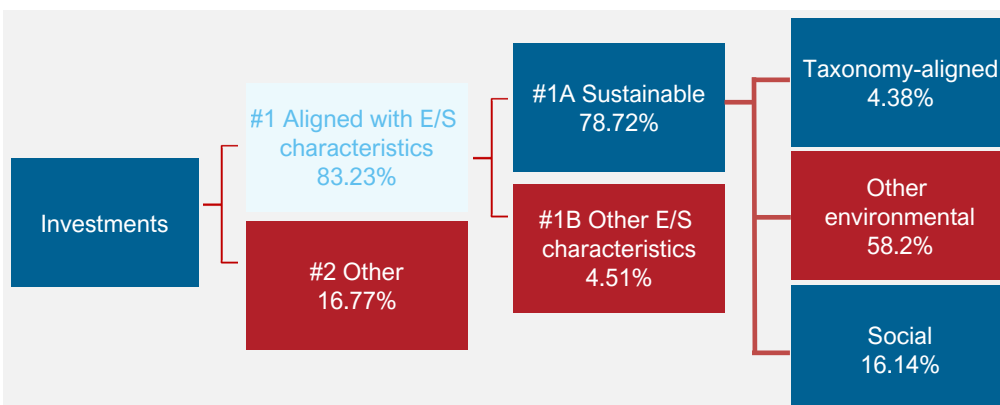

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 78.72% , which corresponds to the proportion of fund invested in sustainable investments. This included 4.38% have an environmental objective (which is aligned with the EU Taxonomy), 58.2% have an environmental objective (which is not aligned with the EU Taxonomy) and 16.14% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the

financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 4.38%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 2.89%
- 2) climate change adaptation: 0.01%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes

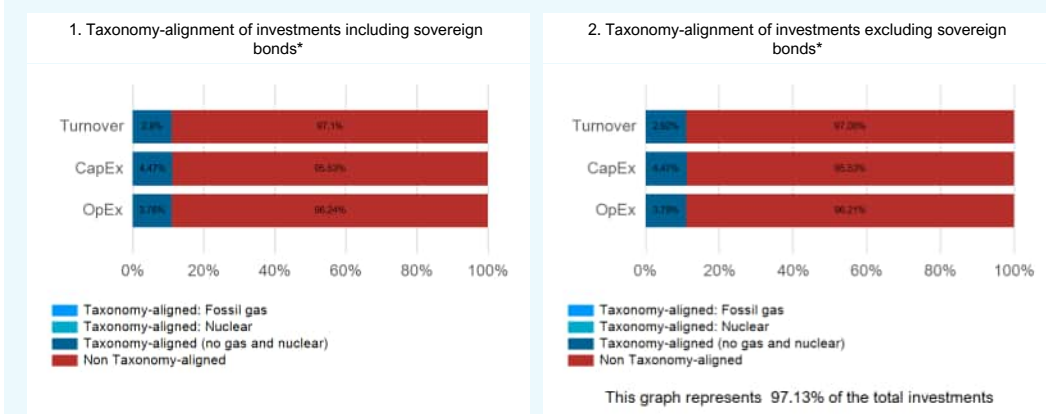

☐ In fossil gas

☐ In nuclear energy

☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.05% for transitional activities and 2.44% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.4% based on Turnover, 3.8% based on CapEx and 3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.6% based on Turnover, 4% based on CapEx and 3.1% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.05% based on Turnover, 2.5% based on CapEx and 2.14% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.21% based on Turnover, 2.67% based on CapEx and 2.29% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 58.2%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 16.14%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aligning to the fund's sustainability theme.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Emerging Market Corporate
Debt Fund

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 23.96% of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 73.75%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 5.67 vs. 5.42

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 23.96%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 15.06%

iv) the percentage of the fund invested in sustainable investments with a social objective: 8.51%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 68.15%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 17.89%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 7.44%
- v) the percentage of the fund invested in sustainable investments with a social objective: 10.45%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 68.2%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 16.69%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 8.6%
- v) the percentage of the fund invested in sustainable investments with a social objective: 8.09%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 23.96% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 23.96% in sustainable investments.

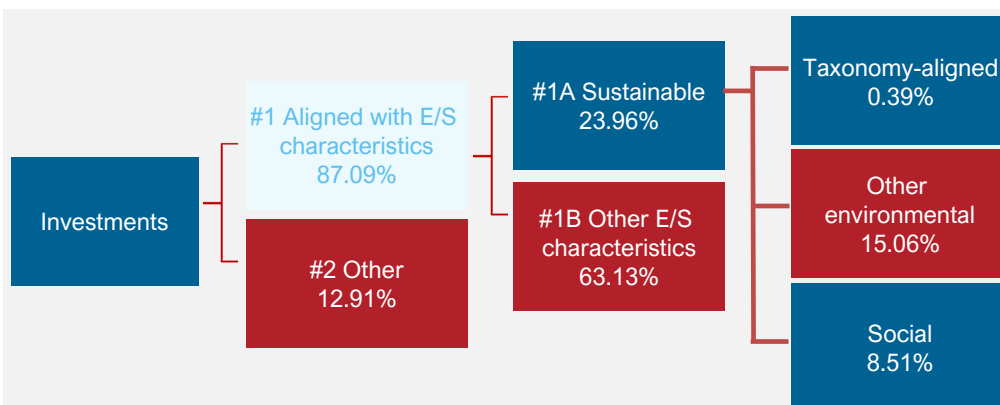

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.09%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 23.96% in sustainable investments of which 0.39% have an environmental objective (which is aligned with the EU Taxonomy), 15.06% have an environmental objective (which is not aligned with the EU Taxonomy) and 8.51% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Wireless Telecommunication Services	1.5%
	Diversified Telecommunication Services	1.21%
Consumer Discretionary	Hotels Restaurants & Leisure	4.89%
	Multiline Retail	3.11%
	Automobiles	2.55%
	Speciality Retail	2.25%
	Auto Components	0.83%
	Household Durables	0.44%
	Distributors	0.35%

	Multi-Utilities	1.27%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.39%. This contributed to the following environmental objectives:

1) climate change mitigation: 0%

power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

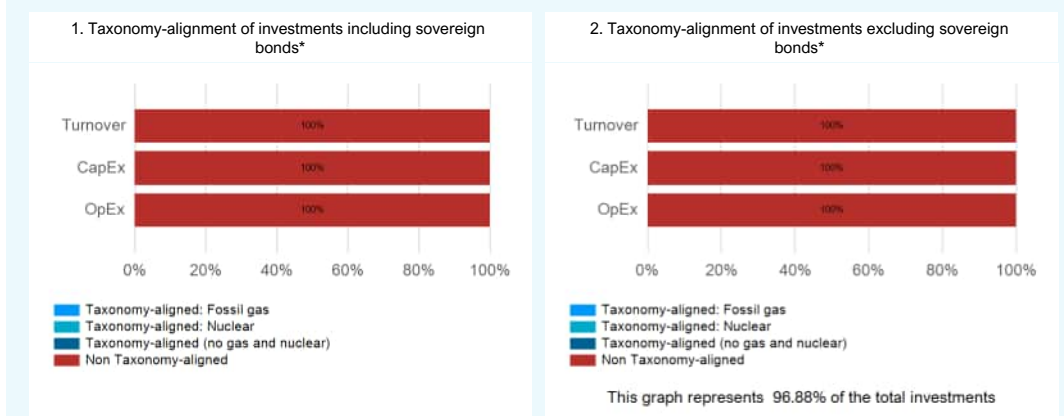

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities,

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.2% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.2% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.01% based on Turnover, 0.01% based on CapEx and 0.01% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.01% based on Turnover, 0.01% based on CapEx and 0.01% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.06%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 8.51%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Emerging Market Debt Fund

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 62.03%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 4.42 vs. 4.22
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 60.98%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 64.09%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

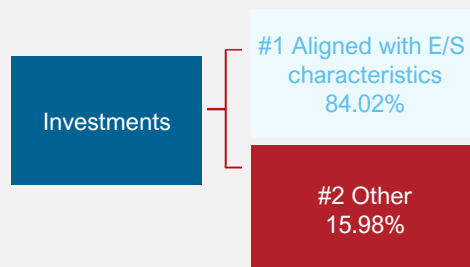

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 84.02%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	0.42%
Consumer Discretionary	Multiline Retail	0%
Consumer Staples	Food Products	0.49%
Energy	Oil, Gas & Consumable Fuels	3.55%
	Energy Equipment & Services	0.33%
	Government	0.12%
Financials	Commercial Banks	6.19%
	Diversified Financial Services	2.91%
Government	Government	74.35%
	Bonds	0.72%
Industrials	Road & Rail	0.1%
Materials	Metals & Mining	0.59%
	Copper	0.23%
	Paper & Forest Products	0%
Open Ended Fund	Closed Ended Cash Fund	7.17%
Utilities	Electric Utilities	0.13%
	Water Utilities	0.07%

Source of data: Fidelity International, as at 30 September 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the

criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.2% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.01% based on Turnover, 0.01% based on CapEx and 0.01% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.03% based on Turnover, 0.03% based on CapEx and 0.02% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 91.84%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 5.31 vs. 4.75
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 93.29%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 95.37%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025.

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.97%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Financials	Commercial Banks	8.08%
Government	Government	88.59%
Open Ended Fund	Closed Ended Cash Fund	2.09%

Source of data: Fidelity International, as at 30 April 2025.

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

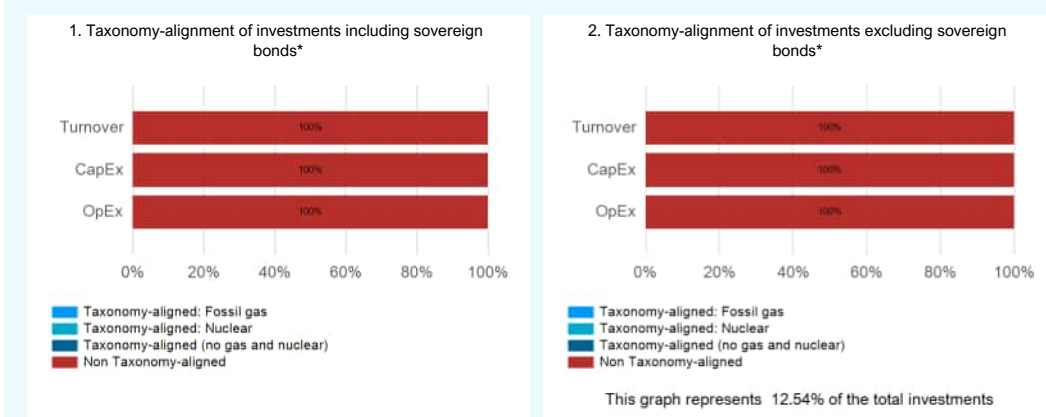

April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 76.94%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 5.11 vs. 4.82
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 70.62%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 77.16%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 80.82%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	0.3%
Consumer Discretionary	Multiline Retail	0%
Consumer Staples	Food Products	0.3%
Energy	Oil, Gas & Consumable Fuels	1.02%

Open Ended Fund	Closed Ended Cash Fund	9.33%

Source of data: Fidelity International, as at 30 April 2025.

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the

objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

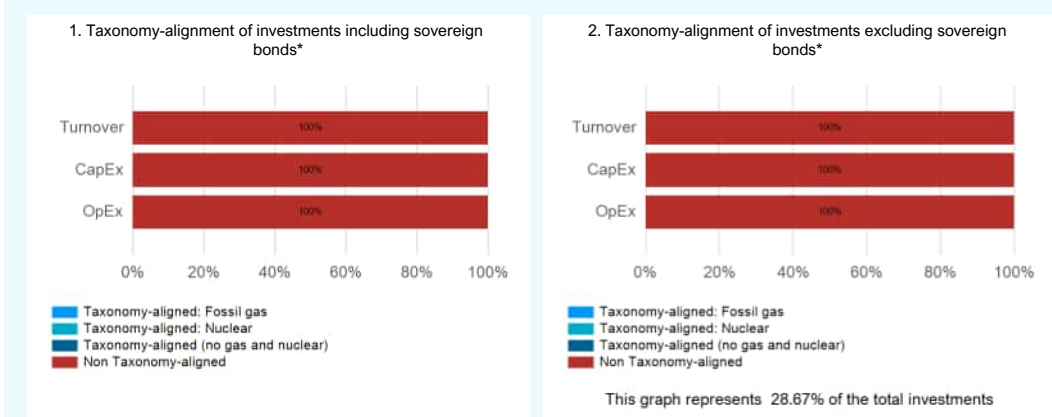

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.1% based on Turnover, 0% based on CapEx and 0% based on

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.2% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.01% based on Turnover, 0.01% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.02% based on Turnover, 0.02% based on CapEx and 0.01% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

---	--

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 91.35%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.49 vs. 6.86

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 30.61%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 16.71%

iv) the percentage of the fund invested in sustainable investments with a social objective: 12.56%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 83.53%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 13.94%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.22%
- v) the percentage of the fund invested in sustainable investments with a social objective: 7.22%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.32%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 24.97%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 12.9%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.33%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 30.61% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Germany Bundesanleihe 2.50% 15/02/2035	Government	20%	Germany

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation
describes the share of
investments in specific
assets.

What was the proportion of sustainability-related investments?

The fund invested 30.61% in sustainable investments.

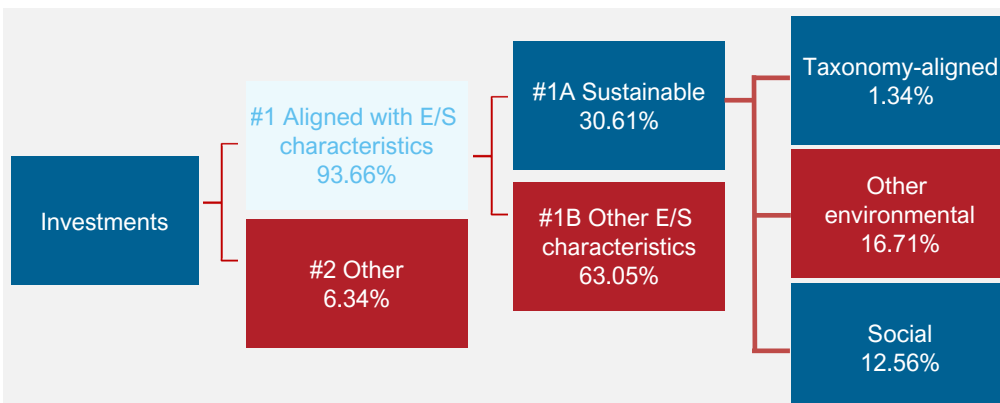

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 30.61% ,which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 1.34% have an environmental objective (which is aligned with the EU Taxonomy), 16.71% have an environmental objective (which is not aligned with the EU Taxonomy) and 12.56% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Staples	Food & Staples Retailing	1.11%
Energy	Oil, Gas & Consumable Fuels	2.52%
Financials	Diversified Financial Services	2.22%
	Consumer Finance	1.11%
Government	Government	64.64%
Healthcare	Pharmaceuticals	4.77%
Industrials	Electrical Equipment	0.87%
Information Technology	Internet Software & Services	1.52%
Open Ended Fund	Closed Ended Cash Fund	7.53%
Utilities	Electric Utilities	2.12%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.34%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.84%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted: For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

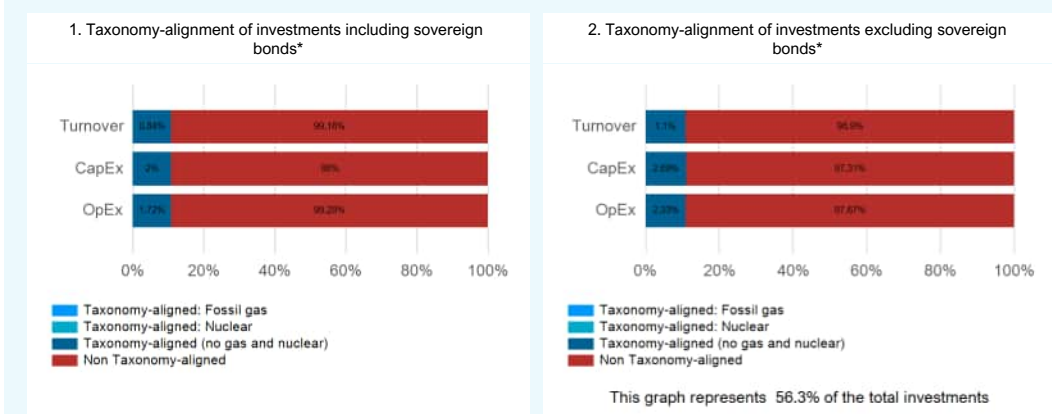

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.59% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.7% based on Turnover, 3.8% based on CapEx and 2.9% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.9% based on Turnover, 5.6% based on CapEx and 4.3% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.32% based on Turnover, 6.45% based on CapEx and 4.67% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.31% based on Turnover, 8.37% based on CapEx and 6.06% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.71%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 12.56%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 90.48%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.25 vs. 6.90

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 52.61%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.91%

iv) the percentage of the fund invested in sustainable investments with a social objective: 17.26%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 81.58%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 22.56%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 10.04%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.31%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.51%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 36.34%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.29%
- v) the percentage of the fund invested in sustainable investments with a social objective: 12.09%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 52.61% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Germany 2.40% 18/04/2030	Government	11.83%	Germany
Germany Bundesanleihe 2.50% 15/02/2035	Government	8.13%	Germany
Arcor UK Finance CP 2.53% 21/05/2025	Financials	5.09%	United Kingdom

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 52.61% in sustainable investments.

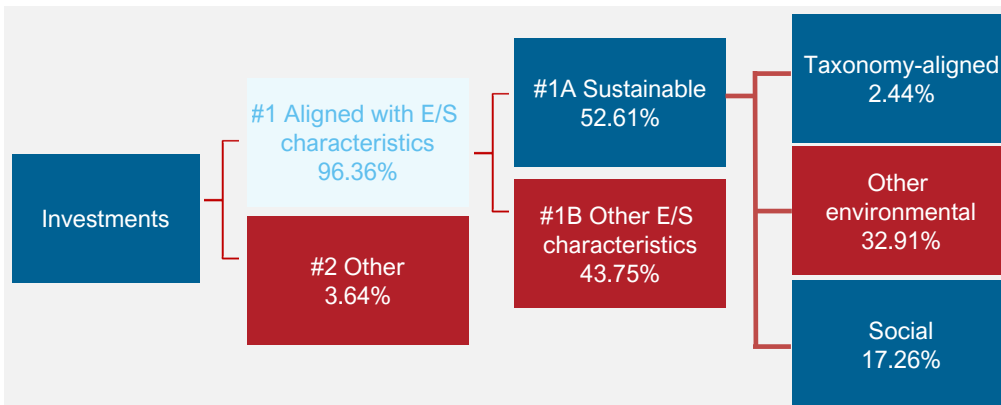

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.36%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 52.61% in sustainable investments of which 2.44% have an environmental objective (which is aligned with the EU Taxonomy), 32.91% have an environmental objective (which is not aligned with the EU Taxonomy) and 17.26% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Diversified Telecommunication Services	2.31%
Consumer Discretionary	Textiles & Apparel	3.47%
	Hotels Restaurants & Leisure	1.7%
Consumer Staples	Food & Staples Retailing	2.32%
	Household Products	2.31%
	Beverages	2.08%
Energy	Oil, Gas & Consumable Fuels	3.98%
Financials	Consumer Finance	4.63%
	Commercial Banks	2.04%
	Diversified Financial Services	11.1%
Government	Government	20.69%
Healthcare	Pharmaceuticals	7.16%
Industrials	Building Products	5.86%

	Internet Software & Services	1.51%
Materials	Chemicals	5.79%
	Construction Materials	2.54%
Open Ended Fund	Closed Ended Cash Fund	0.95%
Real Estate	Fixed Income - Corp Bds - Real Est Mgt & Dev - Re	0.93%
Utilities	Multi-Utilities	5.83%
	Electric Utilities	4.86%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 2.44%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.37%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

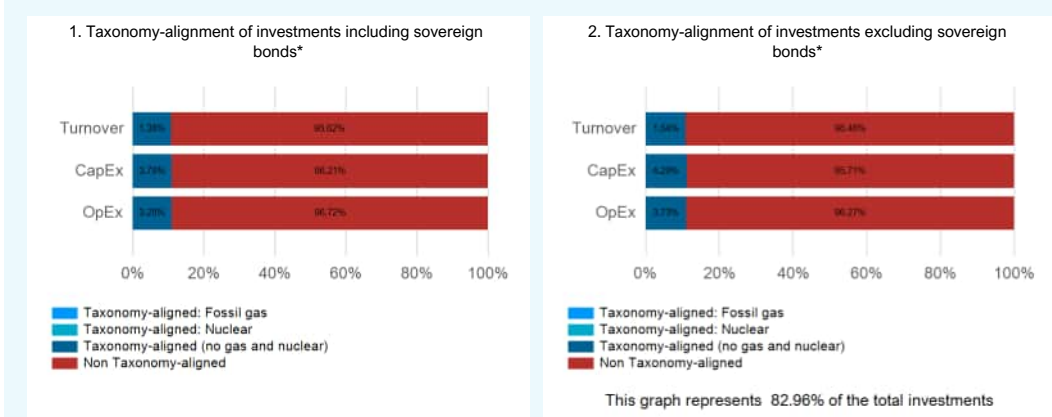

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.93% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.5% based on Turnover, 7.5% based on CapEx and 5.5% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.8% based on Turnover, 7.8% based on CapEx and 5.8% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

the EU Taxonomy was 4.81% based on Turnover, 9.79% based on CapEx and 7.08% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 5.48% based on Turnover, 11.14% based on CapEx and 8.06% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.91%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 17.26%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Euro Short Term Bond Fund

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 79.06%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.64 vs. 6.92

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 34.8%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 24.34%

iv) the percentage of the fund invested in sustainable investments with a social objective: 9.38%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.57%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 14.59%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 8.68%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.37%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.37%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 24.53%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 18.46%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.78%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 34.8% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Germany 3.10% 18/09/2025	Government	22.2%	Germany

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 34.8% in sustainable investments.

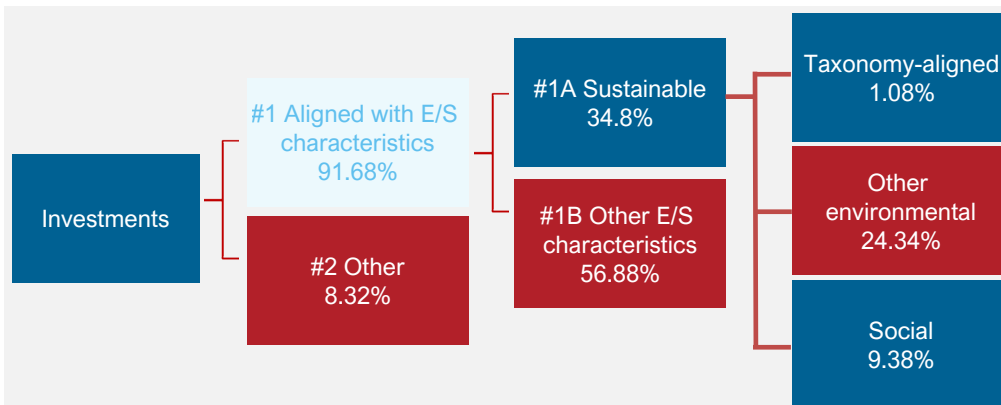

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 34.8% ,which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 1.08% have an environmental objective (which is aligned with the EU Taxonomy), 24.34% have an environmental objective (which is not aligned with the EU Taxonomy) and 9.38% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Wireless Telecommunication Services	1.36%
Consumer Discretionary	Textiles & Apparel	2.21%
	Hotels Restaurants & Leisure	1.37%
Consumer Staples	Household Products	8.85%
	Food & Staples Retailing	4.68%
	Food Products	3.71%
Energy	Energy Equipment & Services	1.49%
Financials	Diversified Financial Services	7.27%
	Consumer Finance	1.69%
	Capital Markets	1.51%
	Commercial Banks	0.64%

	Chemicals	2.99%
Open Ended Fund	Closed Ended Cash Fund	0%
Utilities	Multi-Utilities	6.79%
	Electric Utilities	5.54%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.08%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.47%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

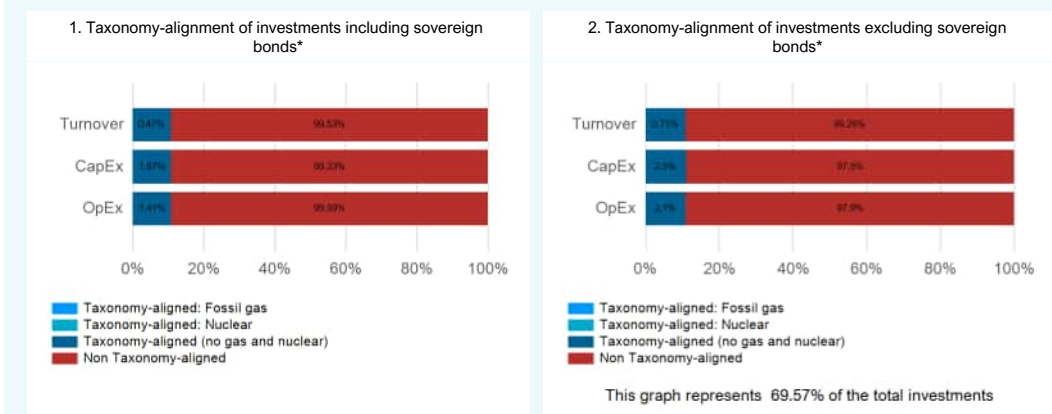

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.3% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.2% based on Turnover, 1.5% based on CapEx and 1% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.4% based on Turnover, 1.7% based on CapEx and 1.2% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.22% based on Turnover, 3.19% based on CapEx and 2.41% based on OpEx. The quarterly average share of sustainable investments (excluding

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.5% based on Turnover, 3.9% based on CapEx and 2.94% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 24.34%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 9.38%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - European High Yield Fund

Legal entity identifier:
QRZDLZXRZFWQ9BAHI598

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 22.85% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 74.39%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 5.56 vs. 5.39

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 22.85%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 16.41%

iv) the percentage of the fund invested in sustainable investments with a social objective: 5.59%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 65.21%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 10.86%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 6.4%
- v) the percentage of the fund invested in sustainable investments with a social objective: 3.83%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 71.82%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 15.64%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 10.97%
- v) the percentage of the fund invested in sustainable investments with a social objective: 2.76%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 22.85% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 22.85% in sustainable investments.

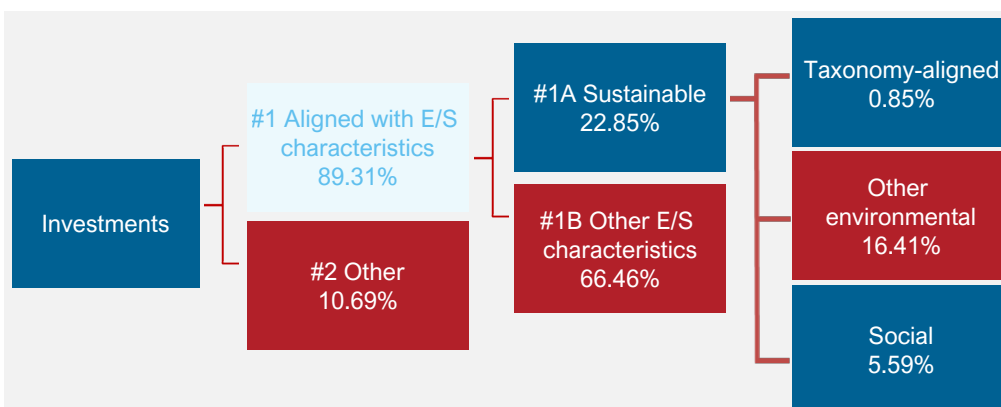

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 89.31%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 22.85% in sustainable investments of which 0.85% have an environmental objective (which is aligned with the EU Taxonomy), 16.41% have an environmental objective (which is not aligned with the EU Taxonomy) and 5.59% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.85%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.96%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

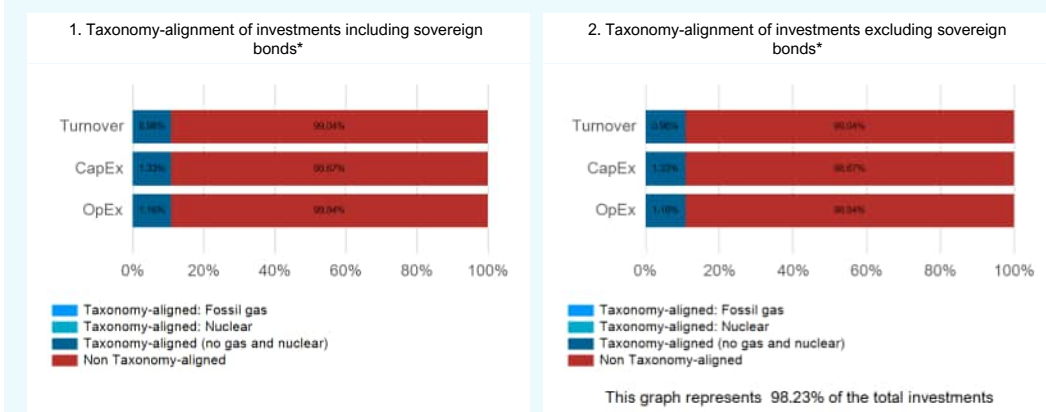

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.64% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.3% based on Turnover, 1.9% based on CapEx and 1.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.3% based on Turnover, 1.9% based on CapEx and 1.3% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.41% based on Turnover, 2.4% based on CapEx and 1.78% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.41% based on Turnover, 2.4% based on CapEx and 1.78% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.41%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 5.59%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Flexible Bond Fund

Legal entity identifier:
Y5GJXJ4DKJON310L3I87

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="checkbox"/> <input type="checkbox"/> Yes	<input type="checkbox"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 15.9% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.51%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 6.71 vs. 6.49

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 15.9%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.64%

iv) the percentage of the fund invested in sustainable investments with a social objective: 5.37%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.03%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 11.92%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 6.14%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.56%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 88.12%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 17.19%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.47%
- v) the percentage of the fund invested in sustainable investments with a social objective: 6.09%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 15.9% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation
describes the share of
investments in specific
assets.

What was the proportion of sustainability-related investments?

The fund invested 15.9% in sustainable investments.

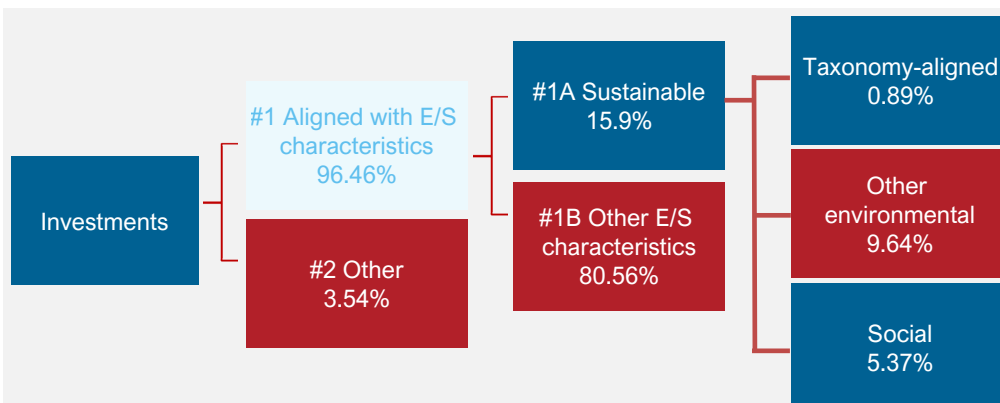

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 15.9% ,which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 0.89% have an environmental objective (which is aligned with the EU Taxonomy), 9.64% have an environmental objective (which is not aligned with the EU Taxonomy) and 5.37% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Diversified Consumer Services	0.33%
	Hotels Restaurants & Leisure	0.25%
Energy	Oil, Gas & Consumable Fuels	0.44%
	Energy Equipment & Services	0.06%
Financials	Diversified Financial Services	5.44%
	Consumer Finance	0.75%
	Commercial Banks	0.62%
	Insurance	0.28%
Government	Government	82.25%
Healthcare	Pharmaceuticals	0.71%
	Health Care Providers & Services	0.58%
	Biotechnology	0.32%

Materials	Chemicals	0.64%
Open Ended Fund	Closed Ended Cash Fund	0.49%
Real Estate	Real Estate Investment Trusts (Reits)	0.19%
	Real Estate	0.05%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.89%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.26%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted: For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a

corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

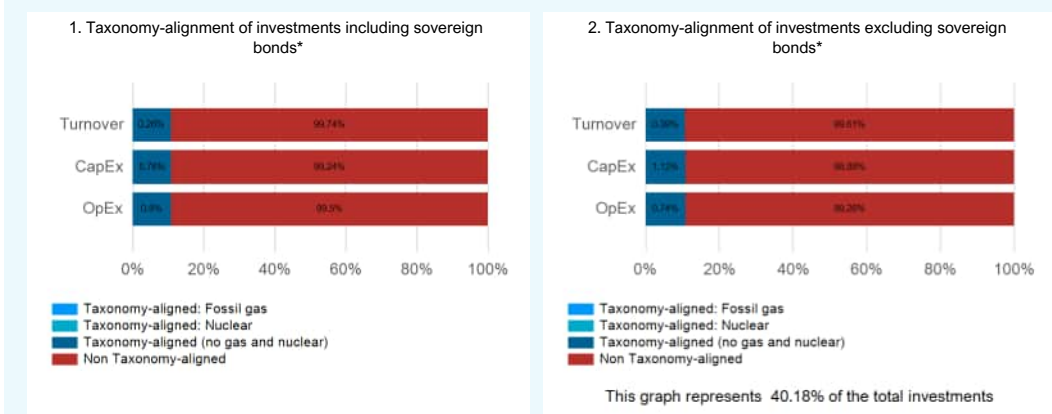

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.07% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.1% based on Turnover, 3.3% based on CapEx and 2.2% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.8% based on Turnover, 4.3% based on CapEx and 2.9% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.18% based on Turnover, 2.07% based on CapEx and 1.57% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.61% based on Turnover, 2.82% based on CapEx and 2.12% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.64%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 5.37%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Bond Fund

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 13.48% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.80%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.03 vs. 6.50

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 13.48%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.9%

iv) the percentage of the fund invested in sustainable investments with a social objective: 3.55%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 88.71%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 7.69%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 3.72%
- v) the percentage of the fund invested in sustainable investments with a social objective: 3.25%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 88.54%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 7.79%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 4.69%
- v) the percentage of the fund invested in sustainable investments with a social objective: 2.86%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 13.48% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The fund invested 13.48% in sustainable investments.

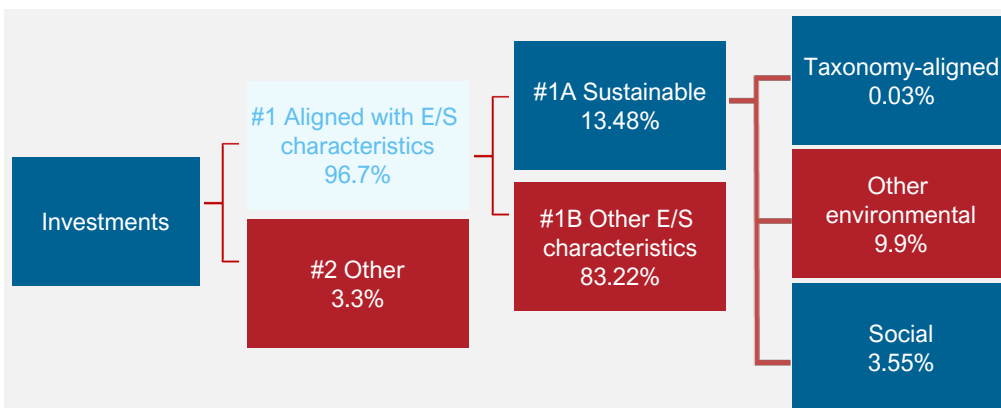

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 13.48%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 0.03% have an environmental objective (which is aligned with the EU Taxonomy), 9.9% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.55% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.03%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For

nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

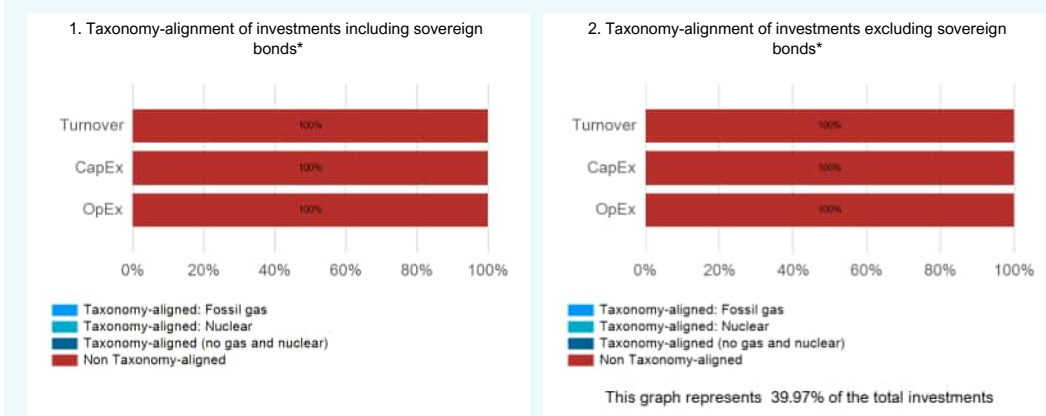

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.5% based on Turnover, 0.7% based on CapEx and 0.5% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.1% based on Turnover, 1.5% based on CapEx and 1% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.06% based on Turnover, 0.11% based on CapEx and 0.08% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.14% based on Turnover, 0.28% based on CapEx and 0.19% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.9%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.55%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Corporate Bond Fund

Legal entity identifier:
E1PSUJKP1HSFQL89GJ11

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No

<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 87.85%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 6.83 vs. 6.64

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 59.8%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 1.9%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 39.23%

v) the percentage of the fund invested in sustainable investments with a social objective: 18.67%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.87%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 25.25%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 1.97%
- v) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 15.63%
- vi) the percentage of the fund invested in sustainable investments with a social objective: 7.64%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 88.29%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 34.73%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy: 2.03%
- v) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.71%
- vi) the percentage of the fund invested in sustainable investments with a social objective: 12%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 59.8% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation
describes the share of
investments in specific
assets.

What was the proportion of sustainability-related investments?

The fund invested 59.8% in sustainable investments.

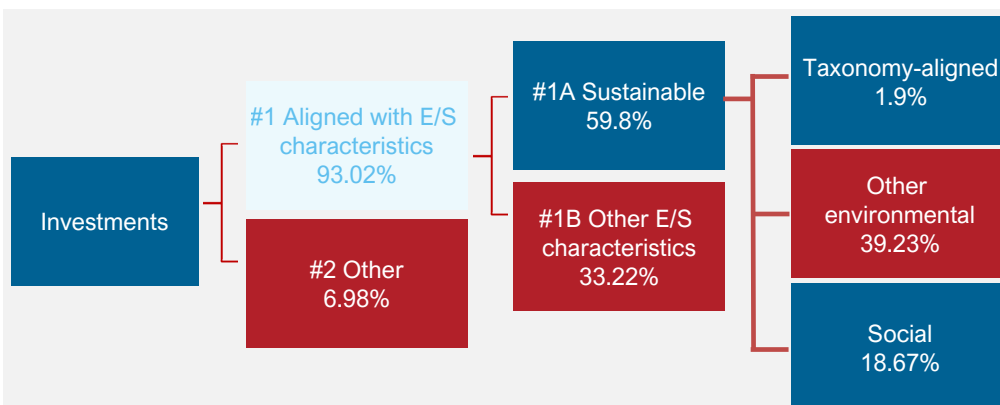

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.02%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 59.8% in sustainable investments of which 1.9% have an environmental objective (which is aligned with the EU Taxonomy), 39.23% have an environmental objective (which is not aligned with the EU Taxonomy) and 18.67% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.9%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 1.49%
- 2) climate change adaptation: 0.01%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

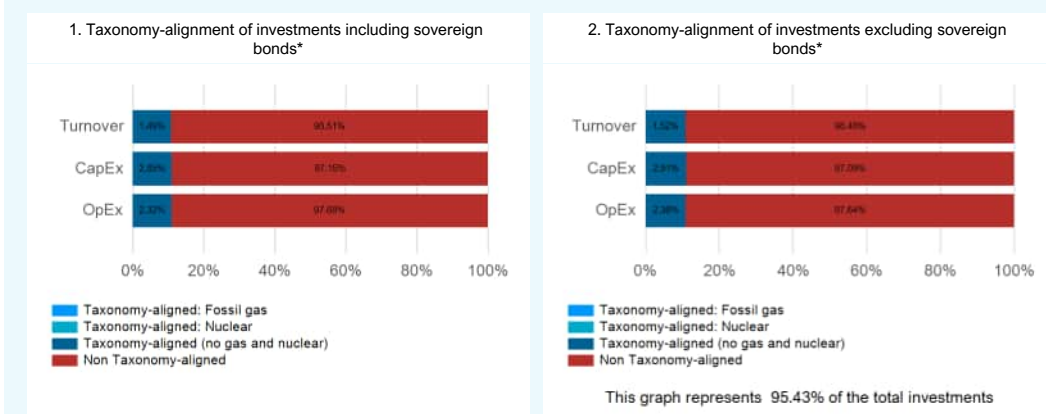

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 1.06% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.5% based on Turnover, 3.2% based on CapEx and 2.5% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.6% based on Turnover, 3.3% based on CapEx and 2.6% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.73% based on Turnover, 2.27% based on CapEx and 1.9% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.8% based on Turnover, 2.36% based on CapEx and 1.98% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 39.23%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 18.67%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global High Yield Fund

Legal entity identifier:
549300HLL9VXER4ESF55

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 17.95% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 75.93%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 5.27 vs. 5.14

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 17.95%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 11.32%

iv) the percentage of the fund invested in sustainable investments with a social objective: 6.49%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 66.58%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 10.76%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 3.82%
- v) the percentage of the fund invested in sustainable investments with a social objective: 6.94%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 70.83%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 11.41%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.35%
- v) the percentage of the fund invested in sustainable investments with a social objective: 6%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 17.95% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 17.95% in sustainable investments.

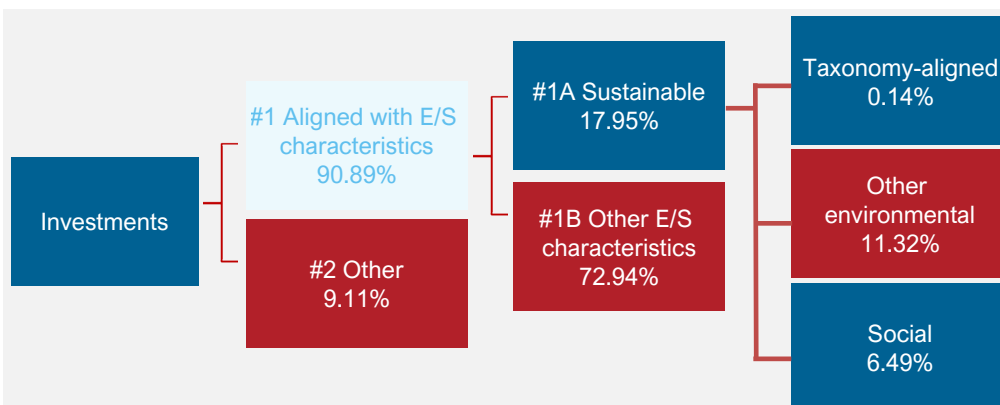

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.89%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 17.95% in sustainable investments of which 0.14% have an environmental objective (which is aligned with the EU Taxonomy), 11.32% have an environmental objective (which is not aligned with the EU Taxonomy) and 6.49% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of: **-turnover** reflecting the share of revenue from green activities of investee companies. **- capital expenditure** (CapEx) showing the green investments

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.14%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.02%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

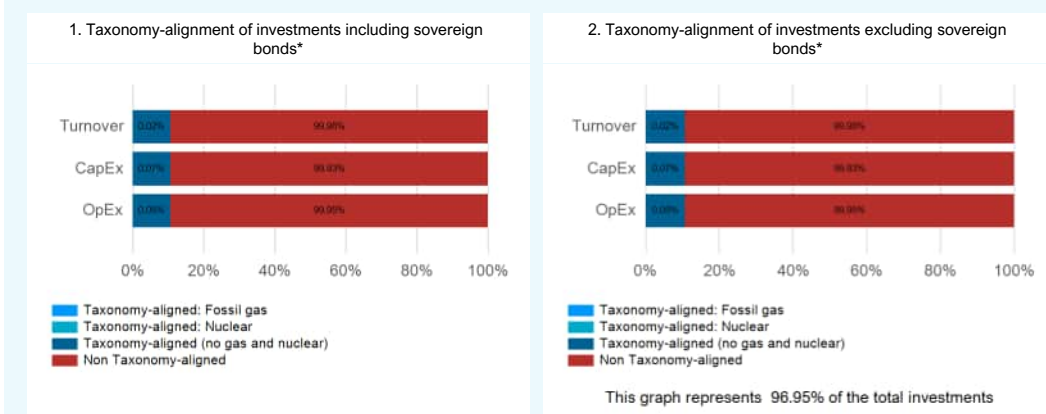

☐ In nuclear energy

☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.01% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.6% based on Turnover, 0.1% based on CapEx and 0.1% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.6% based on Turnover, 0.1% based on CapEx and 0.1% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.26% based on Turnover, 0.06% based on CapEx and 0.04% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.26% based on Turnover, 0.06% based on CapEx and 0.04% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.32%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 6.49%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Hybrids Bond Fund

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 31.81% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 100%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

(i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 6.90 vs. 6.78

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 31.81%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.46%

iv) the percentage of the fund invested in sustainable investments with a social objective: 10.71%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.8%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 14.05%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.2%
- v) the percentage of the fund invested in sustainable investments with a social objective: 7.38%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.51%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 20.3%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.77%
- v) the percentage of the fund invested in sustainable investments with a social objective: 9.35%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 31.81% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Germany 2.90% 18/06/2026	Government	10.85%	Germany

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 31.81% in sustainable investments.

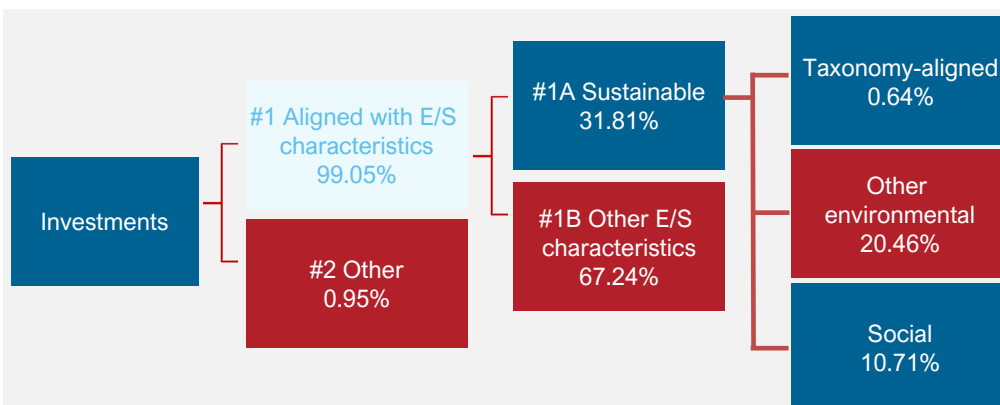

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.05%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 31.81% in sustainable investments of which 0.64% have an environmental objective (which is aligned with the EU Taxonomy), 20.46% have an environmental objective (which is not aligned with the EU Taxonomy) and 10.71% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Energy	Oil, Gas & Consumable Fuels	3.36%
Financials	Commercial Banks	68.41%
	Capital Markets	5.95%
	Insurance	2.26%
	Consumer Finance	0.58%
Government	Government	10.85%
Healthcare	Health Care Providers & Services	0.81%
Open Ended Fund	Closed Ended Cash Fund	0.69%
Utilities	Electric Utilities	5.63%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.64%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.42%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☒ Yes

☒ In fossil gas

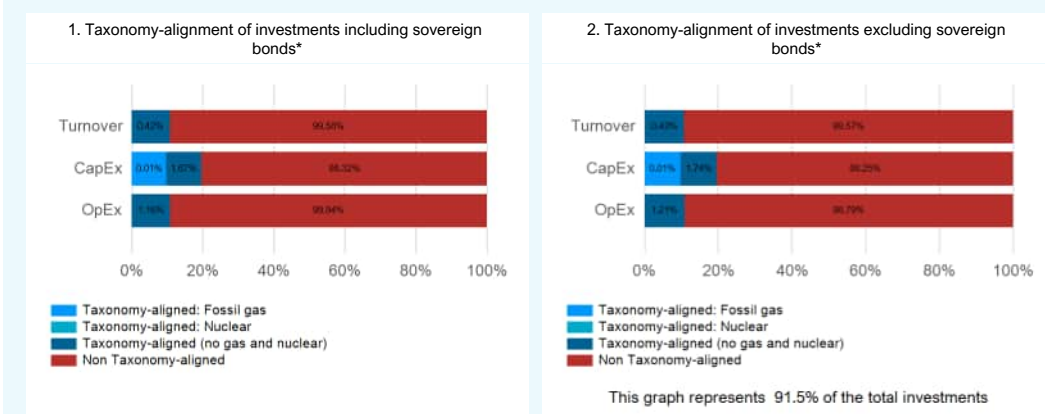

☐ In nuclear energy

☐ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.27% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.9% based on Turnover, 3.3% based on CapEx and 2.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.9% based on Turnover, 3.3% based on CapEx and 2.3% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.83% based on Turnover, 2.41% based on CapEx and 1.59% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.83% based on Turnover, 2.42% based on CapEx and 1.59% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20.46%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 10.71%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 26.49% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe. The investment universe comprises a blend of Global Investment Grade corporate bonds, Global High Yield bonds and Global Emerging Market bonds.

ESG scores were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values are aggregated to determine the average ESG score of the portfolio and that of the investment universe.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the fund's investment universe using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.35%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of the fund's investment universe: 6.10 vs. 6.00

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 26.49%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 17.68%

iv) the percentage of the fund invested in sustainable investments with a social objective: 7.93%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 73.16%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 13.26%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.52%
- v) the percentage of the fund invested in sustainable investments with a social objective: 7.45%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 78.2%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 16.47%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 10.01%
- v) the percentage of the fund invested in sustainable investments with a social objective: 5.48%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 26.49% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 26.49% in sustainable investments.

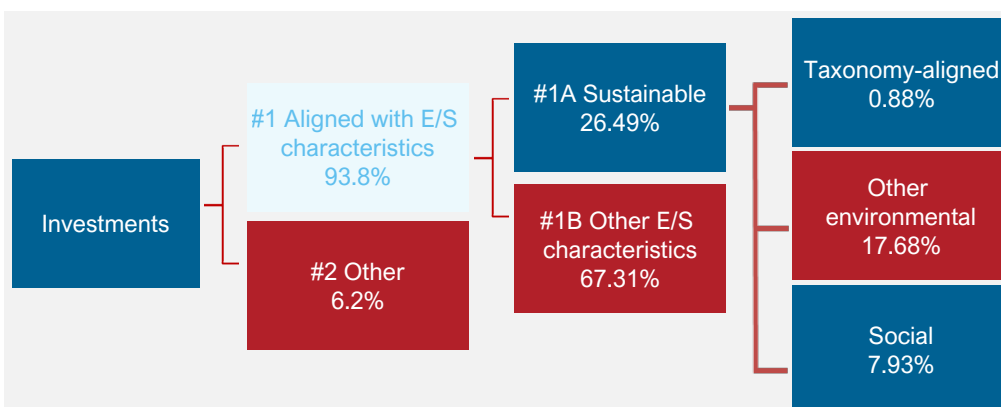

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.8%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 26.49% in sustainable investments of which 0.88% have an environmental objective (which is aligned with the EU Taxonomy), 17.68% have an environmental objective (which is not aligned with the EU Taxonomy) and 7.93% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.88%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.25%
- 2) climate change adaptation: 0.03%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed

as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

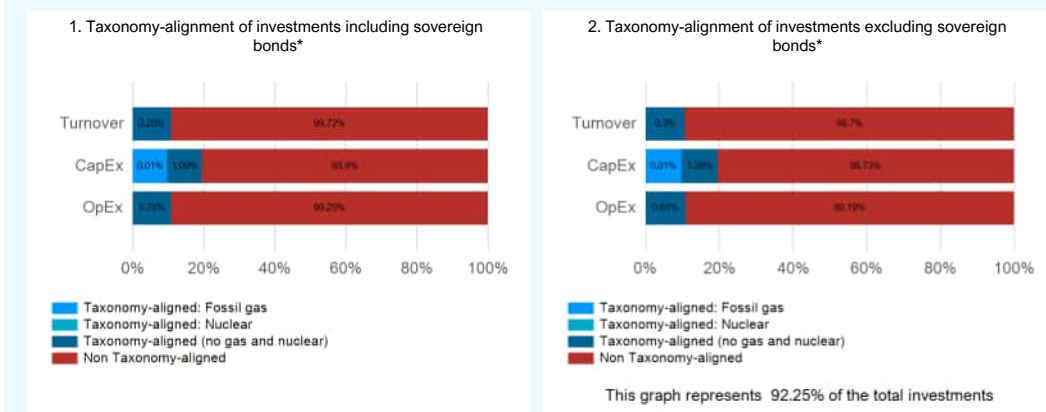

☒ Yes

☒ In fossil gas

☐ In nuclear energy

☐ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.22% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.1% based on Turnover, 0.2% based on CapEx and 0.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.2% based on Turnover, 0.2% based on CapEx and 0.3% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.38% based on Turnover, 0.82% based on CapEx and 0.47% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.42% based on Turnover, 0.93% based on CapEx and 0.53% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 17.68%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 7.93%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Inflation-linked Bond Fund

Legal entity identifier:
78VTRQN40UWE9NYCJW22

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <div> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <div> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 97.37%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 6.97 vs. 6.88
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 99.05%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 97.91%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.09%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Government	Government	97.41%
Open Ended Fund	Closed Ended Cash Fund	0.11%

Source of data: Fidelity International, as at 30 September 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned

activities are expressed as a share of:

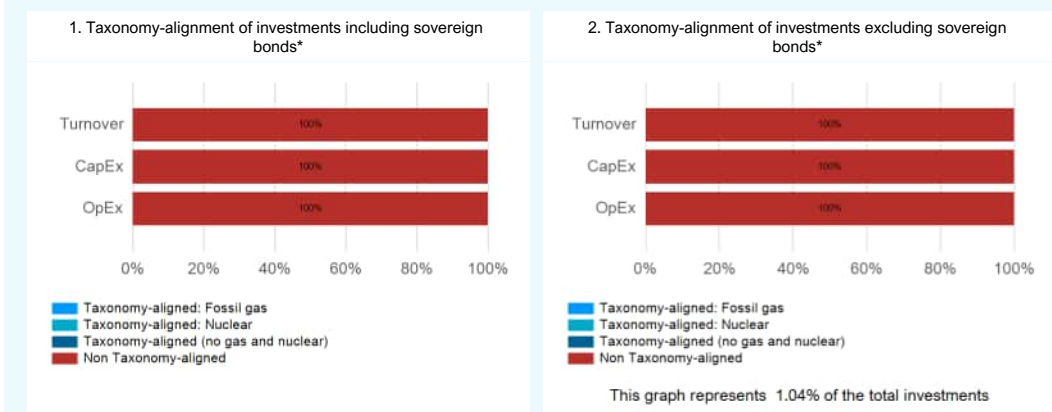

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Global Short Duration Income Fund

Legal entity identifier:
549300DE58GK4SNQH841

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 27.37% of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe. The investment universe comprises a blend of 1-3yr US, UK, European and Asian investment grade corporate bonds, Emerging Market corporate bonds and high yield bonds.

ESG scores were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values are aggregated to determine the average ESG score of the portfolio and that of the investment universe.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the fund's investment universe using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 77.47%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of the fund's investment universe: 6.09 vs. 5.96

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 27.37%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 22.27%

iv) the percentage of the fund invested in sustainable investments with a social objective: 3.85%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 71.83%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 13.3%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 8.75%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.21%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 74.31%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 16.44%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 12.65%
- v) the percentage of the fund invested in sustainable investments with a social objective: 3.18%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 27.37% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 27.37% in sustainable investments.

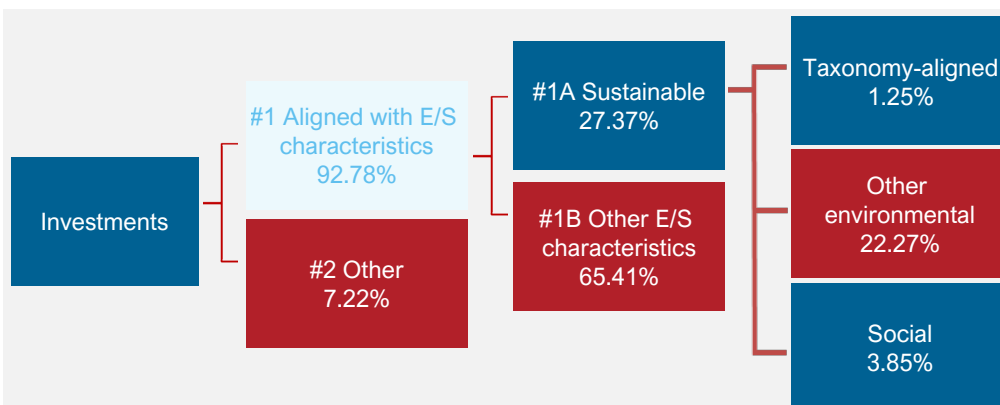

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 92.78%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 27.37% in sustainable investments of which 1.25% have an environmental objective (which is aligned with the EU Taxonomy), 22.27% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.85% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 1.25%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.69%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☒ Yes
- ☒ In fossil gas ☐ In nuclear energy
- ☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

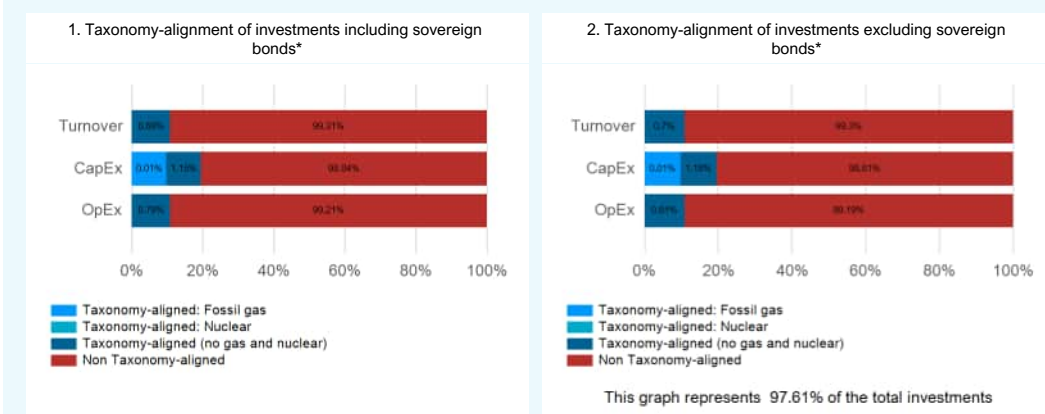

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.63% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.5% based on CapEx and 0.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.5% based on CapEx and 0.3% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.55% based on Turnover, 0.96% based on CapEx and 0.55% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.56% based on Turnover, 0.98% based on CapEx and 0.56% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 22.27%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.85%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Strategic Bond Fund

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 15.27% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.35%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 6.87 vs. 6.73

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 15.27%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.28%

iv) the percentage of the fund invested in sustainable investments with a social objective: 5.17%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 89.26%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 11.75%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.82%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.83%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 91.43%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 16.4%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 8.81%
- v) the percentage of the fund invested in sustainable investments with a social objective: 6.1%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 15.27% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 15.27% in sustainable investments.

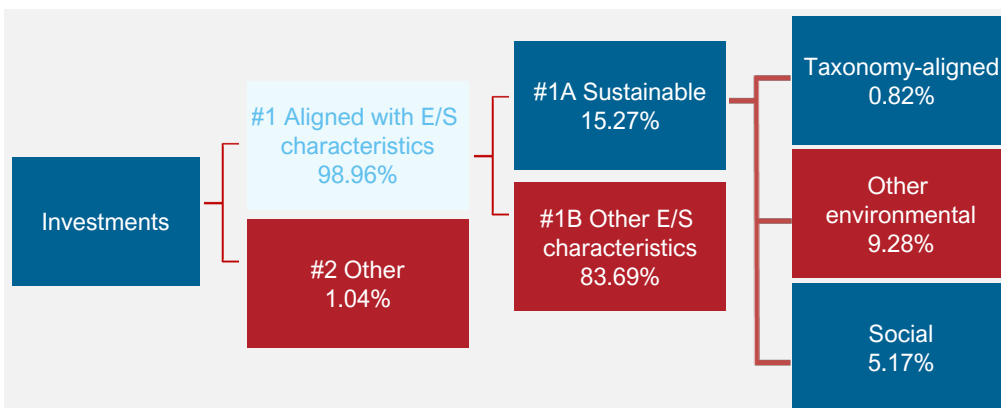

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 15.27%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 0.82% have an environmental objective (which is aligned with the EU Taxonomy), 9.28% have an environmental objective (which is not aligned with the EU Taxonomy) and 5.17% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.82%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.26%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted: For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

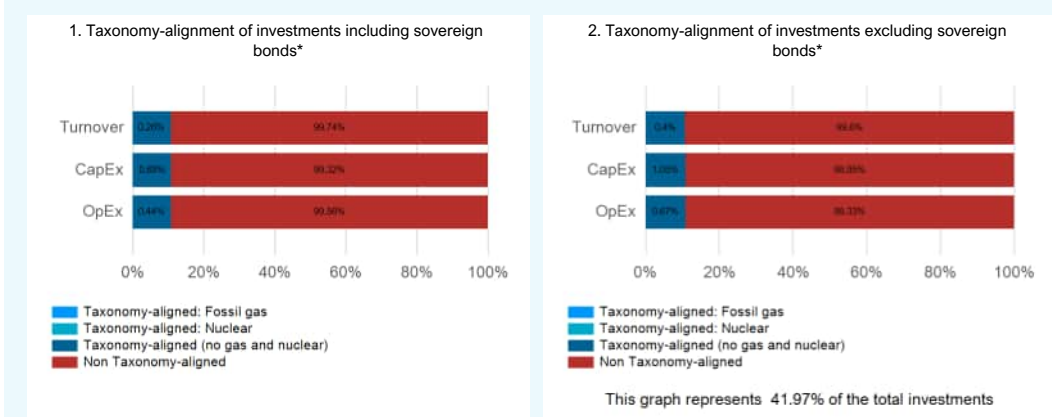

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.07% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2% based on Turnover, 2.9% based on CapEx and 1.9% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.7% based on Turnover, 3.9% based on CapEx and 2.6% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.01% based on Turnover, 1.78% based on CapEx and 1.35% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.47% based on Turnover, 2.59% based on CapEx and 1.94% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.28%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 5.17%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'top investments' and 'sector' was unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe. The investment universe comprises fixed and floating rate securitised investments backed by a variety of assets such as corporate loans.

ESG scores were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values are aggregated to determine the average ESG score of the portfolio and that of the investment universe.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the fund's investment universe using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 54.74%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of the fund's investment universe: 4.70 vs. 3.32
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

The fund was launched on 20 Jul 2022.

For the period 20 July 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 56.62%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 56.86%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Source of data: Fidelity International, as at 30 April 2025.

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation
describes the share of
investments in specific
assets.

What was the proportion of sustainability-related investments?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 89.33%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Financials	Diversified Financial Services	92.38%
	Consumer Finance	2.03%
	Thriffs & Mortgage Finance	0.39%
Government	Corporate Bonds	1.86%
Real Estate	Real Estate Investment Trusts (Reits)	0.59%

Source of data: Fidelity International, as at 30 April 2025.

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund was launched on 20 Jul 2022.

For the period 20 July 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

---	--

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's benchmark. ESG scores were determined by reference to ESG ratings.

ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark. The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 93.40%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.08 vs. 6.83

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 16.16%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 9.71%

iv) the percentage of the fund invested in sustainable investments with a social objective: 6.42%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 89.13%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 8.81%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 3.96%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.44%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 91.74%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 11.11%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 5.94%
- v) the percentage of the fund invested in sustainable investments with a social objective: 4.71%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 16.16% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
US Treasury 4.25% 15/11/2034	Government	10.06%	United States

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 16.16% in sustainable investments.

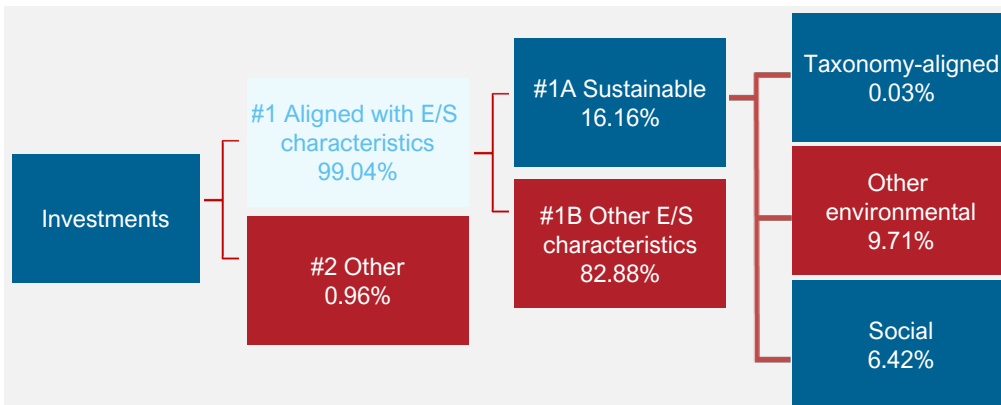

What was the asset allocation?

The proportion of the investments of the fund used to meet the sustainable investment objective, in accordance with the binding elements of the investment strategy of the financial product is 16.16% ,which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 0.03% have an environmental objective (which is aligned with the EU Taxonomy), 9.71% have an environmental objective (which is not aligned with the EU Taxonomy) and 6.42% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Communication Services	Wireless Telecommunication Services	0.51%
Consumer Discretionary	Automobiles	1.56%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations

on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

aligned with the EU Taxonomy was 0.03%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.5% based on CapEx and 0.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.8% based on Turnover, 1% based on CapEx and 0.7% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.18% based on Turnover, 0.27% based on CapEx and 0.22% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.41% based on Turnover, 0.62% based on CapEx and 0.51% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.71%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 6.42%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - US High Yield Fund

Legal entity identifier:
5493009BXYOCIRTXRS63

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 14.39% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 70.72%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 5.28 vs. 5.22

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 14.39%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 10.57%

iv) the percentage of the fund invested in sustainable investments with a social objective: 3.63%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as the fund was uplifted to an Article 8 fund on 23 Jan 2024.

For the period 23 Jan 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 63.05%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 12.44%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 7.3%

v) the percentage of the fund invested in sustainable investments with a social objective: 4.98%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 14.39% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 14.39% in sustainable investments.

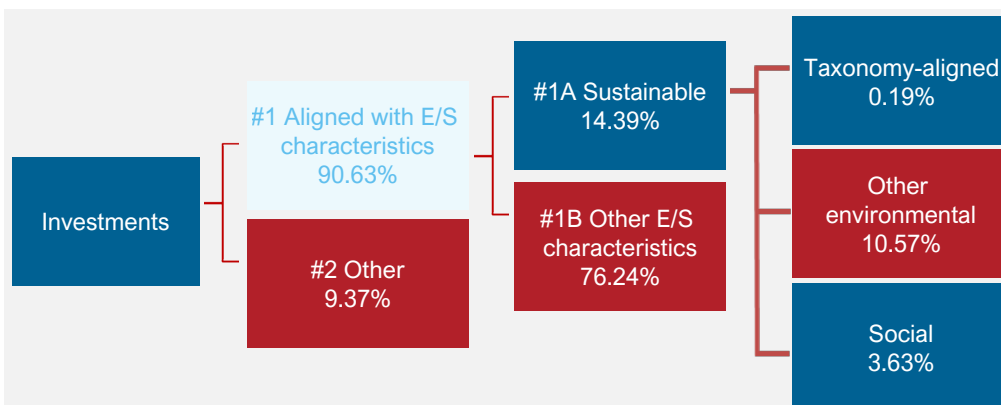

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.63%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 14.39% in sustainable investments of which 0.19% have an environmental objective (which is aligned with the EU Taxonomy), 10.57% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.63% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.19%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as the fund was uplifted to an Article 8 fund on 23 Jan 2024.

For the period 23 Jan 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.03% based on Turnover, 0.03% based on CapEx and 0.02% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.03% based on Turnover, 0.03% based on CapEx and 0.02% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.57%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.63%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Euro Cash Fund

Legal entity identifier:
54930085GQE5XBYYS267

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' was unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe. The investment universe comprises eligible issuers of short-dated debt.

ESG scores were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values are aggregated to determine the average ESG score of the portfolio and that of the investment universe.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the fund's investment universe using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 85.32%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of the fund's investment universe: 6.94 vs. 6.69
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 80.59%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 80.66%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation
describes the share of
investments in specific
assets.

What was the proportion of sustainability-related investments?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 89.25%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Automobiles	2.05%
	Textiles & Apparel	0.77%
Consumer Staples	Household Products	1.22%
Energy	Oil, Gas & Consumable Fuels	1.28%
Financials	Commercial Banks	58.72%
	Consumer Finance	3.21%
	Diversified Financial Services	20.24%
	Capital Markets	1.28%
	Insurance	1.28%
Government	Government	1.99%
Healthcare	Pharmaceuticals	2.56%
Industrials	Machinery	2.88%
	Transportation Infrastructure	0.64%
Materials	Chemicals	0.64%
Utilities	Gas Utilities	0.64%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments. The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31

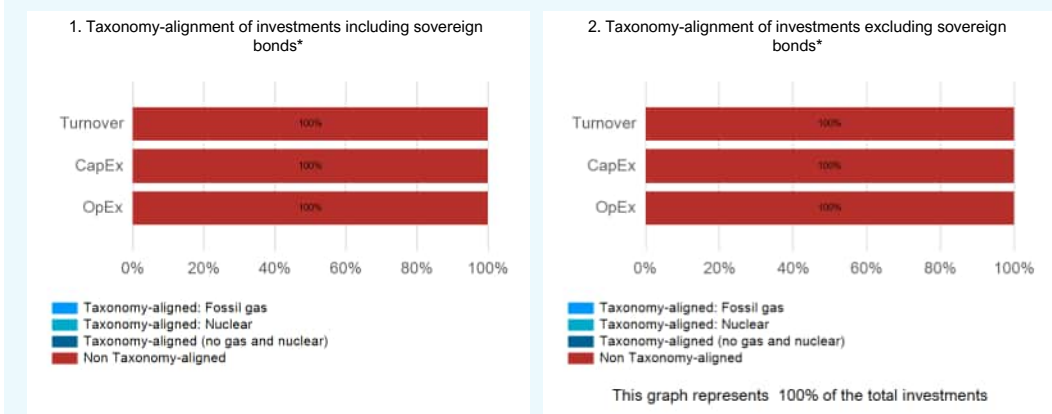

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.0% based on Turnover, 0.0% based on CapEx and 0.0% based on OpEx.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - US Dollar Cash Fund

Legal entity identifier:
549300VCV3WGOB2T4874

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' was unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe. The investment universe comprises eligible issuers of short-dated debt.

ESG scores were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values are aggregated to determine the average ESG score of the portfolio and that of the investment universe.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the fund's investment universe using either a weighted average or equal weighted method of calculation. Further details on the above calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 84.93%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the ESG score of the fund's portfolio measured against the ESG score of the fund's investment universe: 7.05 vs. 6.69
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 84.13%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 81.21%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund did not commit itself to having a minimum proportion of sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments, but is not monitored for this fund.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 84.26%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its investment universe.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Automobiles	0.76%
Financials	Commercial Banks	75.07%
	Diversified Financial Services	20.31%
	Capital Markets	2.27%
	Consumer Finance	0.65%
Industrials	Transportation Infrastructure	1.9%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0% based on Turnover, 0% based on CapEx and 0% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The fund did not commit itself to having a minimum proportion of sustainable investments with an environmental objective not aligned with the EU Taxonomy. Even though the fund did not have such commitment, it may have invested into this type of investments.

What was the share of socially sustainable investments?

The fund did not commit itself to having a minimum proportion of socially sustainable investments. Even though the fund did not have such commitment, it may have invested into this type of investments.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of the fund's investment universe.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2025 Fund

Legal entity identifier:
549300JQL1HZ76MV0M05

Environmental and/or social characteristics

<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 100%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 99.76%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 14.73%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 11.35%

iv) the percentage of the fund invested in sustainable investments with a social objective: 3.1%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund on 23 Jan 2024.

For the period 23 Jan 2024- 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 92.65%
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 12.83%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 7.63%
- (v) the percentage of the fund invested in sustainable investments with a social objective: 3.7%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 14.73% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions helped to mitigate PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

The fund invested 14.73% in sustainable investments.

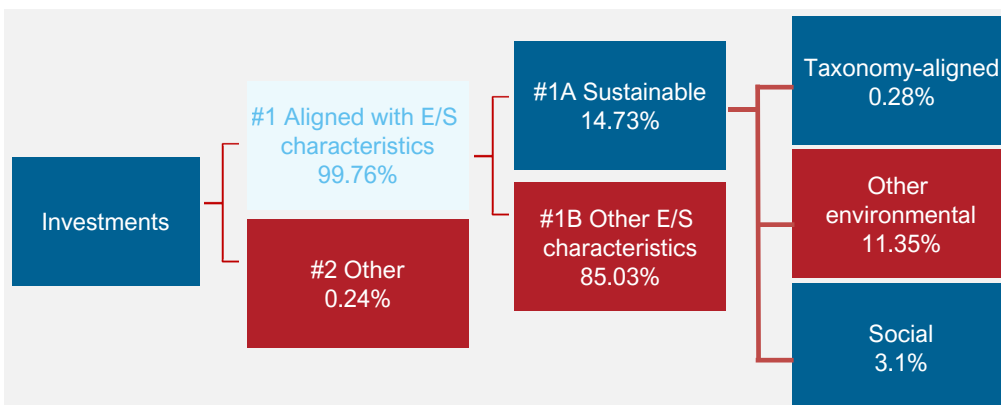

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.76%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 14.73% in sustainable investments of which 0.28% have an environmental objective (which is aligned with the EU Taxonomy), 11.35% have an environmental objective (which is not aligned with the EU Taxonomy) and 3.1% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas**

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.28%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.06%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control: 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems.

To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

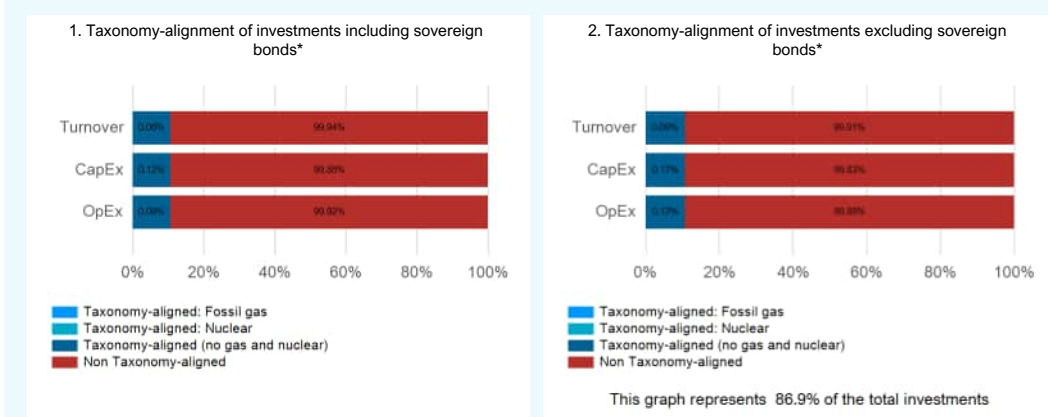

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.03% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund on 23 Jan 2024.

For the period 23 Jan 2024-30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.23% based on Turnover, 0.35% based on CapEx and 0.31% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.5% based on Turnover, 0.76% based on CapEx and 0.65% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.35%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 3.1%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2030 Fund

<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.62%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 90.68%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 34.8%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 21.12%

iv) the percentage of the fund invested in sustainable investments with a social objective: 12.69%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 80.56%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 34.41%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 19.58%

v) the percentage of the fund invested in sustainable investments with a social objective: 13.05%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 34.8% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Ishares S&P 500 Swap Ucits ETF	Financials	3.7%	Ireland

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The fund invested 34.8% in sustainable investments.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 90.68%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 34.8% in sustainable investments of which 0.99% have an environmental objective (which is aligned with the EU Taxonomy) and 21.12% have an environmental objective (which is not aligned with the EU Taxonomy) and 12.69% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.99%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.13%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine

to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

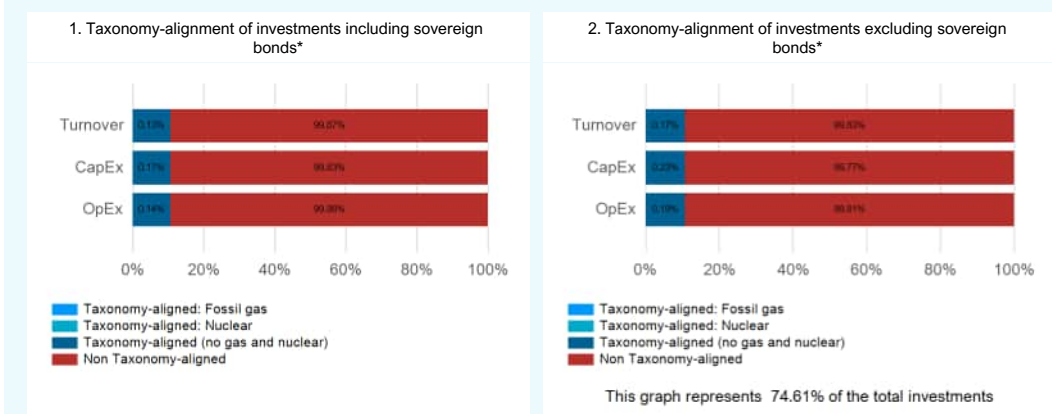

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.09% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.34% based on Turnover, 0.43% based on CapEx and 0.3% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy was 0.46% based on Turnover, 0.58% based on CapEx and 0.41% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 21.12%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 12.69%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2035 Fund

Legal entity identifier:
549300XULTNPDTV56Y50

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.34% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.42%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 87.38%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 55.34%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.88%

iv) the percentage of the fund invested in sustainable investments with a social objective: 22.19%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.38%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 51.12%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.94%

v) the percentage of the fund invested in sustainable investments with a social objective: 20.75%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 55.34% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Italy 2.95% 01/07/2030	Government	6.53%	Italy

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 55.34% in sustainable investments.

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.38%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 55.34% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 32.88% have an environmental objective (which is not aligned with the EU Taxonomy) and 22.19% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.17%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

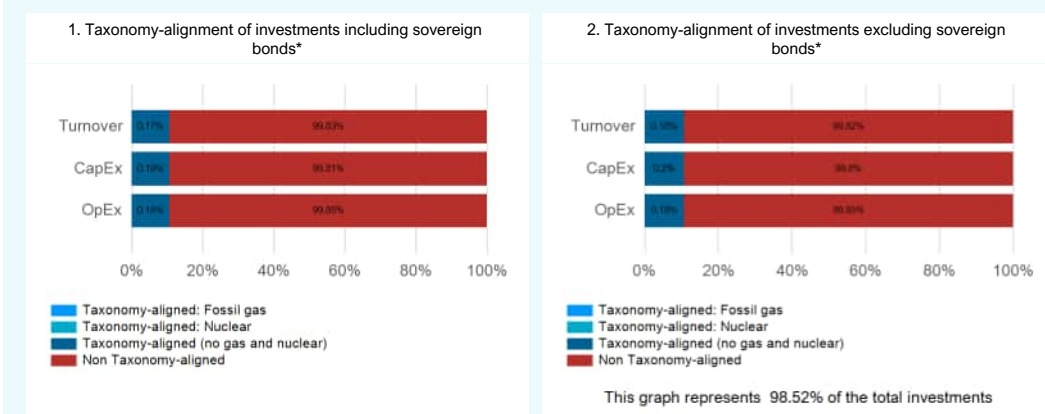

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

expenditure (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.49% based on Turnover, 0.62% based on CapEx and 0.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.53% based on Turnover, 0.67% based on CapEx and 0.43% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.88%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 22.19%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2040 Fund

549300CNQ4TMHDBVK47

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.35% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.42%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 87.39%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 55.35%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.88%

iv) the percentage of the fund invested in sustainable investments with a social objective: 22.2%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.37%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 51.12%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.94%

v) the percentage of the fund invested in sustainable investments with a social objective: 20.75%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 55.35% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Apple	Information Technology	4.07%	United States
Microsoft	Information Technology	3.82%	United States

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 55.35% in sustainable investments.

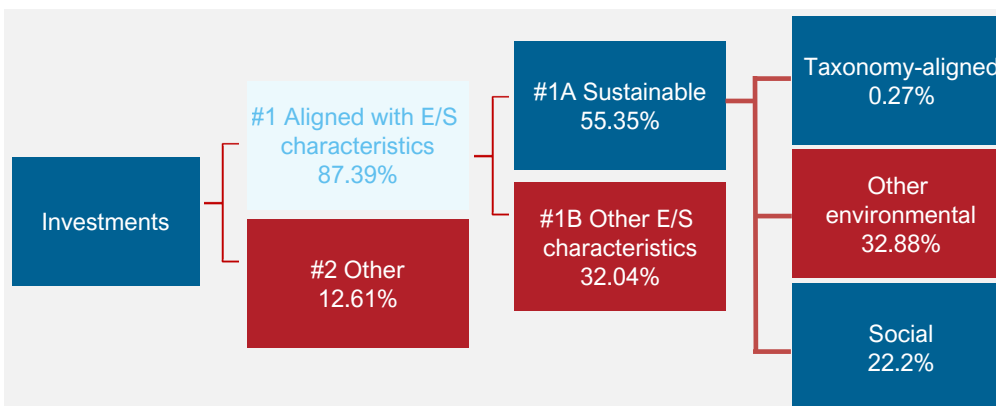

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.39%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 55.35% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 32.88% have an environmental objective (which is not aligned with the EU Taxonomy) and 22.2% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.17%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

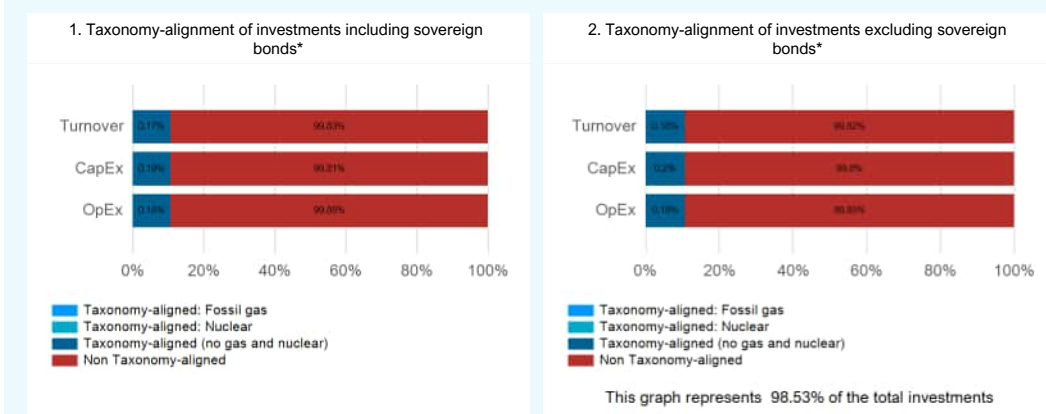

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

expenditure (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.49% based on Turnover, 0.62% based on CapEx and 0.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.53% based on Turnover, 0.66% based on CapEx and 0.43% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.88%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 22.2%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2045 Fund

Legal entity identifier:
549300Q8NRARUSN1XS58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.35% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.35%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 87.37%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 55.35%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.88%

iv) the percentage of the fund invested in sustainable investments with a social objective: 22.2%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.33%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 51.1%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.92%

v) the percentage of the fund invested in sustainable investments with a social objective: 20.75%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 55.35% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Apple	Information Technology	4.07%	United States
Microsoft	Information Technology	3.81%	United States

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 55.35% in sustainable investments.

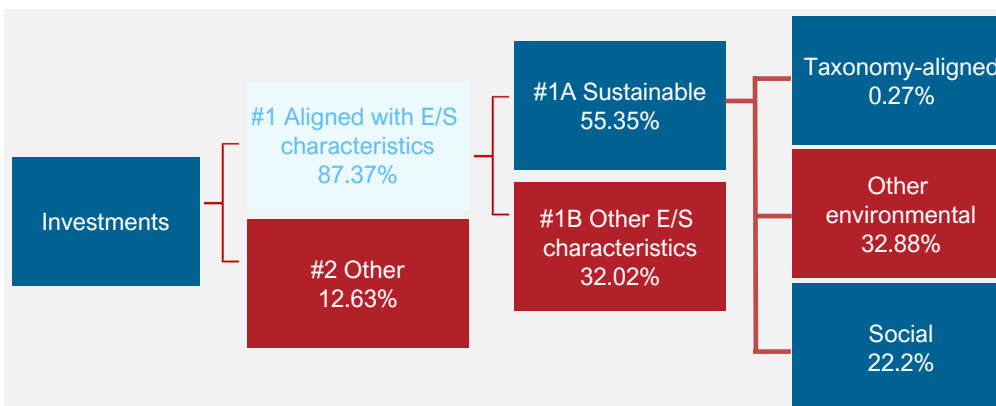

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.37%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 55.35% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 32.88% have an environmental objective (which is not aligned with the EU Taxonomy) and 22.2% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.17%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

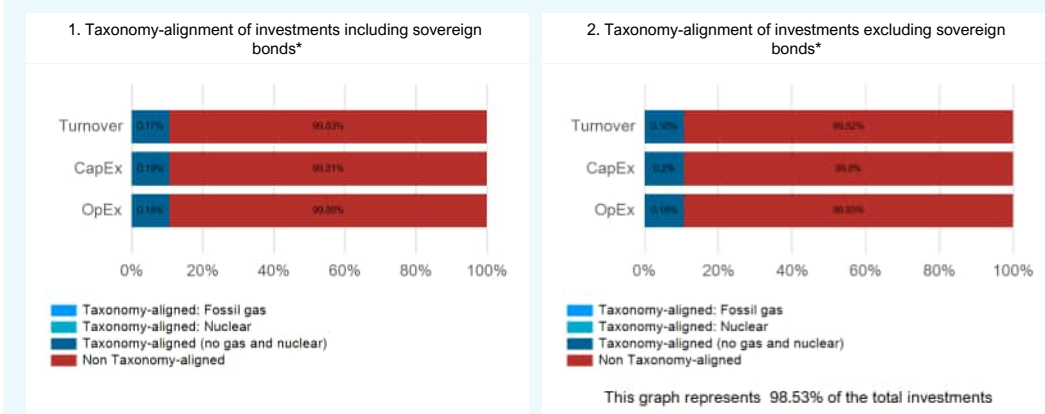

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

expenditure (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.49% based on Turnover, 0.62% based on CapEx and 0.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.52% based on Turnover, 0.66% based on CapEx and 0.43% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.88%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 22.2%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2050 Fund

Legal entity identifier:
549300J4YDP2CV913309

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.34% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.40%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 87.37%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 55.34%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.87%

iv) the percentage of the fund invested in sustainable investments with a social objective: 22.2%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.34%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 51.11%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.93%

v) the percentage of the fund invested in sustainable investments with a social objective: 20.75%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 55.34% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Apple	Information Technology	4.07%	United States

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 55.34% in sustainable investments.

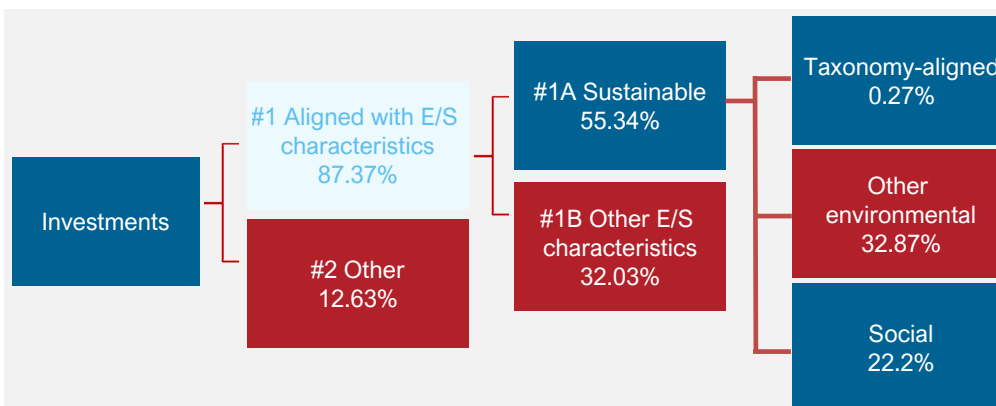

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.37%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 55.34% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 32.87% have an environmental objective (which is not aligned with the EU Taxonomy) and 22.2% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.17%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

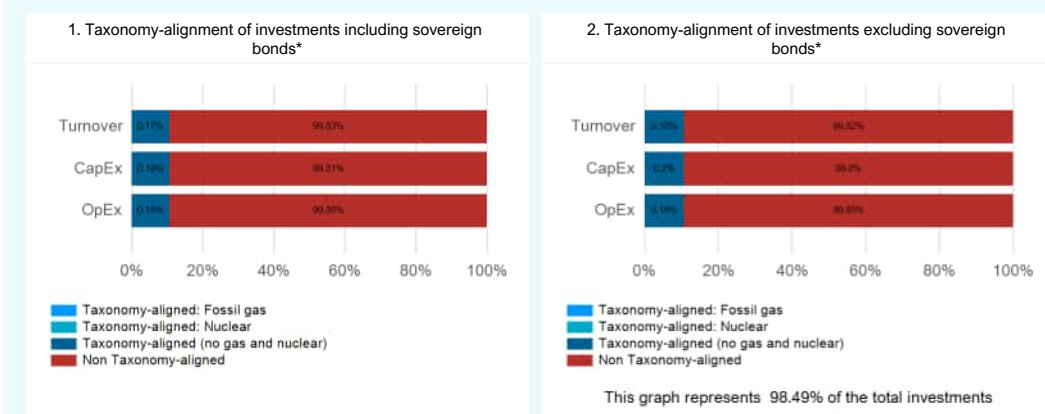

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

expenditure (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.49% based on Turnover, 0.62% based on CapEx and 0.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.52% based on Turnover, 0.66% based on CapEx and 0.43% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.87%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 22.2%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2055 Fund

Legal entity identifier:
254900MPPNN4DLXDKB92

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.32% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.41%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 87.38%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 55.32%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.87%

iv) the percentage of the fund invested in sustainable investments with a social objective: 22.18%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.39%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 51.1%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.95%

v) the percentage of the fund invested in sustainable investments with a social objective: 20.72%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 55.32% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Fidelity Institutional Liquidity Fund - A-ACC-USD	Open Ended Fund	1.06%	Ireland

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 55.32% in sustainable investments.

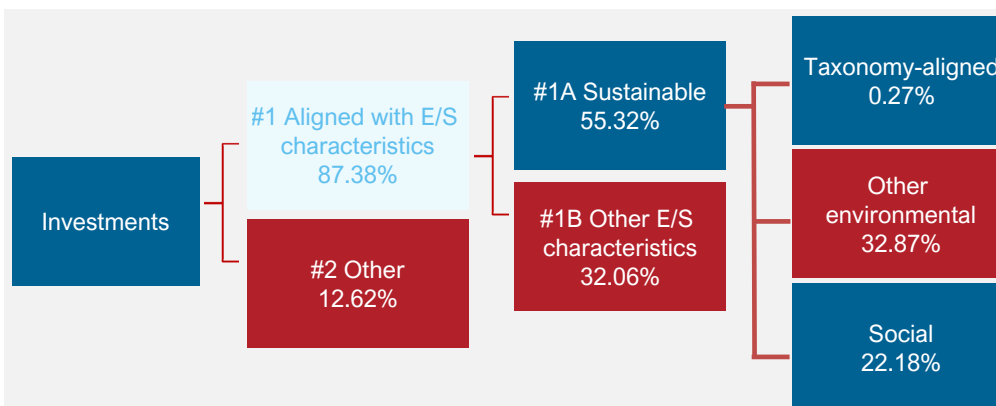

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.38%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 55.32% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 32.87% have an environmental objective (which is not aligned with the EU Taxonomy) and 22.18% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.17%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

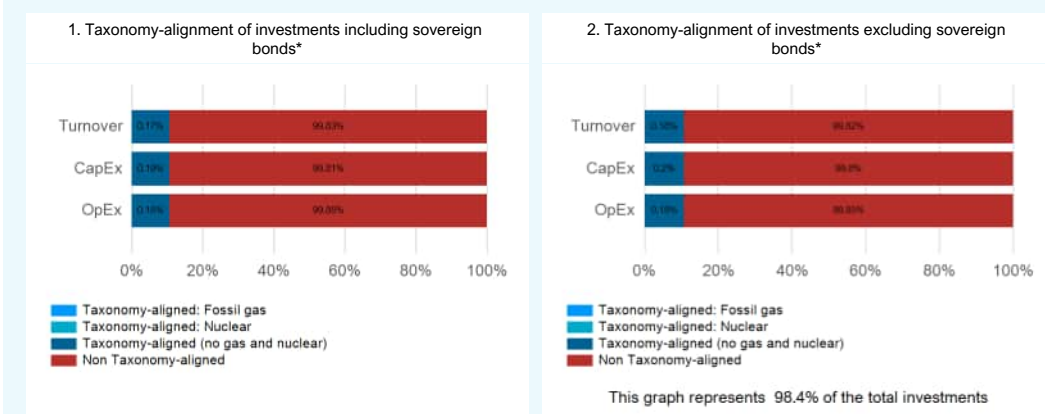

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

expenditure (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.49% based on Turnover, 0.62% based on CapEx and 0.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.53% based on Turnover, 0.67% based on CapEx and 0.43% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.87%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 22.18%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Fidelity Target TM 2060 Fund

Legal entity identifier:
2549004RGYR26MYR1T34

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.32% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing directly or indirectly in securities of issuers with favourable ESG characteristics and/or in UCITS and/or UCIs which either promote environmental/social characteristics or have a sustainable investment objective.

Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental

and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements. Environmental and social characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights. When investing in UCITS or UCIs managed by third parties, the fund relied on ESG methodology and exclusion policies used by third-party asset managers and index providers as well as their engagement and voting policies and practices.

The Fidelity multi asset ESG criteria required that a minimum of 70% of the fund's assets complied with the following:

- Direct securities with a Fidelity ESG rating of C or above (or in the absence of a Fidelity ESG rating, an MSCI ESG rating of BB or above);
- Internal investment strategies separately managed by Fidelity that have a Fidelity Multi Asset Manager Research ESG rating of C or above;
- Third-party managed UCITS or UCIs with a Fidelity Multi Asset Manager Research Rating of C or above, or a Fidelity ESG rating of C or above;
- Government debt securities that were subject to negative screening based on the Investment Manager's internal sovereign exclusion framework which concentrates on three principles relating to governance, respect for human rights and foreign policy. Sovereigns failing to meet the standards of the framework are identified based on a proprietary assessment. To support this assessment the Investment Manager makes reference to international recognised indicators such as the World Bank's Worldwide Governance Indicators and UN Security Council sanctions.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.42%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the investments of the fund which complies with the Fidelity multi asset ESG criteria: 87.39%

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 55.32%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 32.87%

iv) the percentage of the fund invested in sustainable investments with a social objective: 22.18%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.38%.

ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

iii) the percentage of the fund invested in sustainable investments: 51.1%

iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 29.94%

v) the percentage of the fund invested in sustainable investments with a social objective: 20.73%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 55.32% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

(a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:

(i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

(b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or

(c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;

provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.
- (vi) Investments in UCITS and UCIs - Fidelity referenced its Multi-Asset Manager ESG Ratings to determine and assess if certain UCITS or UCIs (managed by third party asset managers) were considering principal adverse impacts on sustainability factors. The fund relied on the consideration of principal adverse impacts on sustainability factors carried out by these UCITS or UCIs. For other UCITS or UCIs, including passively managed UCITS and UCIs, Fidelity considered principal adverse impacts on sustainability factors by assessing underlying holdings, when this data is made available.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Apple	Information Technology	4.07%	United States

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 55.32% in sustainable investments.

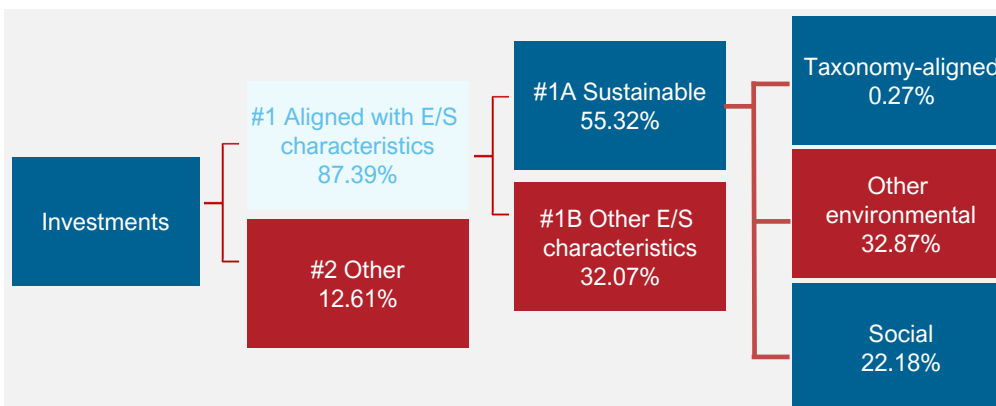

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 87.39%, which corresponds to the proportion of fund complying with the Fidelity multi asset ESG criteria. This included 55.32% in sustainable investments of which 0.27% have an environmental objective (which is aligned with the EU Taxonomy) and 32.87% have an environmental objective (which is not aligned with the EU Taxonomy) and 22.18% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.27%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.17%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

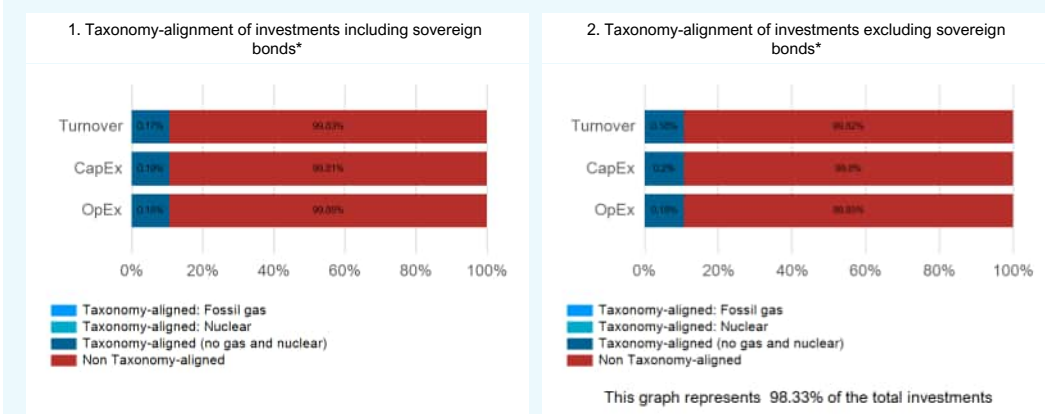

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

expenditure (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.14% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, not applicable as this fund was uplifted to an Article 8 fund in 23 January 2024

For the period 23 January 2024 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.49% based on Turnover, 0.62% based on CapEx and 0.4% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.53% based on Turnover, 0.67% based on CapEx and 0.43% based on OpEx.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.87%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 22.18%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by adhering to specific Fidelity multi asset ESG criteria which integrated minimum ESG ratings requirements.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Reference benchmarks are indexes to measure whether the financial products attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <div> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy </div> <input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 56.54% of sustainable investments <div> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective </div> <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024.
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025.

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 90.69%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.01 vs. 6.39

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 56.54%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 28.61%

iv) the percentage of the fund invested in sustainable investments with a social objective: 27.93%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 86.45%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 45.69%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 14.87%
- v) the percentage of the fund invested in sustainable investments with a social objective: 30.83%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 94.65%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 52.96%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 20.97%
- v) the percentage of the fund invested in sustainable investments with a social objective: 31.99%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 56.54% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Naspers	Consumer Discretionary	10.08%	South Africa
Taiwan Semiconductor Manufacturing	Information Technology	8.68%	Taiwan
HDFC Bank	Financials	3.84%	India
Samsung Electronics	Information Technology	3.7%	Korea (South)

Source of data: Fidelity International, as at 30 April 2025.

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 56.54% in sustainable investments.

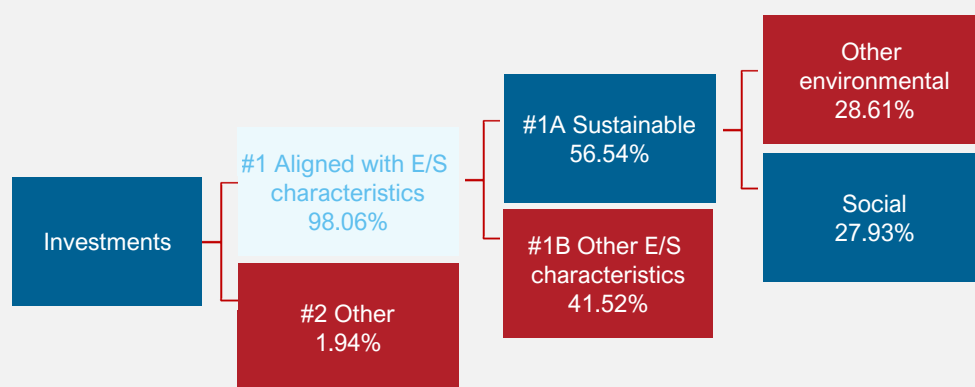

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.06%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 56.54% in sustainable investments of which 0% have an environmental objective (which is aligned with the EU Taxonomy), 28.61% have an environmental objective (which is not aligned with the EU Taxonomy) and 27.93% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Source of data: Fidelity International, as at 30 April 2025.

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0%
- 2) climate change adaptation: 0%
- 3) protection of water and marine resources: 0%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For

nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

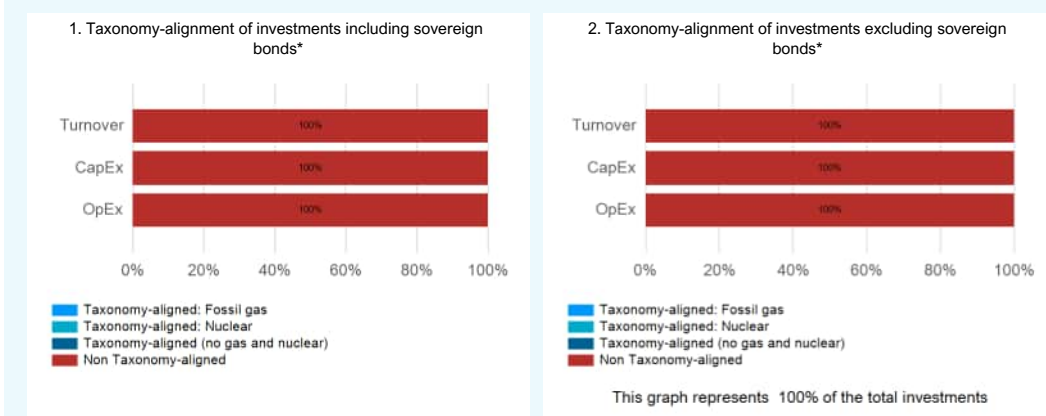

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0% for enabling activities, measured by Turnover.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.2% based on CapEx and 0.0% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.2% based on CapEx and 0.0% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.04% based on Turnover, 0.21% based on CapEx and 0.04% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.04% based on Turnover, 0.21% based on CapEx and 0.04% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 28.61%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 27.93%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Non Applicable

How did this financial product perform compared with the reference benchmark?

Non Applicable

How did this financial product perform compared with the broad market index?

Non Applicable

Periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
Fidelity Funds - Institutional Global Focus Fund

Legal entity identifier:
5493003YW9GXTX4AB509

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective ?	
<input checked="" type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 69.46% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With effect from 30 July 2024, the fund's approach towards promoting environmental and social characteristics was revised in accordance with the updated Fidelity Sustainable Investing Framework, as detailed in the fund's precontractual disclosure. Accordingly, where reporting values have been impacted by this update, values disclosed in this report will reflect the reporting period from 1 May 2024 to 30 July 2024 and additional information will be provided below covering the period from 31 July 2024 to 30 April 2025.

Based on this circumstance, this year's reporting was adapted as follows:

- the data 'Favourable ESG characteristics', which is typically reported as a quarterly average of the data at the end of the calendar, was adapted as at 30 July 2024
- the data 'ESG score', which is new data as from 31 July 2024, was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'sustainable investments' and its variations, was unchanged and was compiled based on the quarterly average of the data as at 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025
- the data 'top investments' and 'sector' were unchanged and reported as of the year end 30 April 2025

Prior to 30 July 2024, the fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy, efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

As from 31 July 2024, the fund met the environmental and social characteristics it promoted as

defined in the SFDR precontractual disclosure for the period. The fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than the ESG score of its benchmark.

ESG scores were determined by reference to ESG ratings. ESG ratings consider environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

ESG scores of individual securities were established by assigning set numerical values to Fidelity ESG ratings and ESG ratings provided by external agencies. These numerical values were aggregated to determine the average ESG score of the portfolio and that of the benchmark.

The weighted average ESG score of the fund's portfolio was measured against the ESG score of the benchmark using either a weighted average or equal weighted method of calculation. Further details on the calculation methodology are set out at [Sustainable investing framework](#) and may be updated from time to time.

The fund systematically applied the exclusions as defined in the SFDR precontractual disclosure.

How did the sustainability indicators perform?

For the period 1 May 2024 - 30 July 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 89.24%

For the period 31 July 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the ESG score of the fund's portfolio measured against the ESG score of its benchmark: 7.48 vs. 7.00

For the period 1 May 2024 - 30 April 2025, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

i) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.

ii) the percentage of the fund invested in sustainable investments: 69.46%

iii) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 41.06%

iv) the percentage of the fund invested in sustainable investments with a social objective: 28.25%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

... and compared to previous periods?

For the period 1 May 2022 - 30 April 2023, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 82.75%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 54.78%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 30.66%
- v) the percentage of the fund invested in sustainable investments with a social objective: 24.01%

For the period 1 May 2023 - 30 April 2024, the following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the fund:

- i) the percentage of the fund invested in securities of issuers with favourable ESG characteristics in accordance with the Fidelity's Sustainable Investing Framework: 86.56%.
- ii) the percentage of the fund invested in securities of issuers with exposure to the Exclusions: 0.00%.
- iii) the percentage of the fund invested in sustainable investments: 64.23%
- iv) the percentage of the fund invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy): 34.48%
- v) the percentage of the fund invested in sustainable investments with a social objective: 29.56%

These sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

While it did not have as its objective a sustainable investment, it had a proportion of 69.46% of sustainable investments. The sustainable investments had an environmental and social objective.

The fund determines sustainable investments as investments in securities of:

- (a) issuers making a substantial contribution through their economic activities (more than 50% for corporate issuers) to either:
 - (i) one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
 - (ii) environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
 - (b) issuers which contribute towards a decarbonisation objective consistent with maintaining the global temperature rise to below 1.5 degrees; or
 - (c) bonds which intend to use the majority of proceeds for specific activities, assets or projects that contribute to environmental or social objectives;
- provided they do not significantly harm any environmental or social objectives and that the investee companies follow good governance practices.

The contribution to the EU Taxonomy objectives is displayed under the question 'To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?'

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics. This included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators are used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available).

Issuers with a low overall score will be ineligible to be 'sustainable investments' unless Fidelity's fundamental research determine that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens will be applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, will not be considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors (referred to as principal adverse impacts) were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) ESG rating - Fidelity references ESG ratings which incorporate consideration of material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (ii) Exclusions - When investing directly in corporate issuers, the fund applied the Exclusions to help mitigate the principal adverse impacts through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC. Such exclusions included PAI indicator 4: Exposure to Companies active in the fossil fuel Sector, PAI indicator 10: Violations of UN Global Compact principles & OECD Guidelines for Multinational Enterprises and PAI indicator 14: Exposure to controversial weapons.
- (iii) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts and, in some circumstances, advocate for mitigating principal adverse impacts. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (iv) Voting - Fidelity's voting policy includes explicit minimum standards for board gender diversity and engagement with climate change for corporate issuers. Fidelity may also vote to help mitigate principal adverse impacts.
- (v) Quarterly reviews - discussion and review of principal adverse impacts through the fund's quarterly review process.

Fidelity took into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators were subject to data availability and may evolve with improving data quality and availability.

The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/05/2024 - 30/04/2025

Largest investments	Sector	% Assets	Country
Microsoft	Information Technology	7.25%	United States
Lam Research	Information Technology	5.3%	United States
Broadcom	Information Technology	4.81%	United States
ANSYS	Information Technology	4.55%	United States
Intuit	Information Technology	3.82%	United States
Adobe	Information Technology	3.76%	United States
Meta Platforms (A)	Information Technology	3.46%	United States
NVIDIA	Information Technology	3%	United States
Amazon.com	Consumer Discretionary	2.9%	United States
Blackrock	Financials	2.45%	United States
Airbus SE	Industrials	2.43%	France
Apple	Information Technology	2.39%	United States

Visa	Financials	2.05%	United States
HDFC Bank	Financials	2.02%	India

Source of data: Fidelity International, as at 30 April 2025

The largest investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The fund invested 69.46% in sustainable investments.

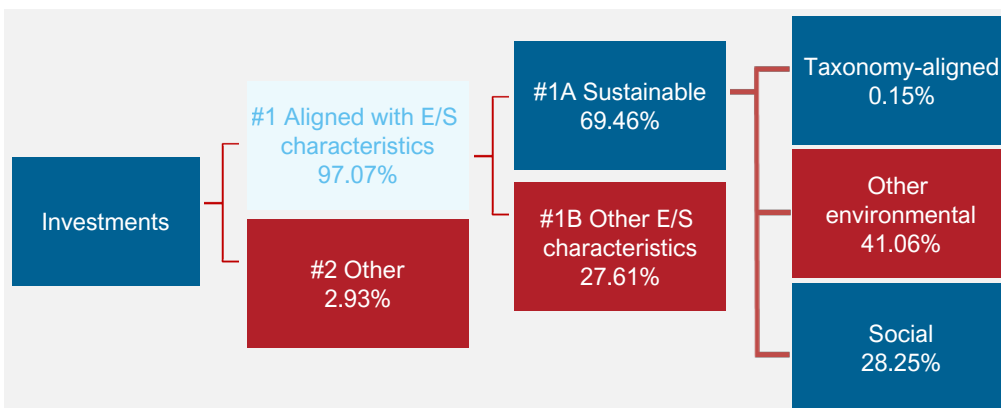

What was the asset allocation?

The proportion of the investments of the fund used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.07%, which corresponds to the proportion of fund achieving an ESG score of its portfolio greater than the ESG score of its benchmark. This included 69.46% in sustainable investments of which 0.15% have an environmental objective (which is aligned with the EU Taxonomy), 41.06% have an environmental objective (which is not aligned with the EU Taxonomy) and 28.25% have a social objective.

The EU Taxonomy data is sourced from a third-party data provider. The assessment on EU Taxonomy alignment is conducted with reported data from investee companies. The methodology applied by the third-party data provider assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards.

The remaining proportion of the investments is mainly used as described under the question: "What investments are included under " #2 Other", what is their purpose and are there any minimum environmental or social safeguards?"

This asset allocation, including the compliance to the EU Taxonomy, was not subject to an assurance provided by an auditor or a review by a third party.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Multiline Retail	3.95%
	Hotels Restaurants & Leisure	0.88%

Source of data: Fidelity International, as at 30 April 2025

The sector breakdown of the investments (excluding derivatives) and their classifications are based on official accounting data and are based on the last day of the reference period. Any percentage differences with the financial statement portfolios result from a rounding difference.

Due to data limitations, we are not able to disclose information on the proportion of investments on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. This is currently covered through a different fossil fuels grouping.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective aligned with the EU Taxonomy was 0.15%. This contributed to the following environmental objectives:

- 1) climate change mitigation: 0.09%
- 2) climate change adaptation: 0%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end

of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- 3) protection of water and marine resources: 0%
- 4) transition to a circular economy: 0%
- 5) pollution prevention and control : 0%
- 6) protection and restoration of biodiversity and ecosystems: 0%

The compliance of the investments of the fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties. The taxonomy alignment of the underlying investments of the fund is measured by turnover.

This is the first year we are including contributions to the EU Taxonomy's expanded environmental objectives, which now cover the protection of water and marine resources, transition to a circular economy, pollution prevention and control, and protection and restoration of biodiversity and ecosystems. To accommodate these additions, this year's reporting approach has been adjusted:

For 'climate change mitigation' and 'climate change adaptation', the approach was unchanged and data has been compiled based on the quarterly average of the data at the end of the calendar as of 31 July 2024, 31 October 2024, 31 January 2025 and 30 April 2025.

For the new objectives ('protection of water and marine resources,' 'transition to a circular economy,' 'pollution prevention and control,' and 'protection and restoration of biodiversity and ecosystems'), we have used the quarterly average of data as of 31 January 2025 and 30 April 2025 due to the limited timeframe that this data has been available.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

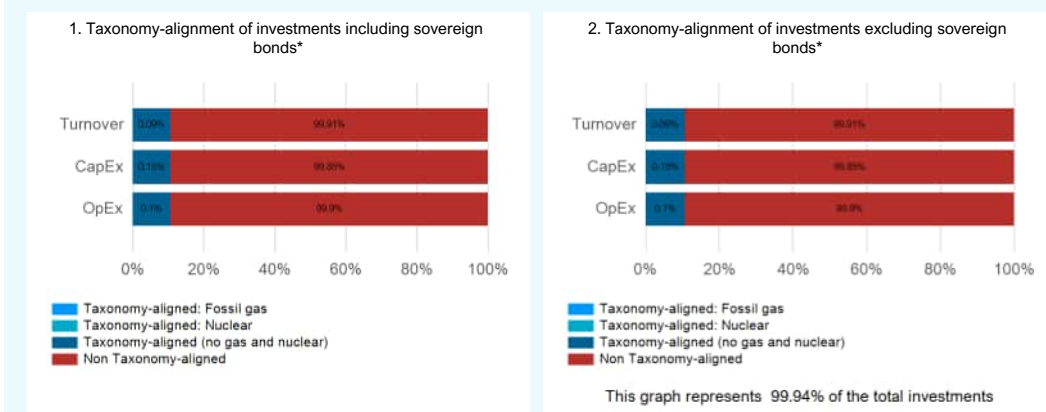

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Source of data: Moody's, quarterly average over the reference period.

The above data has been compiled through static data from our trading and compliance system and enriched through an external data source Moody's. The data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. There may be variations in the EU Taxonomy figures disclosed due to differences in the calculation methodology applied.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.08% for enabling activities, measured by Turnover.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

For the period 1 May 2022 - 30 April 2023, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.3% based on CapEx and 0.1% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.3% based on CapEx and 0.1% based on OpEx.

For the period 1 May 2023 - 30 April 2024, the quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.48% based on Turnover, 0.23% based on CapEx and 0.18% based on OpEx. The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.48% based on Turnover, 0.23% based on CapEx and 0.18% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The quarterly average share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 41.06%

Economic activities that are not recognised by the EU Taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

What was the share of socially sustainable investments?

The quarterly average share of sustainable investments with a social objective was 28.25%

This contributed towards the socially-focused SDG objectives, as explained in the answer on the objectives of the sustainable investments above.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the fund were invested in assets aligned with the financial objective of the fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The fund took the following actions to meet the environmental or social characteristics:

1. Until 30 July 2024, the fund invested in securities of issuers with favourable ESG characteristics.
2. Quarterly Sustainability Review to discuss and review the fund's qualitative and quantitative environmental and social characteristics.
3. The fund has applied the Exclusions.
4. As from 31 July 2024, the fund promoted environmental and social characteristics by aiming to achieve an ESG score of its portfolio greater than its benchmark.

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated to measure whether the fund attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Non Applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
