I Introduction

Fidelity Funds (the "Company") is an open-ended investment company established in Luxembourg as a société d'investissement à capital variable ("SICAV"). It has an umbrella structure and its assets are held in a number of different funds ("sub-funds"). Each sub-fund is a separate portfolio of securities and other assets managed in accordance with specific investment objectives. Separate classes of shares in the Company (the "Shares") are issued in relation to the sub-funds. Each sub-fund provides an investment opportunity in professionally managed pools of securities in different geographical areas and currencies, with the investment objective of capital growth, income or a balance between capital growth and income.

Shares are authorised for sale in a number of jurisdictions and may be listed on the Luxembourg Stock Exchange's Euro MTF market. However, shares in the Reserved Funds and the Institutional Reserved Funds are not presently listed. Further information on the stock exchange listings can be found on <https://www.bourse.lu/official list> or may be obtained from the Management Company upon request.

II Financial Statements

The Board of Directors of the Company (the "Board") submits its report and the audited financial statements for the year ended 30 April 2025. The audited financial statements are set out on pages 153 to 736 of this Annual Report, with results for the year appearing in the Statement of Operations and Changes in Net Assets on pages 616 to 640. Dividend information for the sub-funds is detailed on pages 687 to 725.

A copy of the Annual Report can be found on the Fidelity website. A hard copy of the Annual Report may be obtained upon request from either the offices of the companies registered as distributors or from the Registered Office of the Company.

Comparative figures for the previous year can be found in the Annual Report of the Company for the year ended 30 April 2024.

III Activities during the year

During the year, the company followed the normal activities of an open-ended investment company. The Investment Manager's Report that follows gives an overview of performance. As at 30 April 2025, the number of registered Shareholders worldwide totalled 10,201. However, the total number of investors in the Company is significantly greater than the number of registered Shareholders due to certain registered Shareholders representing the holdings of many underlying clients. Assets under management as at 30 April 2025 exceeded USD 146 billion.

The Directors may from time to time close sub-funds as well as launch further sub-funds with different investment objectives, subject to the approval of the Commission de Surveillance du Secteur Financier ("CSSF").

At the year end, the Company consisted of 128 active sub-funds.

Details of changes to the range of sub-funds during the year are provided in the Notes to the Financial Statements on pages 674 to 736.

IV Board of Directors

The Directors of the Company as at 30 April 2025 are listed on page 5. Eight of the nine Directors serving as at 30 April 2025 are considered non-executive Directors, three of whom are considered by the Board to be independent of the Investment Manager and free from any other relationship which could materially interfere with the exercise of their independent judgement.

There have been the following changes to the Board during the year to 30 April 2025:

- Mr Nishith Gandhi resigned from his role of permanent representative of FIL (Luxembourg) S.A., Corporate Director of the Company, effective as of 31 December 2024.
- FIL Holdings (Luxembourg) S.à r.l. was appointed as Corporate Director of the Company on 24 January 2025 and is represented by its permanent representative, Mr Christopher Brealey.

V Management of the Company

FIL Investment Management (Luxembourg) S.à r.l. ("FILMILUX") as the Management Company is responsible for the investment management, administration and distribution functions of the Company. FILMILUX may delegate part or all of such functions to third parties, subject to overall control and supervision. With the consent of the Company, FILMILUX has delegated the investment management function to FIL Fund Management Limited ("FFML") and the distribution function to FIL Distributors ("FID").

FILMILUX provides services to the Company in connection with keeping the Company's accounts, determination of the Net Asset Value of shares in each sub-fund on each Valuation Date and dispatch of dividend payments.

FILMILUX is responsible for the production of the Annual Report and Accounts of the Company for each financial year, which are required under general principles to give a true and fair view of the state of affairs of the Company. In accordance with those same principles, FILMILUX is responsible for:

- selecting suitable accounting policies and applying them consistently;
- preparing the Annual Report and Accounts on a going concern basis;
- maintaining proper accounting records which disclose at any time the financial position of the Company; and
- complying with both the Luxembourg Law of 10 August 1915 on commercial companies, as amended, and the Luxembourg Law of 17 December 2010, as amended, on undertakings for collective investment.

The Directors of the Management Company as at 30 April 2025 are also listed on page 5.

There has been the following change to the Directors of the Management Company during the year ended 30 April 2025.

- Ms Sera Sadrettin has tendered her resignation from her role as Director of the Management Company, effective as of 31 January 2025.

Conducting Officers

As at 30 April 2025 the Conducting Officers ("COs") appointed by FIMLUX were as listed on page 5.

There have been the following changes to the COs of FIMLUX during the year ended 30 April 2025:

- Ms Corinne Lamesch has tendered her resignation from her role as Conducting Officer ("CO") of FIMLUX, effective as of 31 August 2024.
- Ms Eliza Dungworth has been appointed as CO of FIMLUX, effective from 1 September 2024.
- Mr Stephan von Bismarck has tendered his resignation from his role as CO of FIMLUX, effective as of 31 October 2024.
- Ms Sylviane Kerzerho has been appointed as CO of FIMLUX, effective from 01 November 2024.

Conducting Officers' Responsibilities

The COs have a duty to ensure that the tasks delegated to FFML and to FID as well as the administrative functions carried out by the Management Company are performed in compliance with Luxembourg Law, the Company's Articles of Incorporation and the current Prospectus. Amongst other things, the COs ensure compliance with the investment restrictions of the Company and oversee the implementation of the investment policy of each sub-fund by the appointed Investment Manager.

The Management Company and/or the COs report to the Board on a quarterly basis and the COs inform the Management Company and the Board without delay of any materially adverse matters resulting from the actions of the Investment Manager, the General Distributor or of the Management Company in relation to the administrative functions.

VI Role of Investment Manager and Central Administrative Agent

FFML provides day-to-day investment management to the Company, under the supervision and subject to the control of the Board and FIMLUX. FFML is authorised to act on behalf of the Company and to select agents, brokers and dealers through whom to execute transactions and is required to provide the Board and FIMLUX with any reports it may require.

FFML may receive investment advice from, and act upon the advice of, any company within the holding company FIL Limited ("FIL"), including affiliate companies of FFML, and may execute, transact and otherwise carry out its functions, duties and obligations with or through any of these Fidelity companies. FFML remains responsible for the proper performance by such companies of those responsibilities.

The duties of the Investment Manager include the design, implementation and maintenance of controls and procedures to administer the assets of the Company and to manage its affairs properly. The process extends to operational and compliance controls and risk management. In addition, the Company and FIMLUX have appointed FIL to provide services in relation to the investments of the sub-funds including valuation, statistical, technical, reporting and other assistance.

VII Corporate Governance

The Board applies a clear and transparent corporate governance framework for the management of the Company's affairs.

1. The Board has adopted the principles of good governance as set out in the ALFI (Association of the Luxembourg Fund Industry) Code of Conduct updated and reissued in 2022 and considers that the Company has been in compliance with it in all material respects throughout the financial year ended 30 April 2025.
2. There are contractual arrangements in place governing the relationships with FIMLUX, FFML, FID and FIL as well as other third party suppliers to the Company.
3. The Directors take decisions in the interests of the Company and its Shareholders and refrain from taking part in any deliberation or decision which creates conflict between their personal interests and those of the Company and its Shareholders.
4. The Board meets at least four times a year. The Board requests and receives reports from the COs, FIMLUX, FFML, and FID on the various activities including compliance controls and risk management undertaken by the relevant FIL companies. Senior representatives of FIMLUX, FFML and FID attend meetings by invitation, thus enabling the Board of Directors to question the reports presented to it.
5. As part of the control framework within FIL, all FIL group employees are subject to the FIL Code of Conduct and its associated policies, which, amongst other things, set out procedures for personal account dealing in securities. The Board receives regular reports from the FIL Ethics Office on Employee Personal Trading to ensure that any conflicts of interest between personal accounts dealing by FIL group staff and the interests of the Company are properly managed.
6. The nomination of new Directors is considered by the Board and is subject to the approval of the CSSF and ultimately the approval of Shareholders at the Annual General Meeting. The level of Directors' fees is put to Shareholders for approval, in accordance with the Articles of Incorporation. Directors who are employed by FIL or its subsidiaries, its holding company FIL, or its subsidiaries have waived their fees for the year ended 30 April 2025. For those Directors that have not waived their fees, the remuneration earned for the year ended 30 April 2025 was in aggregate USD 490,233 subject to Shareholder approval, as set out on page 682 of this Annual Report. For comparison purposes the EUR equivalent was EUR 432,000.
7. The Directors are committed to ensuring that Shareholders are kept informed of matters relevant to their investment and that all Shareholders are treated fairly. The maintenance and integrity of information concerning the Company on the Fidelity website is the responsibility of FIL. FIMLUX is responsible for the accuracy of translations of documents which may be available to investors in languages other than English. The Directors consider and, if thought fit, approve the English form of the financial statements presented to them at the relevant Board meetings.

VIII Other Information

Proxy Voting

FFML has a policy of voting on equity securities where it is possible to do so, unless the loss of liquidity as a result of attendant share blocking is deemed to outweigh the expected benefits to be gained. Such voting is undertaken in accordance with written proxy voting guidelines employed by the FIL group, of which FFML is a part, and takes account of prevailing local market best practices. The Board of the Management Company reviews and adopts the proxy voting policy, activity and guidelines annually. FIL's Principles of Ownership, which summarises how FIL engages with companies in which the Company's sub-funds have invested, can be accessed from the Corporate Governance section of FIL's website (<https://www.fidelityinternational.com>).

Commissions and Internal crossing

FFML uses supplemental research in the course of its work for the Company and other clients provided by brokers through whom the Investment Manager executes transactions for the Company and other clients. All dealing commission paid by the Company and other clients on trades with brokers account only for the costs of executing the trade. All supplemental research used by the Investment Manager is valued and paid for separately from execution and other relationships with brokers in accordance with inducement regulations.

The Company participates in the Investment Manager's interfunding programme whereby FIL's traders, on occasion, identify situations where an account or sub-fund managed by FIL is buying the same security that another account or sub-fund is selling. If a trader can confirm that it would be in the interests of both accounts to execute a transaction between them rather than in the market then an interfund transaction is executed. These transactions amounted to USD 442,545,210 during the year under review.

Swiss investors

Swiss investors are advised that with the exception of Asia Equity II ESG Fund, Asia Pacific Multi Asset Growth & Income Fund, Multi Asset Target Income 2024 Fund, Greater China Fund II, Sustainable Biodiversity Fund, Strategic European Fund, Institutional European Larger Companies Fund, the Institutional Target Funds, the present sub-funds of the Company have been authorised by the Swiss Financial Market Supervisory Authority for distribution in Switzerland.

IX Business of the Annual General Meeting

The Board of Directors is proposing the following resolutions be put to the Shareholders at the Annual General Meeting of the Company to be held on 3 October 2025 at noon:

- the presentation of the Report of the Board of Directors;
- the presentation of the Audit Report;
- the approval of the Statement of Net Assets and Statement of Operations and Changes in Net Assets for the year ended 30 April 2025;
- the discharge of the Board of Directors;
- the election/re-election of Directors;
- the approval of the payment of Directors' fees;
- the re-election of the external Auditor;
- the approval of the payment of dividends; and
- consideration of such other business that may properly come before the Annual General Meeting under the Articles of Incorporation.

BOARD OF DIRECTORS

FIDELITY FUNDS

29 July 2025

This Annual Report of the Company does not constitute an offer of shares. Shares are offered on the basis of the information contained in the current Prospectus (and the documents referred to within it) supplemented by the last available Annual Report of the Company and any subsequently published Semi-Annual Report. Copies of the current Prospectus, latest Annual and Semi-Annual Reports and Portfolio Changes for the Company are available free of charge from the registered office of the Company or from any of the companies registered as distributors of the Company, or, for investors in Switzerland, from the Representative of the Company in Switzerland.

This Annual Report has been approved for circulation in the United Kingdom by FIL Investments International, UK distributor of the Company, authorised and regulated in the UK by the Financial Conduct Authority.

Equity Markets

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the Bank of Japan (BoJ) in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Federal Reserve (Fed)'s cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs.

Source: Refinitiv DataStream, Total Returns (%), USD, 30.04.2024 - 30.04.2025

Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan. Meanwhile, returns in US dollar terms were supported due to the currency's depreciation against the euro, the yen and sterling.

European equity markets delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election in the US, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators and corporate resilience. In response to easing inflation and subdued growth, the European Central Bank (ECB) reduced its key rates by 25 basis points (bps) in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election result was tempered by renewed tariff threats targeting European Union imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology sector valuations after the launch of DeepSeek's artificial intelligence (AI) model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets. While the second quarter of 2025 began with a pullback due to newly announced US trade tariffs and reciprocal measures, losses were quickly recovered amid hopes for negotiations and a 90-day tariff implementation pause. Despite lingering uncertainty, stronger-than-expected eurozone GDP growth and a rotation into domestically focused companies—seen as more insulated from external trade risks—helped to sustain overall market gains.

UK equities performed strongly in 2024 and continued their advance in 2025, overcoming spells of volatility, while remaining sensitive to inflation, interest rate dynamics and trade policy developments. The period started on a strong note as central banks signalled that interest rates were approaching their peak, with inflation in the UK gradually moving closer to the Bank of England (BoE)'s 2% target, driving the FTSE All-Share to record highs in May 2024. In a notable shift, the BoE in July reduced its policy rate by 25 bps to 5.0%, its first rate cut in over four years. However, market confidence was subsequently tested by concerns over a potential recession in the US and the unwinding of yen carry trades following the BoJ's unexpected interest rate hike. Domestic challenges like slowing economic activity also added to the uncertainty. However, these concerns proved to be short-lived as markets found support in the accommodative messaging from central banks and fresh stimulus measures in China. October's budgetary announcement, while having a limited direct effect on equities, influenced the UK's government bond market as plans for additional borrowing were unveiled. Meanwhile, the BoE continued its easing cycle with another 25 bps cut in November and February, respectively. 2025 began on a strong note as UK markets responded favourably to Donald Trump's decisive election victory. Investors sought diversification opportunities away from US technology stocks, which had been affected by the rise of Chinese startup DeepSeek's efficient AI model that put the spotlight on elevated technology valuations. UK equities continue to remain at a significant valuation discount and has helped to underpin market strength. April was another extraordinary month, marked by heightened market volatility following the US's reciprocal import tariff announcements. While the UK was subjected only to a baseline 10% duty on its exports to the US, it was notably exempt from the additional punitive levies, which was viewed as a constructive outcome.

US equities rose over the 12-month period. In the period ending December 2024, companies having strong ties to AI or perceived as beneficiaries of the AI theme performed strongly. Resilient economic data, robust corporate earnings and easing monetary policy by major central banks supported markets. However, US equities saw a period of significant volatility during last summer as surprisingly weak economic data combined with the BoJ's

rate hike led to a sharp sell-off in markets. Nevertheless, markets quickly recovered as economic data picked up and the US exceptionalism narrative prevailed. Since January 2025, US markets have entered a period of increased volatility. Equities had a strong start to the year, reflecting optimism around the new administration's promises of deregulation and tax cuts, and a strong start to the earnings season. However, markets became volatile at the end of January, as the heavy concentration in highly valued technology stocks weighed on performance in the wake of China's DeepSeek claiming the development of efficient low-cost AI models. Since then, volatility has continued as markets digested the implications of rising trade tensions between the US and the rest of the world. Over the year, all sectors, except energy and materials, gained, with financials and utilities seeing the strongest performance.

The Japanese equity market fell slightly during the period as concerns over US tariffs and their impact on the global economy weighed on investor sentiment in the first quarter of 2025. The second half of 2024 also saw pockets of profit taking and a strengthening yen, which weighed on overall market returns. Earlier in the review period, the market was driven primarily by central bank policy expectations, centred on the BoJ and the US Fed. The fiscal 2024 third-quarter earnings season concluded in February, with aggregate results exceeding market expectations. In macroeconomic news, the BoJ's key short-term interest rate stood at 0.5% at the end of the review period, the highest level since 2008. Meanwhile, Japan's Prime Minister Fumio Kishida announced that he would step down as leader of the ruling Liberal Democratic Party. Former Defence Minister Shigeru Ishiba unexpectedly won the leadership election and, despite initial speculation to the contrary, appeared set to maintain the key policies of the Kishida administration, namely overcoming deflation and raising wages. At a sector level, communication services and financials led the gainers, while materials, energy and utilities were the leading decliners.

Equities in the Pacific ex Japan region maintained their upward momentum over the period. Stimulus measures announced by China reflected a strong commitment to boosting domestic demand, aimed at driving economic recovery, earnings growth, and market sentiment. Internet and technology names in China experienced a strong rally during the period, driven by investor optimism around AI startup DeepSeek. This growth helped to offset some of the broader economic concerns in China's real estate sector. Meanwhile, technology-focused Taiwanese market remained resilient, driven by sustained AI-related memory chip demand. Elsewhere, India's robust economic growth continued to fuel domestic stock performance, reinforcing investor confidence. Australian equities also delivered solid returns, benefitting from strong corporate earnings and stable commodity prices. Towards the end of the period, tariff-driven volatility emerged as a key concern, particularly following escalating trade tensions between the US and China. Nevertheless, subsequent discussions around negotiations helped to ease some of the tensions.

Emerging markets (EMs) posted positive returns during the period. The period was marked by volatility as markets globally grappled with shifting expectation on monetary policy, a busy election period (in both the US and EMs), and stimulus announcements in China in 2024. The year 2025 brought some relief rally in China and some Latin American economies. There was some pull back in performance towards the end of the period after the US imposed sweeping reciprocal tariffs on 2 April 2025, although markets experienced some relief after a 90-day pause was announced for most countries, barring China.

Earnings outlook remains positive despite tariff concerns

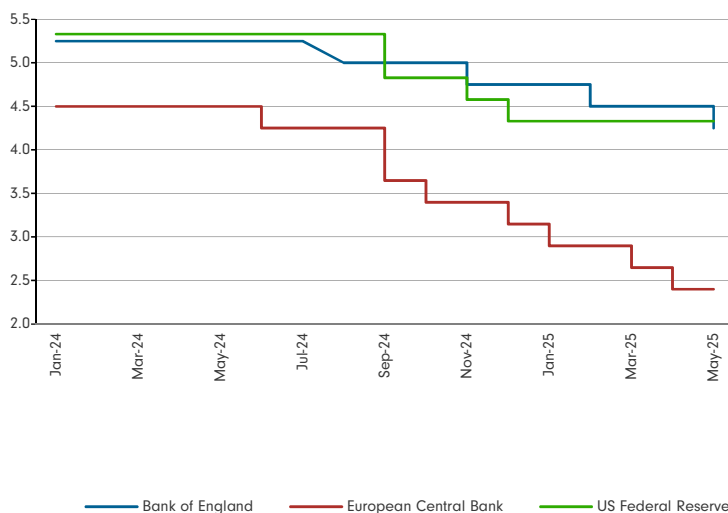

Source: IBES, LSEG DataStream, 30.04.2025. Data for MSCI Indices

The first quarter earnings season has almost concluded in the US and a solid 72% of S&P 500 companies managed to beat earnings estimates. The S&P 500 index is now trading at a price-earnings ratio of around 20-21x, which is close to the 10-year average of 19x. However, this earnings season was notable as many companies declined to provide forward guidance or only provided it for the next quarter rather than the full year, indicating that businesses clearly feel uncertain of the outlook. The outlook for the economy from here is key to the longer-term trajectory of equity markets. Sentiment and survey data have declined, but this has not yet fed into hard data. It is also probably too soon to see any real impact of tariffs on macroeconomic statistics.

Bond markets

Global fixed income markets delivered positive returns despite elevated volatility, driven by shifting monetary policy expectations, inflation uncertainty, and escalating geopolitical tensions. US Treasuries outperformed German government bonds (Bunds) and UK government bonds (Gilts), supported by demand for safe-haven assets amid global instability. In mid-2024, strong economic data and sticky inflation delayed rate cuts, but softening macro indicators later in the year triggered synchronized easing by major central banks. The Fed cut rates in September, November, and December; the ECB delivered steady 25 bps reductions from June 2024 to April 2025; and the BoE eased policy three times before pausing in April due to climbing inflation. Strong US labour and inflation data late in 2024 led markets to reassess the pace of further easing, pushing yields higher. In early 2025, geopolitical risks took the centre stage. The Trump administration's tariffs on Canada, Mexico, and later Chinese industrial imports sparked fears of a renewed trade war, prompting retaliatory actions from China, and underpinning rotation into safe-haven securities. US Treasury yields declined despite robust domestic data, while Bund yields rose on Germany's proposed debt brake suspension and a 500-billion-euro fiscal plan. UK Gilts were volatile due to persistent inflation, rising borrowing, and political uncertainty. The tariffs unveiled on Liberation Day, 2 April, led to escalation in trade conflict, further boosting demand for core sovereigns. Corporate credit spreads widened globally on higher risk premia, with investment-grade and high-yield bonds posting modest gains, but underperforming sovereigns amid weaker risk appetite.

Interest rates trajectory for major central banks.

Source: Bloomberg, 30.04.2025

Against this backdrop, the Fed faces an increasingly complex policy environment. Inflationary pressures have been exacerbated by tariffs, although Fed Chairman Jerome Powell has described these developments as 'potentially transitory'. Internally, the Federal Open Market Committee is divided: some members favour tightening of policy, calling for a delay in further easing until the labour market shows clear signs of weakness, while others advocate for proactive cuts to prevent a broader economic deterioration. The Fed has signalled a wait-and-see approach as it assesses the cumulative impact of tariffs, immigration policies, and fiscal developments. Given these crosscurrents, the threshold for further rate cuts remains high, and we believe there is a growing possibility that the Fed may keep rate cuts on hold through the rest of 2025.

1. These sub-funds have not been authorised by the Swiss Financial Market Supervisory Authority (FINMA) and have therefore not been approved for distribution in Switzerland.

2. These sub-funds with substantial Chinese exposure were closed from 30 April to 3 May 2024 due to China national holidays. During this period, these sub-funds were closed for dealing and any published non-official Net Asset Value were based on the final issued Net Asset Value prior to the closure. The Net Asset Values as at 30 April 2024 disclosed in the financial statements have been fair valued.

3. These sub-funds have not been notified for marketing in Germany and the shares of these sub-funds may not be marketed to investors in Germany.

4. These sub-funds are not authorised by the Securities & Futures Commission in Hong Kong and may not be promoted or offered to the public in Hong Kong.

5. These sub-funds have not been authorised by the "Finanzmarktaufsicht" (Austrian Financial Market Authority) and have therefore not been approved for distribution in Austria.

6. These sub-funds are authorised by the Securities and Futures Commission in Hong Kong under the Securities and Futures Commission Code on Unit Trusts and Mutual Funds and not under the Securities and Futures Commission Code on Real Estate Investment Trusts. Such authorisation does not imply official recommendation.

7. This sub-fund can invest in Indian equity securities through a wholly-owned Mauritian subsidiary, FIL Investments (Mauritius) Limited. As at year end the Mauritian subsidiary only held cash.

8. These sub-funds are defined as Article 8 sub-funds as per Sustainable Finance Disclosure Regulation ("SFDR"). SFDR refers to the regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector. Article 8 sub-funds seek to achieve their investment objectives while promoting, among other characteristics, environmental or social characteristics, or a combination of those characteristics. Information on the environmental/social characteristics for the sub-funds disclosing under Article 8 of SFDR, is made available in the annex to the unaudited section of the annual report.

9. These sub-funds are defined as Article 9 sub-funds as per SFDR. Article 9 sub-funds have sustainable investment as their objective. Information on sustainable investments for the sub-funds disclosing under Article 9 of SFDR is made available in the annex to the unaudited section of the annual report.

Within the meaning of SFDR, the others sub-funds are defined as Article 6 and do not promote environmental and/or social characteristics nor have a sustainable investment as its objective as at year end.

Please note that not all countries of distribution have been disclosed in the above footnotes. For a complete list please refer to the prospectus.

Performance notes on Fund Reviews

Cumulative Returns are calculated from published Net Asset Value price to published Net Asset Value price with gross income reinvested on ex-dividend dates. For sub-funds where the price adjustment policy has been applied as per note 2 on page 676, the Cumulative Returns are calculated to or from the adjusted Net Asset Value price.

This calculation does not include any initial charge, and represents the true investment performance of the sub-fund.

The performance figures reported under the column "Since Launch" in the tables are calculated from the commencement of operations until 30 April 2025.

Annualised performance is an alternative way of expressing a sub-fund's total return. It assumes a steady compound rate of growth during the period in question and is not the sub-fund's year by year performance, which fluctuated over the periods shown.

Please note that the Manager's Overviews are based on the first Share class disclosed for each sub-fund. Performance data is expressed in the Share class currency of denomination, indicated by the ISO code shown.

FUND SIZE AS AT 30.04.2025 : USD 5 MILLION

Manager's Overview

Chinese stocks advanced, on the back of the Chinese government's coherent stimulus measures aimed at revitalising its economy and improving fundamentals. The prospect of China's AI development following the release of local startup DeepSeek's cost-effective AI model, and its wide applications across various industries, significantly enhanced investor confidence in the technological capabilities of Chinese firms, and this led to a revaluation of Chinese assets.

The fund underperformed the comparative index over the period. Holdings within the information technology sector detracted from performance, as well as positions in consumer discretionary. On a more positive note, investments in the health care sector contributed to returns, alongside value added through an underweight position in the energy sector. Underweight allocations to Xiaomi and Industrial & Commercial Bank of China, as well as the position in New Oriental Education & Technology Group, were the notable detractors, while Mao Geping Cosmetics, Hansoh Pharmaceutical Group, and Shanghai Chicmax Cosmetic contributed positively.

The managers focus on selecting quality companies with sustainable growth prospects and seek opportunities from entities that believe in a sustainable planet, lives, and enterprises. They integrate environmental, social and governance (ESG) factors into their investment decisions, actively exercising their role as owners as they aim to achieve long-term capital growth, while promoting sustainability characteristics and contributing to a sustainable future. Selected consumer and industrials stocks are among the key holdings in the portfolio. Alibaba Group Holding is preferred for its robust position in the e-commerce sector and due to growth prospects of its cloud business. Contemporary Amperex Technology, one of the largest manufacturers of lithium-ion batteries for electric vehicles globally, and China Merchants Bank, a leading retail-oriented bank in China, are the other key positions in the portfolio.

FUND SIZE AS AT 30.04.2025 : USD 3,007 MILLION

Manager's Overview

US equities fell over the period. In the period through to the end of December 2024, companies with strong ties to AI and their perceived beneficiaries performed strongly. Markets were supported by resilient economic data, robust corporate earnings and easing monetary policy. However, US equities witnessed a period of significant volatility during third quarter last summer as surprisingly weak economic data combined with the Bank of Japan's rate hike led to a sharp sell-off in markets. Nevertheless, markets quickly recovered as economic data picked up and the US exceptionalism narrative prevailed. Since the turn of the year, US markets again saw volatility. Equities started strong, reflecting optimism around the new administration's promise of deregulation and tax cuts and a strong start to the earnings season. However, there was a market sell off at the end of January, as the heavy concentration in technology stocks weighed on performance in the wake of DeepSeek's claims on the development of efficient low-cost AI models. Since then, volatility continued given concerns over rising trade tensions between the US and key trading partners. Over the year, all sectors except energy and materials gained, with financials and utilities gaining the most.

The fund underperformed the comparative index over the period. Position in managed care company Elevance Health declined sharply after the company missed third-quarter results. Earnings came in below consensus estimates driven by lower than estimated Medicaid rates. However, management remained optimistic and guided towards increase in market share and margins in the coming year. Holding in life sciences tools company Bruker detracted from returns over the period, led by disappointing financial results and margin pressures from its acquisitions. Shares were also impacted by announcements that the grant process for scientific research has been put under review in the US, creating uncertainty over the availability of future funding. Meanwhile, discount retailer Dollar Tree detracted. Shares fell sharply driven by weaker-than-expected second-quarter results, attributed to strong competition from Walmart, its Family Dollar business underperforming and signs of fragility in the low-income consumer. Hence the position has been exited. The off-benchmark position in Samsung Electronics fell amid declining profits, labour disputes, and lagging in AI adoption across its suite of services and therefore was subsequently removed from the portfolio. The off-benchmark positions in gas exporter Cheniere Energy, club operator BJS Wholesale Club and gold mining company Agnico Eagle Mines supported relative performance. Shares of Cheniere Energy advanced following solid financial performance in the third quarter of 2024, and later in January 2025, amid news of increased LNG exports and strategic international partnerships. BJS Wholesale shares gained as the company delivered strong fourth-quarter and full year 2024 results, beating estimates. Agnico Eagle Mines rose due to strong financial performance and strategic acquisitions, particularly the acquisition of O3 Mining. This was further boosted by increased gold prices, operational efficiency, and the company's focus on growth projects.

The managers focus on investing in good quality companies that are mispriced, either because they are out of favour or their intrinsic asset value is misunderstood, or their journey to sustainability is underappreciated. Stock-picking is at the core of their approach and is the main driver of risks and returns, alongside their value biased investment style. Portfolio holdings are differentiated from the index which is reflected in high active share. The managers bought positions in oil and gas company Diamondback Energy and banking group PNC Financial Services. Holdings in semiconductor company Qualcomm and consumer computing company Samsung Electronics were sold.

FUND SIZE AS AT 30.04.2025 : USD 882 MILLION

Manager's Overview

US equities rose over the period. In the period through to the end of December 2024, companies with strong ties to AI and their perceived beneficiaries performed strongly. Markets were supported by resilient economic data, robust corporate earnings and easing monetary policy. However, US equities witnessed a period of significant volatility during the third quarter last summer as surprisingly weak economic data combined with the Bank of Japan's rate hike led to a sharp sell-off in markets. Nevertheless, markets quickly recovered as economic data picked up and the US exceptionalism narrative prevailed. Since the turn of the year, US markets again saw volatility. Equities started strong, reflecting optimism around the new administration's promise of deregulation and tax cuts and a strong start to the earnings season. However, there was a market sell off at the end of January, as the heavy concentration in technology stocks weighed on performance in the wake of DeepSeek's claims on the development of efficient low-cost AI models. Since then, volatility continued given concerns over rising trade tensions between the US and key trading partners. Over the year, all sectors except energy and materials gained, with financials and utilities gaining the most.

The fund underperformed the comparative index over the period. Stock selection in professional services mainly dragged on returns: our off-benchmark position in FTI Consulting fell after a third-quarter earnings miss, lower guidance, project completions and senior departures. Despite near-term headwinds, the firm remains a leader in specialised consulting with attractive longer-term opportunities in restructuring, and mergers and acquisitions. CDW also detracted as softer customer spending, macroeconomic uncertainty, and a subdued outlook overshadowed a modest earnings beat and strong first-quarter trading. We remain constructive given favourable end-markets, capable management and an undemanding valuation. Viatris declined after an FDA review of an Indian plant prompted a short-term earnings miss and guidance cut. We expect the issue to be resolved in the coming months, supporting a recovery in the shares. Positive selection in metals & mining, healthcare equipment and capital markets partly offset these headwinds. Wheaton Precious Metals and Agnico Eagle Mines benefitted from higher gold prices in a risk-averse environment. Medical devices maker Boston Scientific gained on sustained innovation, robust results, and the completion of the Axonics acquisition. The off-benchmark holdings in Virtu Financial and Tradeweb Markets advanced on continued strong execution and favourable sentiment towards electronic trading.

The manager seeks to invest in stocks with a strong long-term growth outlook, backed by structural tailwinds that are likely to prevail in a range of macroeconomic scenarios. The fund has a mid-cap bias. Positioning is differentiated relative to peers given their disciplined approach to free cash flow generation. Bottom-up stock selection, backed by detailed fundamental research, produces a portfolio that can deliver strong long-term outcomes, which should benefit long-term investors. The investment strategy is driven by long-term cycles and secular themes. The fund's current positioning is aligned with four themes: mobility, demographics, electrification and automation, which should play out over the economic cycle.

Manager's Overview

Equities in the ASEAN region gained over the period. Singapore and Malaysian equity markets delivered robust returns. Strong GDP data proved to be beneficial for Singapore, while Malaysia attracted investors who were tracking the growth in technology-sector focused "China plus one" investments in ASEAN. Malaysia's economy continued to expand, driven by the ongoing broad-based recovery among key sectors, including manufacturing, construction, and services which also benefitted from a rise in "China plus one" investment. In addition, equities in the Philippines and Thailand advanced. However, markets in Indonesia were caught amid concerns about significant policy announcements by the new Prabowo government, including a major fiscal restructuring, the setup of Danantara (a new sovereign wealth fund) and the possibility of a cabinet reshuffle.

The fund underperformed the comparative index over the period. Selected holdings in Thailand negatively impacted performance, while stock selection in Malaysia partially offset these losses. The lack of exposure to telecom company Advanced Info Services detracted from performance as its shares gained. The position in Bank Mandiri Persero and the underweight holding in Singapore Tech Engineering also detracted from relative returns. The position in Bloomberg Resorts declined as its weak VIP gaming segment impacted the firm's financial performance. On a positive note, within consumer staples, Japfa Comfeed Indonesia contributed positively. The lack of exposures to government-owned fixed line and wireless telecommunications company Telkom Indonesia, oil and gas company PTT Exploration and Production, and cement company Siam Cement proved to be beneficial for the fund.

The manager deploys a clear and repeatable investment process that focuses on identifying opportunities as core compounders, future leaders and mispriced names to create a portfolio of 80–120 stocks. The manager's focus is on assessing companies' sustainability impact. She favours businesses that are enduring franchises having sustainable competitive advantages, a reasonable runway of future growth, attractive valuations with a good risk/reward profile, healthy balance sheets, and superior management ability.

FUND SIZE AS AT 30.04.2025 : USD 2,767 MILLION

Manager's Overview

Asia ex Japan equities advanced over the period. Chinese stocks initially struggled with continued property market weakness and subdued consumer confidence, but they rebounded strongly post the government's stimulus announcement in late September and due to the optimism from DeepSeek's new AI model. Taiwan's technology sector remained robust on AI-related chip demand, while Australian equities rose from solid earnings and steady commodity prices. Towards the end of the period, renewed US-China tariff concerns created significant price actions, but tensions eased slightly following news of potential trade negotiations.

The fund underperformed the comparative index over the period. Security selection in the information technology sector detracted from relative returns. The position in Samsung Electronics and the lack of exposure to Xiaomi held back gains. Selected holdings including Laobaixing Pharmacy Chain, Techtronic Industries and Hygeia Healthcare weighed on relative returns. Conversely, certain holdings in India's private lenders proved rewarding. Positions in HDFC Bank and ICICI Bank contributed to returns. Positions in Fortis Health care and Godrej Consumer Products also supported performance.

The fund is focused on engagement and a deeper integration of environmental, social and (corporate) governance (ESG) issues in the investment process to create a portfolio of high-quality growth companies that maintain high or improving sustainability characteristics. The portfolio had a 91.4% exposure to stocks with high ESG ratings, which are either rated A or B based on Fidelity's proprietary ESG rating or rated A and above by MSCI where FIL ratings are not available due to non-coverage. A total of 1.6% of the fund was invested in stocks with lower but improving ESG characteristics. These are companies rated C and below by FIL or BBB and below by MSCI, but where the fund's management team believes the company could demonstrate significant improvement via our engagement efforts.

FUND SIZE AS AT 30.04.2025 : USD 1,032 MILLION**Manager's Overview**

Regional equities advanced over the period. Chinese stocks initially struggled with continued property market weakness and subdued consumer confidence, but they rebounded strongly post the government's stimulus announcement in late September and due to the optimism from DeepSeek's new AI model. Hong Kong equities also advanced, while Taiwan's technology sector remained robust on AI-related chip demand. Towards the end of the period, renewed US-China tariff concerns created significant price actions, but tensions eased slightly following news of potential trade negotiations.

The fund underperformed the comparative index over the period. Security selection in the information technology sector detracted from relative returns. The position in Samsung Electronics and the lack of exposure to Xiaomi held back gains. Selected holdings including Laobaixing Pharmacy Chain, Techtronic Industries and Hygeia Healthcare weighed on relative returns. Conversely, certain holdings in India's private lenders proved to be rewarding, as positions in HDFC Bank and ICICI Bank contributed to returns. Positions in Fortis Health care and Godrej Consumer Products also supported performance.

The fund has an overweight exposure to financials, notably banks and insurance companies. Positions in ICICI Bank and HDFC Bank are retained. These banks continue to benefit from increasing banking penetration and market share gains from government-owned banks, given their strong franchises and technology leadership. The position in BDO, a bank in the Philippines, is maintained. The bank has the largest asset base in Philippines. Its loan growth is expected to remain healthy, despite a shallower rate cut outlook. The bank trades at an attractive valuation with an improving asset quality. The portfolio retains position in Thailand's largest private hospital operator, Bangkok Dusit Medical. It is expected to benefit from growth in medical tourism and deteriorating demographic situation in Thailand, which will lead to a higher need for hospital services.

FUND SIZE AS AT 30.04.2025 : USD 1,341 MILLION

Manager's Overview

Asia Pacific ex Japan equities advanced over the period. Chinese stocks initially struggled with continued property market weakness and subdued consumer confidence but they rebounded strongly post the government's stimulus announcement in late September 2024 and due to the optimism from DeepSeek's new AI model. Taiwan's technology sector remained robust on AI-related chip demand, while Australian equities rose on the back of solid earnings and steady commodity prices. Towards the end of the period, renewed US-China tariff concerns created significant price actions, but tensions eased slightly following news of potential trade negotiations.

The fund underperformed the comparative index over the period. Positions in companies that are sensitive to US interest rate cuts such as fibre cement producer James Hardie Industries and power equipment company Techtronic Industries detracted from returns. An underweight position in Tencent Holdings and the lack of exposure to Alibaba Group Holding also weighed on returns. Meanwhile, a risk-averse sentiment supported gold stocks. Positions in precious metals streaming company Wheaton Precious Metals and gold royalty company Franco-Nevada proved to be rewarding. The holding in India's private lender HDFC Bank gained.

The manager focuses on bottom-up stock selection and favours companies that have an understandable business model, an above-average earnings growth rate relative to market expectations and the ability to allocate capital effectively to increase returns on equity over time. The manager also likes companies that trade at attractive valuations. The allocation to private lender HDFC Bank was retained. It boasts a strong balance sheet and the best asset quality among Indian banks. The allocation to Singapore's global consumer internet company Sea was maintained. The company is focussed on growing and improving the inhouse logistics service, as well as enhancing customer experience by improving customer returns/refunds. Its fintech business is growing and profitable, given the synergies between digital banking and the e-commerce platform.

FUND SIZE AS AT 30.04.2025 : USD 1,134 MILLION

Manager's Overview

Small-cap equities in the Asia Pacific ex Japan region ended the month in negative territory. Chinese equities advanced, while Hong Kong equities fell. Indian equities also declined. Within technology focussed markets, South Korean and Taiwan markets lagged over the period. Within ASEAN, equities in the Philippines and Malaysia advanced, while Thailand and Indonesia detracted. Overall, we continue to focus on fundamental analysis and believe that investing in good businesses run by competent and honest management teams at attractive prices is the most time-tested way to have positive returns in the stock market. Our strong team of Asian equity research analysts (including five small-cap analysts) will continue to provide an edge versus the market when it comes to identifying attractive investment opportunities.

The fund outperformed the comparative index over the period. Within consumer staples, Japfa Comfeed contributed significantly to returns, while De Grey Mining in the materials sector also added value. Within industrials, the exposure to Genpact and Full Truck Alliance enhanced returns. Conversely, financials detracted from performance, with IndusInd Bank being a major detractor. Other detractors included Valaris, Indocement Tunggal and Yixingtang Pharmaceutical.

The fund is managed to provide absolute returns. Each security is owned for what it can contribute to returns and not due to its inclusion in an index. The portfolio manager believes that over time, the quality of business and valuations will matter. The long-term value of the business will be driven by the cash flow it generates. The manager looks for companies with strong competitive advantages and good management teams. The focus is on discovering undervalued stocks, which leads to a significant share of funds being invested in small and mid-cap companies. The manager holds a portfolio of businesses that have a dominant position in their respective industries, earn good returns on capital, and are available at attractive valuations. The fund continues to not purchase stocks that are in trend and where high valuations do not leave enough margin of safety, as well as businesses with high debt levels.

FUND SIZE AS AT 30.04.2025 : USD 1,738 MILLION

Manager's Overview

Asian equities advanced over the period. Solid performance of Chinese and Hong Kong equities and a weakening US dollar acted as tailwinds for regional markets. However, uncertainties surrounding the implementation of US tariffs affected major export-driven Asian markets. Markets in India and Taiwan ended higher, while South Korean and Indonesian equities declined. Singapore was a notable gainer as it ended 2024 on a strong footing with a substantial GDP growth rate.

The fund underperformed the index over the period. At a sector level, information technology and financials were the main detractors, while communication services and materials contributed positively. South Korea's diversified electronics major Samsung Electronics' shares fell sharply due to disappointing outcomes in its high-bandwidth memory (HBM) chip business. Encouragingly, towards the end of the period, Samsung Electronics partially recovered following news that its redesigned HBM product, HBM3E 12-Hi, is much better than expected and had been sent to Nvidia for testing. Elsewhere, not holding Chinese consumer electronics maker Xiaomi and holdings in Unimicron Technology and ASMPT weighed on relative returns. Losses in India's Axis Bank were offset by the gains in HDFC Bank and ICICI Bank. Separately, our long-standing conviction holdings in Chinese internet leaders Alibaba Group Holdings and Tencent Holdings contributed to performance. Shares in Taiwanese technology leader Media Tek gained as it reported strong earnings results, with growth across all its business segments.

The manager is focussed on identifying companies with quality management teams and strong franchises across the breadth of the Asian universe through a rigorous bottom-up stock picking approach. The fund has an overweight exposure to the financials, communication services and consumer discretionary sectors as of 30 April 2025. The fund continues to be domestic Asia-orientated, as 77% of the portfolio's revenues are generated within Asia. Indonesia and Hong Kong are the key overweight exposures, while the fund has a key underweight stance in Taiwan. Most of the fund's US revenue exposure is derived from technology giants such as Taiwan Semiconductor Manufacturing Company (TSMC) and Samsung Electronics.

FUND SIZE AS AT 30.04.2025 : AUD 508 MILLION

Manager's Overview

Australian equities advanced over the review period. The anticipation of US tariffs and their potential impact on Australia's export-driven sectors capped some gains during the first half of 2025. There was a big divergence between the returns of various sectors in Australian markets. The financials sector recorded solid gains during the year, as major banks and insurers delivered robust returns to shareholders. Utilities and communication services also enjoyed outsized returns, with their defensive characteristics coming into play under more volatile market conditions. Meanwhile, materials and energy sectors led the losses.

The fund underperformed the comparative index over the review period. At a stock level, Ramsay Health Care's share price fell as its management's tone shifted noticeably from margin normalisation to weaker earnings outlook in the near-term, driven by rising wages and energy costs. Elsewhere, Domino's Pizza Enterprises declined amid concerns over franchisee profitability and a slowdown in new store openings. Additionally, ongoing operational challenges and leadership changes contributed to investor uncertainty. Meanwhile, returns in the materials sector was largely affected by the widespread weakness in industrial metal prices over the review period, particularly iron ore, copper, lithium and metallurgical coal. This backdrop weighed on the portfolio's exposure to IGO. However, it proved to be beneficial for the portfolio's lack of exposure to mining company Fortescue. On a positive note, Evolution Mining was the top contributor. It advanced as it followed the strength in gold prices. Within financials, our position in Suncorp Group delivered strong returns during the period. Additionally, pricing in the Australian insurance industry remains strong and continues to be a tailwind for Suncorp, with sticky inflation showing signs of easing. Likewise, Pinnacle Investment Management also rose significantly driven by strong financial results and strategic acquisitions. The company reported a solid rise in its net profit and a strong growth in funds under management, driven by substantial net inflows.

The portfolio is invested in large-cap, highly liquid blue-chip stocks. The manager remains mindful of company fundamentals and focuses on the experience and competence of management teams. Australia remains home to innovative companies that are well positioned to deliver long-term growth. The manager favours high-quality companies with a sustainable competitive edge, strong free cash flow generation and robust earnings growth. At the same time, he keeps an underweight stance in companies that trade at high valuations and will lag their peers in the long run due to replicable business models. The fund has a high-conviction position in Suncorp Group, which focuses on business improvement initiatives. Its core insurance business has a market leading position in Australia and strong fundamentals, including encouraging premium growth and reduction of capital.

FUND SIZE AS AT 30.04.2025 : USD 3 MILLION

Manager's Overview

Chinese stocks advanced, on the back of the Chinese government's coherent stimulus measures aimed at revitalising its economy and improving fundamentals. The prospect of China's AI development following the release of local startup DeepSeek's cost-effective AI model, and its wide applications across various industries, significantly enhanced investor confidence in the technological capabilities of Chinese firms, and this led to a revaluation of Chinese assets.

The fund underperformed the comparative index over the period. The information technology and consumer discretionary sectors were the significant detractors, while stock selection in health care and utilities proved to be rewarding. The positions in New Oriental Education & Technology Group and CMOG Group led to losses. The lack of exposure to Cambricon Technologies also negatively impacted relative performance as its shares advanced. Conversely, the positions in Mao Geping Cosmetics, Tencent Holdings, and China Merchants Bank with resilient business models and growth prospects added value.

The managers focus on selecting quality companies with sustainable growth prospects that are contributing to a sustainable planet, lives, and enterprises. They integrate environmental, social and governance (ESG) factors into their investment decisions, actively exercising their role as owners as they aim to achieve long-term capital growth, while promoting sustainability characteristics and contributing to a sustainable future. The fund holds biopharmaceutical firm Innovent Biologics for its leadership in innovative drugs and a strong portfolio in other non-oncology drugs. Contemporary Amperex Technology, one of the largest manufacturers of lithium-ion batteries for electric vehicles globally, and China Merchants Bank, a leading retail-oriented bank in China, are the other key positions in the portfolio.

FUND SIZE AS AT 30.04.2025 : USD 2,963 MILLION

Manager's Overview

Chinese stocks advanced over the period, on the back of the Chinese government's coherent stimulus measures aimed at revitalising its economy and improving fundamentals. The prospect of China's AI development following the release of local startup DeepSeek's cost-effective AI model, and its wide applications across various industries, significantly enhanced investor confidence in the technological capabilities of Chinese firms, leading to a revaluation of Chinese assets.

The fund underperformed the comparative index over the period. Significant detractors included holdings in the consumer discretionary sector, where New Oriental Education, PDD Holdings and Shenzhou International negatively impacted returns. Additionally, information technology stocks detracted from returns, as underweight exposure to companies like Xiaomi further weighed on performance. On the positive side, not holding energy stocks added relative value. Pop Mart International, Mao Geping Cosmetics and Ping An Insurance enhanced returns.

The imposition of US tariffs had significant repercussions on Asian equity markets, however, the strategy's direct exposure to the US is very low and it is focused on China's domestic consumption theme. It is therefore in a relatively safer position given most of the companies held in the portfolio generate large portions of the revenue from within China. On China's broad-based stimulus package so far, it has addressed some overall investor concerns. However, we believe an improvement in macroeconomic fundamentals is still required for a durable market recovery, and that may require further fiscal policy support, alongside effective implementation. Stimulus measures have included the property sector, which recently has shown signs of stabilisation. There remains significant variation in consumption across regions and industries, which shows the growing gap between the winners and losers among companies, and it underscores the importance of active management in navigating this challenging environment.

FUND SIZE AS AT 30.04.2025 : USD 2,233 MILLION

Manager's Overview

Chinese stocks advanced over the period, buoyed by the Chinese government's coherent stimulus measures aimed at revitalising its economy and improving fundamentals. The prospect of China's AI development following the release of local startup DeepSeek's cost-effective AI model, and its wide applications across various industries, significantly enhanced investor confidence. It led to a revaluation of Chinese assets.

The fund underperformed the comparative index over the period. Notably, information technology and energy sectors were the significant detractors. The lack of exposure to Xiaomi impacted returns as its shares advanced. Conversely, communication services and materials sectors contributed positively, with Baidu and Bytedance registering favourable results. In terms of stock performance, the underweight stance in PDD Holdings and Meituan contributed to returns.

The portfolio manager continues to focus on bottom-up stock selection with a value-focussed approach. He prefers good businesses that are available at attractive valuations with enough margin of safety and run by competent and honest management teams that manage to earn favourable return on capital. The fund is a diversified portfolio of 60-80 stocks, where we are currently finding opportunities in businesses that have domestic demand drivers. As of 30 April 2025, the fund retains its largest overweight stance in capital goods businesses among industrials, consumer durables, and retail pharmacies, where many businesses are trading at discounted valuations and maintain strong balance sheets. The fund also has an overweight stance in real estate, and maintains notable underweight stances in information technology and financials.

FUND SIZE AS AT 30.04.2025 : USD 133 MILLION

Manager's Overview

Chinese stocks advanced over the period, on the back of the Chinese government's coherent stimulus measures aimed at revitalising its economy and improving fundamentals. The prospect of China's AI development following the release of local startup DeepSeek's cost-effective AI model, and its wide applications across various industries, significantly enhanced investor confidence in the technological capabilities of Chinese firms, and this led to a revaluation of Chinese assets.

The fund underperformed the comparative index over the period, mainly due to unfavourable positions in consumer discretionary and financials sectors. Holdings in New Oriental Education & Technology Group, Hygeia Healthcare Holdings, and PDD Holdings negatively impacted returns. Conversely, consumer staples contributed positively, aided by the position in Shanghai Chicmax Cosmetic, while the lack of exposure to Kweichow Moutai aided. Additionally, the position in TSMC was beneficial.

The manager takes a thematic approach to fundamental, bottom-up investment, and looks for innovative firms focused on growth and quality at a reasonable price. Seeking to capitalise on the accelerated innovation in China, they apply a deep understanding of the technological, lifestyle and environmental innovations that are reshaping the world to identify underappreciated growth opportunities. Environmental, social and governance (ESG) considerations are integrated in the investment process. As a result, the fund has an overweight stance in the consumer discretionary and industrials sectors. Within consumer discretionary, Trip.com Group is preferred for its dominant position in the online travel agency market in China and due to the potential in its overseas businesses. Within industrials, Contemporary Amperex Technology is one of the largest manufacturers of lithium-ion batteries for electric vehicles globally. Its margin remains sustainable due to high prices, backed by its better customer mix, product quality, continual innovation, and lower costs benefitting from a large procurement scale.

FUND SIZE AS AT 30.04.2025 : USD 25 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors were the strongest performers, while the energy sector was the main laggard. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Weak stock selection in the information technology sector and the underweight position in the financial sector held back gains. Meanwhile, selected holdings in the industrials sector notably supported returns. At a stock level, NXP Semiconductors and CSX Corp were the main detractors. However, Siemens Energy and SWCC Corp added value.

The portfolio manager has identified four core categories for investments in sustainable enterprises – carbon reduction, clean power, green fuels, and green mobility. The manager seeks investments in companies providing products and services that facilitate and contribute to the process of decarbonisation through solutions that are economically competitive, have a demonstrated impact on Scope 4 (avoided) emissions, and have revenues aligned to UN sustainable development goals, targets, and indicators. As a result of bottom-up stock selection within these themes, the fund has a structurally overweight position in the industrials, IT and utilities sectors. Industrials, known for their cyclical nature, and utilities, typically more defensive, create a natural hedge against each other due to their generally inverse performance correlation.

FUND SIZE AS AT 30.04.2025 : USD 409 MILLION

Manager's Overview

Equities in emerging Asia advanced over the period. Solid performance of Chinese and Hong Kong equities and a weakening US dollar acted as tailwinds for regional markets. However, uncertainties surrounding the implementation of US tariffs affected major export-driven Asian markets. Markets in India and Taiwan ended higher, while South Korean and Indonesian equities declined.

The fund's underperformance was primarily driven by security selection in China. Despite revenue coming in above expectations in its latest financial results, the oncology hospital chain Hygeia Healthcare detracted as its earnings fell slightly short of market expectations. Hygeia Healthcare is favoured for its high-quality private hospital chain and is one of the leading oncology health care service providers in China. E-commerce retailer PDD Holdings fell sharply due to the disappointing guidance issued by its management. South Korea's diversified electronics major Samsung Electronics' shares fell sharply due to disappointing outcomes in its high-bandwidth memory (HBM) chip business. Encouragingly, towards the end of the period Samsung Electronics partially recovered following news that its redesigned HBM product, HBM3E 12-Hi, is much better than expected and had been sent to Nvidia for testing. Not holding consumer electronics maker Xiaomi also weighed on relative returns. Encouragingly, our exposure to Mao Geping Cosmetics enhanced returns. It was well received in its public listing and reported satisfactory 2024 results. Mao Geping is a unique Chinese makeup brand targeting the domestic premium market, boasting a strong offline presence and effective brand communication. Separately, our long-standing conviction holdings in Chinese internet leaders ByteDance and Tencent Holdings contributed to performance.

The manager deploys a clear and repeatable investment process that focuses on identifying opportunities in terms of core compounders, future leaders and mispriced names to create a portfolio of 80–120 stocks. The manager's focus is on assessing companies' sustainability impact. She favours businesses that are enduring franchises, having sustainable competitive advantages, a reasonable runway of future growth, attractive valuations with a good risk/reward profile, healthy balance sheets, and superior management ability.

FUND SIZE AS AT 30.04.2025 : USD 256 MILLION

Manager's Overview

Equities in the emerging Europe, Middle East and Africa (EMEA) region posted positive returns during the reporting period. Stimulus measures announced by China towards the end of September 2024, strong performance of technology stocks, easing of monetary cycle by the US Fed, and weakening of the US dollar supported the market sentiment. However, the outcome of the US election and the rhetoric around tariffs added to volatility towards the end of 2024. This was, however, offset by hopes around a Russia-Ukraine ceasefire and improving prospects for Europe in the beginning of 2025. Recently, the announcement of reciprocal trade tariffs by the US on 2 April shaped the market, although a 90-day pause on tariffs was announced for most countries, except China. Prices of precious metals rose strongly, while oil prices declined. In this environment, all countries except Turkey and Saudi Arabia ended in positive territory.

The fund outperformed the comparative index over the period. At the sector level, robust stock picking in financials and energy added value. Within financials, Greece's Piraeus Financial and Optima Bank, Bank of Cyprus, and UK-listed Georgian Bank TBC enhanced gains. Conversely, Kazakhstan's Kaspi and Saudi Arabia's Derayah Financial detracted the most. Poland's Auto Partner was also a source of weakness. Holdings in industrials also held back gains, particularly Hungarian low-cost carrier Wizz Air.

The managers follow a bottom-up stock picking approach, because of which the fund's country and sector positioning reflects a number of available attractive investment opportunities. Financials is the largest absolute position, and we have an overweight stance in financials compared to the index. Key holdings are Al Rajhi Banking and Investment and The Saudi National Bank. The managers also like the prospects of Polish banks like Powszechna Kasa Oszcz and Bank Polska Kasa Opieki, and Greek banks like Piraeus Financial, and Optima Bank. They are cautiously positioned in commodities (iron ore, tin, copper, gold names). The fund has exposure to First Quantum Minerals, Kumba Iron Ore, AngloGold Ashanti and Alphamin Resources.

FUND SIZE AS AT 30.04.2025 : USD 1,107 MILLION

Manager's Overview

Emerging markets (EMs) posted positive returns during the period. The period was marked by volatility as markets globally grappled with shifting expectation on monetary policy, a busy election period (in both the US and EMs), and stimulus announcements in China in 2024. The year 2025 brought some relief rally in China and some Latin American economies. There was some pull back in performance towards the end of the period after the US imposed sweeping reciprocal tariffs on 2 April 2025, although markets experienced some relief after a 90-day pause was announced for most countries, barring China.

The fund posted positive returns but underperformed the comparative index over the year. At the sector level, security selection in consumer discretionary detracted the most from returns, although this was partially offset by the fund's overweight positioning in the consumer discretionary sector. Security selection in financials was also weak. The fund's underweight stance in Alibaba held back gains, along with positions in Li Ning, Laobaixing Pharmacy and Samsonite Group. Encouragingly, the positions in Naspers, Meituan and China Mengniu dairy were among the top contributors to returns.

During the period, the manager continued to look for high returns, well-capitalised businesses with under-levered balance sheets, meaning that the companies where the fund has allocations should have a better risk-reward profile. Within information technology, TSMC is the fund's largest absolute holding, as the company continues to be a front-runner in the domain with cutting edge technology. We also like MediaTek for its expansion into application-specific integrated circuit (ASIC) business segment as it allows MediaTek to develop unique integrated circuits tailored to specific customer needs, enhancing product differentiation and potentially increasing revenue.

FUND SIZE AS AT 30.04.2025 : USD 8 MILLION

Manager's Overview

Emerging markets ex China equities advanced during the period despite market volatility. Markets globally grappled with shifting expectations on monetary policy, a busy election calendar (in both the US and EMs) in 2024. The beginning of 2025 brought some relief with a rally in few Latin American (LatAm) economies. However, there was some pull back in the strong performance towards the end of the period after the US imposed reciprocal tariffs on 2 April, although this was followed by a relief rally after a 90-day pause was announced on these tariffs for most countries. Asian markets such as India and Taiwan posted positive returns, along with CEE markets including the Czech Republic, Hungary and Greece. Conversely, Turkey, Indonesia and South Korea posted negative returns, along with LatAm's biggest economies - Brazil and Mexico.

The fund posted positive returns but underperformed the comparative index over the year. At the sector level, security selection in the IT, industrials and consumer staples sectors weighed on performance. Positions in IT names like Samsung Electronics and ASML, and an underweight exposure to TSMC, detracted from returns. Transportation business Armac Locaco and consumer store operator Wal Mart De Mexico also held back gains. Encouragingly, stock picking in materials and the fund's overweight positioning in financials supported performance. In this aspect, gold mining companies Lundin Gold and Franco Nevada, and banks TBC bank and Nu Holdings, added value.

The portfolio managers look for high-quality companies that are capable of delivering consistent returns and are valued at a reasonable price. These tend to be companies that exhibit strong management quality and solid corporate governance practices. The portfolio's largest overweight exposure at the sector level is to financials. Key holdings include India's largest private sector bank HDFC Bank, and a diversified set of names across a range of markets, including Mexico's Regional Bank, Poland's PKO Bank, Brazilian banks Nu Holdings and Inter & Co, Hungary's OTP Bank and Indonesia's Bank Mandiri.

FUND SIZE AS AT 30.04.2025 : USD 2,989 MILLION

Manager's Overview

Emerging markets (EMs) posted positive returns during the period. The period was marked by volatility in 2024 as markets globally grappled with shifting expectation on monetary policy, a busy election calendar (in both the US and EMs), and stimulus announcements in China. Meanwhile, the beginning of 2025 brought some relief with a rally in China and some Latin American economies. There was some pull back in the strong performance towards the end of the period after the US imposed tariffs on 2 April, although markets recovered to some extent after a 90-day pause was announced on tariffs for most countries, barring China.

The fund underperformed the comparative index over the period. Both stock picking in China and Hong Kong and the aggregate underweight exposure to China detracted over the period. Stock picking in Kazakhstan (through the position in e-commerce platform Kaspi) and the overweight exposure to Brazil dragged on returns. Stock selection in India and South Africa was additive (the latter largely driven by Naspers). At the stock level, the underweight exposure to Alibaba and the lack of exposure to consumer electronics/auto business Xiaomi were among the largest detractors as these stocks performed well as they were the perceived beneficiaries of AI-led demand. While the underweight exposure to Tencent detracted, this was more than offset by the position in Naspers, which holds a large stake in Tencent. Another strong performer was India's online travel agent MakeMyTrip, which has a significant growth runway given the penetration of online travel.

The fund's country and sector positioning are a residual of the managers' bottom-up stock picking approach; however, the prevailing environment is a consideration. The managers continue to focus on owning well-capitalised businesses with under-levered balance sheets. The fund is conservatively positioned, meaning that the companies owned should be better prepared for what will remain a challenging environment.

FUND SIZE AS AT 30.04.2025 : EUR 613 MILLION

Manager's Overview

European equity markets delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators, and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

As a "passive" or "index tracker" fund, the fund is managed to provide returns that are as close as possible to that of the index, which is a concentrated index of the 50 largest companies in the eurozone. However, the fund incurs costs and expenses that the index does not incur, although it can benefit from securities lending when the index cannot. This means fund returns should be similar to the index, rather than identical. Over the period, the primary A-EUR class of the fund returned 7.5% in net euro terms, outperforming the index, which returned 7.3%. Taxation was a positive source of tracking difference, where the fund's withholding tax treatment is more favourable versus the net total return index. Over the period, the same class ex-post tracking error averaged 0.41% (a 3-year annualised figure, based on 36 month-end data points, is used as it is regarded as more statistically valid). This measure of the variability of fund returns around the index can be influenced by a number of factors, including the aforementioned withholding tax differences, and the fund's partial swing pricing policy, which is designed to manage tracking difference as tightly as possible over time.

Geode Capital Management LLC, a leading specialist in the management of index tracking strategies, was appointed as the sub-investment manager to the fund on 3 January 2017. The managers aim to minimise deviation from the index by using an index tracking technique, which comprises full replication of the companies represented in the index. Please note, the fund's cash position, and investment of cash into a liquidity fund for diversification, does not mean that the fund is under exposed to the index, as such positions are typically equitised with equity index futures contracts. This helps to efficiently manage cashflows in the fund at reduced costs. When taking into account the exposure achieved by these futures contracts, the fund's holdings weights more closely match the index.

FUND SIZE AS AT 30.04.2025 : EUR 182 MILLION

Manager's Overview

European equity markets delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators, and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's AI model. Nonetheless, robust earnings, relatively low exposure to the tech sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund underperformed the comparative index over the period. The underperformance was primarily driven by stock picking and unfavourable positioning in financials. Stock picking in the healthcare sector also detracted from relative returns. However, some of these losses were partially offset by favourable positioning across energy and consumer discretionary sectors, while stock picking in the consumer staples sector also added notable value. At a stock level, the fund's exposure to ASML and Novo Nordisk were the top two detractors from returns, while the fund's exposure to Schneider Electric also pared gains. Conversely, the fund's exposure to Siemens Energy was the top contributor, while its holding in Deutsche Börse was another source of strength.

The fund leverages Fidelity's differentiated research capabilities and analyst top ideas to construct a concentrated portfolio that promotes sustainable characteristics, with high stock-specific risk. The investment analysis integrates a wide range of environmental and social characteristics. Sector positioning is broadly neutral, with overweights and underweights within a +/-5% range.

FUND SIZE AS AT 30.04.2025 : EUR 2,002 MILLION

Manager's Overview

European equities delivered negative returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict presented headwinds, but these were largely offset by moderating inflation, improving economic indicators, and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund delivered negative returns and underperformed the index. The fund's underweight positions in financials, particularly the large underweight stance in banks, mainly dragged on performance. Within the sector, exposure to payments businesses, including Edenred, also held back gains. IT and health care sectors delivered mixed results. Although stock picking was sub-par, the overweight positioning in these sectors added value. Among the top detractors were health care names Icon Plc, Tecan and Merck KGAA. However, the underweight positioning in Novo Nordisk added relative value. The holding in Novo Nordisk was sold in January on valuation grounds. Within IT, the overweight exposure to the software sub-sector was advantageous, with SAP emerging as the primary contributor to returns. The fund's underweight positioning in semiconductor business ASML also added relative value.

The portfolio manager runs the portfolio with a bottom-up approach, focusing on finding great businesses that are trading below their intrinsic value. Predictions on the macro environment are not a significant input into the process, except that it can influence sentiment and thereby valuation of companies where the fund has holdings or is looking to own.

FUND SIZE AS AT 30.04.2025 : EUR 7,289 MILLION

Manager's Overview

European equity markets delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election in the US, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's cost-effective AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund significantly outperformed the comparative index over the period. Stock picking in the healthcare and consumer staples sectors, coupled with favourable positioning in the healthcare, information technology, consumer discretionary and financials sectors added value. However, the lack of exposure to aerospace and defence sub sectors within the industrial sector offset some of these gains. At a sector level, the lack of exposure to Novo Nordisk and ASML were the top two contributors to returns, while the fund's exposure to Ericsson added notable value. Conversely, the fund's exposure to Bunzl was the top detractor, while its holding in SCOR was another source of weakness.

The portfolio manager's long-term investment approach focuses on companies with quality characteristics such as attractive or improving returns on capital, strong competitive positions, high free cash flow conversion, and strong management teams that are owner-orientated and mindful of the importance of capital allocation.

FUND SIZE AS AT 30.04.2025 : EUR 1,105 MILLION

Manager's Overview

European smaller equities, along with their European peers, delivered negative returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict presented headwinds, but these were largely offset by moderating inflation, improving economic indicators and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June, the first cut since 2019, and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund delivered negative returns and underperformed the index. The fund's underperformance was the outcome of a weak security selection and disappointing positioning across most sectors. Among the top detractors were GN Store Nordic (consumer discretionary), Stabilus (industrials), and Team Internet Group and 4imprint (communication services). On a positive note, the fund's overweight position in financials offset some of these losses. Key contributors to relative returns were financials names VZ Holding, Grupo Catalana Occidente, Banca Generali, and Alpha Group.

The portfolio managers are focused on identifying well-managed, cash generative companies that have clear market leadership, a sustainable competitive advantage, and profits driven by strong sales growth. Given the focus on bottom-up stock picking, sector allocation is primarily an outcome of where they find the most interesting opportunities.

FUND SIZE AS AT 30.04.2025 : EUR 105 MILLION**Manager's Overview**

European smaller equities, along with their European peers, delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict presented headwinds, but these were largely offset by moderating inflation, improving economic indicators, and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund delivered positive returns but underperformed the index. The fund's underperformance was the outcome of a weak security selection in industrials and information technology, and an overweight stance in the consumer discretionary sector. Among the top detractors were GN Store Nordic (consumer discretionary), Stabilus (industrials), and Team Internet Group and 4imprint (communication services). On a positive note, security selection in consumer staples and the overweight position in financials was the main driver of relative performance. Key contributors to relative returns were Ascential and Tele2 (communication services), VZ Holding (financials), and Alpha Financial Markets (industrials).

The portfolio managers are focused on identifying well-managed, cash generative companies that have clear market leadership, a sustainable competitive advantage, and profits driven by strong sales growth. ESG considerations are integrated throughout the investment process. Given the focus on bottom-up stock picking, sector allocation is primarily an outcome of where they find the most interesting opportunities.

FUND SIZE AS AT 30.04.2025 : USD 405 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced and then paused sweeping tariffs. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan. Meanwhile, returns in US dollar terms were supported due to the currency's depreciation against the euro, the yen and sterling.

The fund underperformed the index over the period. Selected holdings in IT (mainly technology hardware), industrials and consumer discretionary detracted from returns, while stock picking in selected healthcare stocks and materials, alongside an overweight exposure to utilities, supported relative performance. The position in electronics company Samsung Electronics fell amid declining profits, labour disputes, and a lag in AI adoption across its suite of services. The lack of exposure to consumer electronics company Apple detracted from relative performance as its shares gained on the back of positive iPhone shipment data and confidence in Apple's AI strategy for its consumer devices. The underweight exposure to semiconductor company Broadcom held back gains as its shares rose strongly. The position in managed care company Elevance Health declined sharply after the company missed third-quarter earnings estimates. On a positive note, the off-benchmark position in biotechnology company Inmed advanced significantly due to investor optimism following the successful completion of the Phase III clinical trial of its drug Brensocatib. The fund's exposure to medical devices company Boston Scientific advanced driven by market expansion and innovation. The holding in energy and services company Centrica advanced.

The managers continue to focus on the highest conviction and most relevant ideas generated by Fidelity's global analyst base. By reducing unintended risks, they ensure that stock selection is the key driver of risks and returns. Portfolio positioning is therefore a result of our bottom-up stock selection process. Boston Scientific, a diversified medical devices company with a focus on minimally invasive procedures, is a key position in the fund. The company's strong product pipeline is expected to drive further top line growth and margin expansion. Another key position in the portfolio is Morgan Stanley. The bank saw a strong quarter of performance and is well positioned for long term growth. The managers bought a couple of new positions including a fast-growing UK utilities company and a global leading airbags and seatbelts supplier.

FUND SIZE AS AT 30.04.2025 : USD 202 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Stock picking in IT was the primary detractor from returns, with notable underperformance seen from stocks such as Qorvo and NXP Semiconductors. Meanwhile, consumer discretionary names contributed positively, with Prosus NV and Alibaba Group Holding Ltd aiding the returns. Stock selection in consumer discretionary and the underweight stance in health care sectors proved to be rewarding. Terence Tsai and Matt Egerton took over portfolio management responsibilities on the strategy from 1 January 2025.

The fund invests in the enablers, networks, and innovators, primarily in the communication services and IT sectors, which are driving advances in 'Future Connectivity'. The fund aims to invest in companies with better growth potential than the broad theme. The manager bought a position in graphics processing unit (GPU) manufacturer Nvidia. The company is demonstrating strong demand for its Blackwell GPUs, and Nvidia has a roadmap extending into 2026 and beyond.

FUND SIZE AS AT 30.04.2025 : EUR 902 MILLION

Manager's Overview

German equity markets delivered strong positive returns over the 12-month period. Political uncertainty in the country and US President Trump's election presented headwinds, but these factors were largely offset by moderating inflation, improving economic indicators, and the election victory of conservative Christian Democratic Union leader Friedrich Merz in February. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund outperformed the comparative index over the period, aided by avoiding exposures to large underperformers in the healthcare and consumer discretionary sectors. A sizeable underweight position in automobile manufacturers, which were sold off following the tariff announcement, proved to be particularly beneficial, as the fund held little exposure to Mercedes-Benz, BMW and Volkswagen over the period. Utilities group E.ON was another key contributor after the German government lifted its constitutional 'debt brake' and pledged €500 billion in infrastructure spending over the next decade, creating meaningful growth prospects for energy providers. Conversely, the manager's reluctance to own defence names hindered performance, as Rheinmetall rallied strongly after Trump urged Europe to raise defence spending while he pledged cuts to the US military budget. We initiated a position in the stock in late February and further increased our exposure in March.

Following the election of Friedrich Merz and the CDU/CSU party, we have seen the new government act with urgency. German parliament has approved incoming Chancellor Merz's plans to reform the country's constitutional 'debt brake', thereby removing constraints on defence spending and paving the way for the creation of a €500bn infrastructure investment fund. Meanwhile, an escalating global trade war, or even the continuing uncertainty around tariffs, could easily lead to a more challenging economic scenario over the next couple of quarters. In this backdrop, the portfolio managers' overall investment approach has not changed and they continue using detailed bottom-up industry and stock-specific analysis to invest in high-quality companies and avoid detractors.

FUND SIZE AS AT 30.04.2025 : USD 952 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Consumer discretionary and consumer staples sectors were the significant detractors from performance, with holdings in companies such as LVMH Moët Hennessy and Coty Inc contributing negatively. Conversely, the lack of exposure to energy and material sectors supported returns. Exposure to healthcare offered positive value with names like EssilorLuxottica advancing during the period.

The portfolio manager looks to invest in businesses exhibiting a strong brand with a demonstrated consumer moat, which is reflected in superior pricing power, innovation, and valuable intellectual property. The investment universe includes, but is not limited to, consumer sectors. Importance is placed on the quality of the management team and their track record, as the portfolio manager believes a clear vision on brand and coherent execution are essential for a competitive edge in a globalised world. Sustainable investing is core to the fund's quality-focussed and fundamentals-driven investment process. The impact of the COVID-19 pandemic led to a shift in the consumers' daily activities on online platforms (e-commerce, digital entertainment, and education), increased awareness about health and fitness, enhanced focus on sustainability, and the acceleration of the premiumisation trend. The fund is well-positioned to capitalise on these trends and provide investors with exposure to the breadth of the consumer brands universe.

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Detractors were primarily from the information technology and health care sectors, with notable underperformance from stocks like ASML Holding and Thermo Fisher Scientific. Meanwhile, the lack of exposure to the energy sector and selected holdings in the materials sector contributed to gains. At the stock level, Boston Scientific and EssilorLuxottica contributed to returns. The lack of exposure to Merck & Co, Advanced Micro Devices, Samsung Electronics, and Exxon Mobil also contributed, as these stocks saw declines over the period. Selected US holdings detracted from performance due to weak security selection.

The fund's sector allocation aligns with three thematic drivers: resource efficiency, ageing populations, and evolving consumption. Rising dependency ratios and a peaking global population create the need for enhanced resource efficiency and automation so that there are productivity gains. The global population is ageing, leading to growing demand for products and services within the healthcare space and the silver economy. Consumption trends are evolving as an emerging middle class drives demand for consumer goods and financial services, while e-commerce penetration continues to rise and benefits digital players. Examples of key positions include Boston Scientific, Amazon and software major Microsoft.

FUND SIZE AS AT 30.04.2025 : EUR 1,438 MILLION

Manager's Overview

The global financials sector advanced in line with global equities during the 12-month period. Easing monetary policy advanced across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Weak stock selection in banks held back gains. However, selected holdings in capital markets supported returns on the back of advances in global markets. Insurance sector was supported by favourable operating performance, strong capital positions, and positive earnings revisions. At a stock level, certain holdings, notably BNP Paribas and Visa Inc., weighed on overall performance. However, stocks like Interactive Brokers Group and Allianz SE contributed positively to returns, helping to offset some of the losses.

The fund has an overweight position in "multi-sector holdings", including Berkshire Hathaway and Investor AB. Their large equity portfolios give Stock Market Beta and help them perform well in a "risk-on" market, while their strong balance sheets help them remain relatively resilient during market drawdowns. The fund has a positive view on "investment banking & brokerage" (e.g., Interactive Brokers Group) & "asset management & custody banks" (e.g., Ares Management). These businesses have demonstrated strong ability to deliver organic growth over time and benefit from strong public equity markets. Within insurance, the fund has overweight exposure to reinsurance and neutral insurance (Multi Line, Life, and Property & Casualty) sub-sectors. Elsewhere, within banking, the fund has underweight holdings in ex-US "diversified banks". It is also underweight in ex-US banks due to concerns around falling net interest income and/or net interest margins (NIMs), and/or worsening credit.

FUND SIZE AS AT 30.04.2025 : USD 755 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices.

The fund underperformed the comparative index over the period. The biggest stock-specific detractors were in the semiconductor space. The position in chipmaker STMicroelectronics saw weak trading after it lowered guidance twice, projecting a recovery later than anticipated due to weak industrial demand. Memory chipmakers Samsung Electronics and Micron Technology also detracted from performance after a strong share price run in the first half of 2024. Meanwhile, our underweight exposure to technology heavyweight Nvidia proved to be unrewarding. While we anticipated a pause to consolidate the 240% share price gain from 2023, this did not materialise, particularly in the first half of the period. Conversely, a combination of stock selection and our overweight positioning in financials proved to be rewarding as financial stocks benefitted from optimism surrounding potential regulatory easing under the new US administration. As such, Arthur J. Gallagher and Berkshire Hathaway were among the key contributors to relative performance.

The strategy benefits from a diverse investment universe across sectors and geographies, including fast-growing emerging markets. This diversity adds resilience in volatile conditions, with areas like healthcare and communication services offering defensive potential. We also see the ongoing volatility as an opportunity to capitalise on share price dislocations, particularly in areas where stocks have moved with high correlations.

FUND SIZE AS AT 30.04.2025 : EUR 1,308 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard. Most of the key regions weighed on returns. On a positive note, Boston Scientific and Merck supported returns.

The fund underperformed the comparative index during the period. At an industry level, stock selection in the life sciences tools & services and biotechnology industries held back gains. Nonetheless, security selection in the healthcare equipment and healthcare supplies industries drove performance. At a stock level, holdings in Icon and Bruker weighed on returns. On a positive note, Boston Scientific and Merck supported returns.

The fund invests in high-quality companies that are set to benefit from long-term structural growth drivers within the health care sector, such as an ageing population and increased health care needs. Health care companies tend to be defensive, as demand for drugs and medical procedures will not change even in times of volatility and uncertainty.

FUND SIZE AS AT 30.04.2025 : EUR 665 MILLION

Manager's Overview

Global cyclical sectors declined over the review period. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Against this global backdrop, equities in the US and Japan gained the most. The S&P Global US Manufacturing Purchasing Managers' Index (PMI) saw a reading of 50.2 for April 2025, which was unchanged from March but below the preliminary estimate of 50.7.

The fund underperformed the comparative index over the period. Security selection in machinery & ground transportation sectors detracted from relative returns, while the metals & mining and electricals equipment sectors added relative value. Tool company Stanley Black & Decker and courier service FedEx declined on soft consumer demand and persistent cost pressures, leading to earnings falling short of market expectations. On a positive note, Siemens Energy and Lundin Gold benefitted from robust operating performance and record gold production, respectively.

Through its bottom-up approach, the fund continues to provide exposure to key long-term mega themes in automation, reshoring, decarbonisation & electrification, clean energy, digitisation, the reopening of the economy and global middle-class travel. Industries poised to benefit from reshoring include US domestic transport companies (freight rails, less than truckload carriers, brokers); project design and consulting companies; and construction materials companies. Electrification investment is accelerating due to decarbonisation, growing electric vehicle adoption, AI-led energy demand and growth in data centres. Growing unmet demand for air travel and more push towards defence spending also benefit aerospace & defence companies.

FUND SIZE AS AT 30.04.2025 : USD 5 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the year. The underweight stance in the communication services and information technology sectors contributed to relative returns during the period. The overweight stance in the consumer staples sector and stock selection in financials detracted from returns. At a stock level, the position in CaixaBank contributed to performance. Shares in CaixaBank rose following fourth-quarter earnings release that topped consensus estimates. The holding in biotechnology group argenx rose after the company released third-quarter revenue and earnings that exceeded consensus projections, boosted by sales of Vyvgart that is used to treat generalized myasthenia gravis and chronic inflammatory demyelinating polyneuropathy in the US. The underweight stance in consumer technology major Apple detracted from performance.

The global low volatility strategy is a defensive equity strategy that is managed to exhibit lower volatility than the broader market. The portfolio continues to have a bias towards lower volatility stocks and maintains a fairly defensive posture. The portfolio continues to maintain a high exposure to fundamentally buy-rated stocks while seeking to minimize absolute risk with an expectation of achieving 60%–80% of the volatility of the MSCI World Index over the long term.

FUND SIZE AS AT 30.04.2025 : EUR 21,274 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund recorded positive returns but underperformed the comparative index over the year. Stock selection in the semiconductors & semiconductor equipment and technology hardware, storage & peripherals segments detracted from returns. Stock selection in the communications equipment and broadband retail sectors added value. The lack of exposure to semiconductor design firm Nvidia made the biggest contribution to relative returns during the period. Not holding another semiconductor major Broadcom also added to relative performance as investors continued to exit the broader technology sector amid tariff concerns. The holding in Swedish telecommunications equipment major Ericsson (LM) Tele climbed after its first-quarter earnings beat analysts' expectations as mobile operators ramped up spending on the company's 5G equipment. The position in Chinese e-commerce major Alibaba contributed to performance. The company reported quarterly results that beat estimates on the back of growth in its cloud business, which includes its AI initiatives.

Elevated trade tensions between the US and the rest of the world have triggered broad market volatility and sell-offs. The technology sector, given its reliance on global supply chains and sensitivity to business and consumer confidences, has not been immune to this volatility and faced notable selling pressure. Under the current market backdrop, striking the right balance between risk and reward is essential, as being too defensive may add to potential risk in the portfolio. Hence, it is important to diversify, and the availability of a global opportunity set offers the portfolio manager the flexibility to position the portfolio in a way that strikes a balance between defensive and offensive elements. The manager continues avoiding companies that lack robust balance sheets or pricing power, meanwhile, targeting valuation dislocations in fundamentally strong companies and selectively adding to opportunities in industries at cyclical troughs, which are poised for a rebound. The portfolio is designed to minimise the risk of permanent capital loss by avoiding companies with weak balance sheets or limited pricing power.

FUND SIZE AS AT 30.04.2025 : USD 1,558 MILLION

Manager's Overview

Global equities gained over the review period. Moderating inflation, easing monetary policies, resilient global growth and stimulus measures in China supported equities in the first half of the period, although an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's caution on rate cuts in 2025 and trade policy uncertainty. Volatility exacerbated in April 2025 as the US announced and then paused sweeping trade tariffs. Against this global backdrop, most of the key regions ended higher, led by the UK, Europe ex UK, and Pacific ex Japan. At a sector level, financials, utilities, and communication services gained strongly, while the energy sector tracked crude oil prices lower.

The fund underperformed the comparative index over the year. The global demographics and global consumer brands strategies weighed on performance due to unfavourable security selections. The global health care strategy detracted from returns as the health care sector lagged broader global equity markets. Meanwhile, the global financial services strategy supported performance as the financial sector performed strongly.

The portfolio aims to achieve long-term capital growth and invests in equities that may benefit from structural or secular changes in economic and social factors. These can include themes such as disruptive technologies, demographic shifts, and climate change. Over the year, the exposure to the global consumer brands strategy was reduced. Instead, new consumer positions focused on luxury, staples and discretionary segments were added to provide more flexibility in allocations to these subsectors. The Water & Waste strategy was sold due to a weak outlook amid near-term policy risks. Meanwhile, the global financial services strategy was introduced due to an improved outlook for loans growth. A new defence strategy was also added, reflecting potential for increased defence spending in Europe.

FUND SIZE AS AT 30.04.2025 : USD 653 MILLION

Manager's Overview

Chinese and Hong Kong stocks advanced, given the Chinese government's coherent stimulus measures aimed at revitalising its economy and improving fundamentals. The prospect of China's AI development following the release of local startup DeepSeek's cost-effective AI model, and its wide applications across various industries, significantly enhanced investor confidence in the technological capabilities of Chinese firms, and this led to a revaluation of Chinese assets. Taiwanese equities also performed strongly, driven by a rally in technology firms amid a positive outlook for AI-related demand.

The fund underperformed the comparative index over the period, mainly due to unfavourable positions in the IT and consumer discretionary sectors. The IT sector detracted significantly, with an underweight position in Xiaomi and the exposure to Wiwynn impacting performance negatively. Similarly, the consumer-related companies New Oriental Education & Technology Group and PDD Holdings faced challenges. On the positive side, stock selection within communication services contributed to the gains, with strong performances from ByteDance and Tencent Holdings, while the returns were positively compounded by not holding Baidu. The strategic position in Mao Geping Cosmetics added value. The underweight allocation to Hon Hai Precision Industry also contributed positively to returns, as its stocks experienced a decline during the period.

The managers focus on areas that can deliver sustainable quality growth over the next three to five years. As a result of the bottom-up stock selection process, the fund has an overweight exposure to China and an underweight allocation to both Hong Kong and Taiwan. Selected consumer and materials stocks are among the key holdings in the portfolio. Alibaba Group Holding is preferred for its robust position in e-commerce sector and growth prospects of its cloud business. MediaTek, a major chip design company in Taiwan, and China Merchants Bank, a leading retail-oriented bank in China, are the other key positions in the portfolio.

FUND SIZE AS AT 30.04.2025 : EUR 227 MILLION

Manager's Overview

Iberian equities delivered strong positive returns and outperformed their European peers over the 12-month period. Political uncertainty in France and Germany, President Trump's election in the US, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and this was followed with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of an efficient AI model by China's DeepSeek. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending in Europe supported markets.

The fund generated positive returns and underperformed the index on a gross basis; however, it slightly underperformed on a net returns basis. Security selection was a positive driver of relative returns, though sector positioning dragged on performance. At a sector level, the underweight positioning in energy and materials, coupled with the overweight exposure to IT names, added relative value. The top contributors to relative returns were Indra Sistemas and Grenergy Renovables. Not holding EDP Renovaveis and Repsol also boosted performance. However, overweight positioning in the health care and industrials sectors detracted from returns. Among the top detractors were Farma Rovi, HBX Group and Acciona Energias.

The fund aims to provide long-term capital growth through investment in a diversified portfolio primarily comprising Spanish and Portuguese equities. The focus is on identifying stocks where the investment thesis is driven by an expected change in growth perception, an external or internal change.

FUND SIZE AS AT 30.04.2025 : USD 2,923 MILLION

Manager's Overview

Indian equities ended the review period in positive territory. Foreign institutional investors halted their selling spree and became the net buyers of Indian equities during the latter part of the period, alongside domestic institutional investors. On the economic front, inflation rate dropped sharply in March. The latest number was below market expectations and also fell below the Reserve Bank of India (RBI)'s tolerance band with a 4% mid-point target. RBI cut the benchmark repo rate by 25 bps, bringing it down to 6.00%, and it also changed the monetary policy stance from 'neutral' to 'accommodative'. Following a period of robust GDP growth, the latest data for 2024 shows a slowdown to 6.4%, down from 7.3% GDP growth for the same period last year. This deceleration is attributed to several factors, such as a slowdown in consumer spending and weaker private sector investments.

The fund outperformed the comparative index over the period. Positive sector contributions came primarily from health care and energy. Fortis Healthcare significantly boosted returns. Within financials, HDFC Bank and ICICI Bank also contributed to performance. On the other hand, materials and industrials detracted from performance. The lack of exposure to Mahindra & Mahindra and Kotak Mahindra Bank weighed on returns.

The portfolio manager believes that equity markets are at best semi-efficient, giving rise to price anomalies. Therefore, a research-driven, bottom-up stock selection approach is the best way to exploit these opportunities, and it is the greatest driver of investment returns. The fund has a quality and growth bias - favouring sustainable businesses that are market leaders in sectors that benefit from India's strong structural growth opportunities, and are run by strong management teams and available at reasonable valuations. More recently, the fund's holdings in defensive sectors have been increased at the margin in view of high market valuations and deceleration in earnings growth. Overall, the fund has an overweight exposure to private sector financials and consumer discretionary businesses.

FUND SIZE AS AT 30.04.2025 : USD 172 MILLION

Manager's Overview

Indonesian equities declined over the period. The deceleration in 2024 has been driven by outflows, a depreciating Indonesian Rupiah (IDR) versus the US dollar, and weaker growth forecast. In the second half of the period, concerns about potential tariff hikes following Donald Trump's election victory in the US and US dollar appreciation subdued investor sentiment in Indonesia and markets across the ASEAN region. In early 2025, the new Prabowo government's fiscal restructuring, setting up of a new sovereign wealth fund and the three million housing program caused concerns about a higher national service burden.

The fund outperformed the benchmark significantly over the period. Security selection in consumer staples was a key driver of relative returns. The holding in Japfa Comfeed gained as the poultry feed supplier reported substantial improvement in net income for the nine months to September 2024, driven by higher average selling prices (ASP) and sales volumes for DOC (Day Old Chick) and broiler segments, as well as lower feed costs. The underweight position in consumer company Unilever Indonesia also proved to be rewarding. Indofood Sukses Makmur was another notable contributor. Conversely, the underweight exposure to Goto Gojek Tokopedia weighed on relative returns. The manager acknowledges the potential to create market excitement fuelled by speculative interest in "adjusted EBITDA" figures and ambiguous guidance, alongside frequent reorganisations and reclassifications of financial data. He remains sceptical on Goto's path to value creation and has reservations about its management quality.

The manager employs a fundamental, bottom-up driven investment approach, supported by stock selection, industry analysis and sustainability assessment. The focus is on identifying mispriced opportunities with attractive risk-reward profiles. Since taking over the fund's management, the manager has consolidated the number of positions in the fund from 55 in March 2024 to 44 as of end-March 2025. The fund has overweight allocations to financials, consumer staples, and real estate sectors.

FUND SIZE AS AT 30.04.2025 : EUR 352 MILLION**Manager's Overview**

Italian equities delivered positive returns over the 12-month period. Political uncertainty in France and Germany, as well as President Trump's election in the US acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators, and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's cost-effective AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund underperformed the comparative index over the period. The overweight exposure to consumer staples and stock selection within industrials hampered relative returns. Performance within consumer discretionary was mixed; losses from weak stock picking were more than offset by the overweight allocation to the sector. Stock picking across healthcare was also rewarding, as was the fund's lack of exposure to energy names. At the stock level, brakes manufacturer Brembo was negatively affected by tariff-related uncertainty. The Italian banking sector saw sharp gains driven by a rise in net profits for the country's top banks. As a result, the underweight allocation to Intesa Sanpaolo pared gains, while the position in Banca Monte Dei Paschi was the top contributor to performance. The lack of exposure to ENI also added value.

The managers look for change opportunities in attractively-valued Italian companies, where the market fails to see future growth potential based on short-term issues or misconceptions. There is an additional focus on strong sustainable characteristics including, but not limited to, governance and superior management of environmental, social and governance issues.

FUND SIZE AS AT 30.04.2025 : JPY 44,164 MILLION

Manager's Overview

The Japanese equity market fell slightly during the period as concerns over US tariffs and their impact on the global economy weighed on investor sentiment in the first quarter of 2025. The second half of 2024 also saw pockets of profit taking, and a strengthening yen that weighed on overall market returns. Earlier in the review period, the market was driven primarily by central bank policy expectations, centred on the BoJ and the US Fed. The fiscal 2024 third-quarter earnings season concluded in February, with aggregate results exceeding market expectations. In macroeconomic news, the BoJ's key short-term interest rate stood at 0.5% at the end of the review period, the highest level since 2008. Meanwhile, Japan's Prime Minister Fumio Kishida announced that he would step down as leader of the ruling Liberal Democratic Party. Former Defence Minister Shigeru Ishiba unexpectedly won the leadership election and, despite initial speculation to the contrary, appeared set to maintain the key policies of the Kishida administration, namely overcoming deflation and raising wages. At a sector level, communication services and financials led the gainers, while materials, energy and utilities were the leading decliners.

The fund underperformed the comparative index over the year. Stock selection in the services and other products sectors detracted from returns, although selection was positive in the wholesale trade and electric appliances sectors. At a stock level, human resources technology and media company Recruit Holdings was susceptible to correction in technology stocks and rising economic uncertainty in the US, which is a key market for its job seeker platform Indeed. Semiconductor production equipment maker Tokyo Electron also underperformed. On a positive note, the holding in entertainment group Sony rose, as the company delivered another strong quarter, driven by its gaming and music segments, and upgraded its full-year guidance. The company also announced a ¥50 billion share buyback.

The fund focuses on quality companies with enhanced sustainable characteristics, and those that can improve their environmental, social and governance credentials through active engagement. Among the largest sector positions are electric appliances, banks, and construction, where we hold high-quality sustainable growth companies.

FUND SIZE AS AT 30.04.2025 : JPY 5,959 MILLION

Manager's Overview

The Japanese equity market fell slightly during the period as concerns over US tariffs and their impact on the global economy weighed on investor sentiment in the first quarter of 2025. The second half of 2024 also saw pockets of profit taking, and a strengthening yen that weighed on overall market returns. Earlier in the review period, the market was driven primarily by central bank policy expectations, centred on the BoJ and the US Fed. The fiscal 2024 third-quarter earnings season concluded in February, with aggregate results exceeding market expectations. In macroeconomic news, the BoJ's key short-term interest rate stood at 0.5% at the end of the review period, the highest level since 2008. Meanwhile, Japan's Prime Minister Fumio Kishida announced that he would step down as leader of the ruling Liberal Democratic Party. Former Defence Minister Shigeru Ishiba unexpectedly won the leadership election and, despite initial speculation to the contrary, appeared set to maintain the key policies of the Kishida administration, namely overcoming deflation and raising wages. At a sector level, communication services and financials led the gainers, while materials, energy and utilities were the leading decliners.

The fund underperformed the comparative index over the year. Stock selection in the electric appliances and precision instruments sectors detracted from returns during the year. Security selection in the retail trade and transportation equipment segments added value. At a stock level, the holding in Ryohin Keikaku was the largest contributor to returns. The operator of the MUJI brand of general merchandise stores reported quarterly earnings that surpassed street estimates due to the improving profitability of its domestic operations, healthy sales in mainland China, and the benefits of favourable currency rates. The company also raised its full-year revenue and profit forecasts. The position in Yonex, the largest badminton racket brand and supplier, contributed to returns after reporting positive results, supported by continuing strong demand and higher traction from its strategy of increasing badminton peripheral products, such as apparels and bags. The lack of exposure to Toyota Motor also supported relative performance amid the uncertainty over the Trump administration's tariff policies and a stronger yen. Within the electric appliances sector, the holding in Mitsui High-Tec fell owing to concerns over slower earnings growth.

Japan continues to offer a wealth of under-researched mid/small-cap growth companies. As active managers based here on the ground, we have the opportunity not only to invest in established global leaders, but also to unearth less well-known companies, where lower levels of analyst coverage can often create some great mispriced opportunities. Identifying under-covered companies with idiosyncratic sources of growth represent a potential source of differentiated returns for the fund. A transition to mild inflation and the normalisation of monetary policy in Japan are positive for both the domestic economy and the stock market. Japanese companies are raising prices across the board and the latest spring wage negotiations are delivering higher levels of income growth, which will provide reassurance on the consumer side. Meanwhile, Tokyo Stock Exchange-led governance reforms are gaining momentum, and we are seeing progress in the rationalisation of cross shareholdings.

FUND SIZE AS AT 30.04.2025 : JPY 191,031 MILLION**Manager's Overview**

The Japanese equity market fell slightly during the period as concerns over US tariffs and their impact on the global economy weighed on investor sentiment in the first quarter of 2025. The second half of 2024 also saw pockets of profit taking, and a strengthening yen that weighed on overall market returns. Earlier in the review period, the market was driven primarily by central bank policy expectations, centred on the BoJ and the US Fed. The fiscal 2024 third-quarter earnings season concluded in February, with aggregate results exceeding market expectations. In macroeconomic news, the BoJ's key short-term interest rate stood at 0.5% at the end of the review period, the highest level since 2008. Meanwhile, Japan's Prime Minister Fumio Kishida announced that he would step down as leader of the ruling Liberal Democratic Party. Former Defence Minister Shigeru Ishiba unexpectedly won the leadership election and, despite initial speculation to the contrary, appeared set to maintain the key policies of the Kishida administration, namely overcoming deflation and raising wages. At a sector level, communication services and financials led the gainers, while materials, energy and utilities were the leading decliners.

The fund marginally underperformed the comparative index over the year. Stock selection in the information & communication segment detracted from returns, but security selection in the retail trade sector contributed. At a stock level, the holding in Ryohin Keikaku was the leading contributor. The operator of the MUJI brand of general merchandise stores reported quarterly earnings surpassing street estimates due to the improving profitability of its domestic operations, healthy sales in mainland China and the benefits of favourable currency rates. The company also raised its full-year revenue and profit forecasts. Meanwhile, shares in information technology services company NEC rose after it positively revised full-year earnings guidance to reflect the strength of its domestic operations, fuelled by municipal government projects and defence contracts, and improving profitability. In the technology space, electronic component manufacturer Taiyo Yuden faced selling pressure as the imposition of trade tariffs by the US sparked concerns about indirect demand destruction.

The portfolio manager follows a bottom-up stock selection approach that focuses on valuation analysis. He typically favours stocks that are undervalued relative to their balance sheet quality, cashflow and earnings growth potential. Factors such as returns on capital and the sustainability of earnings are also important considerations. The manager continues to have a positive view on sectors that benefit from strengthening domestic demand and a recovery in pricing power and wages, normalising monetary policy in Japan and the accelerated unwinding of strategic shareholdings. Key positions in sectors such as construction, IT services, retailing and utilities are relatively well-insulated from the direct impact of the US tariffs.

FUND SIZE AS AT 30.04.2025 : USD 324 MILLION

Manager's Overview

Latin American equities fell during the period and underperformed the broader emerging markets index and developed markets. The biggest markets - Brazil and Mexico - posted negative returns. Brazil was impacted by a deteriorating fiscal backdrop and rising inflation, which prompted its central bank to raise interest rates. Equities in Mexico fell with sentiment impacted by the outcome of the US election, which raised concerns about trade uncertainty. In 2025, Brazil and Mexico experienced relief rallies, recovering some of the losses recorded over 2024. Equities in smaller markets like Peru, Chile, and Colombia delivered positive returns.

The fund posted negative returns and underperformed the comparative index over the period. At a country level, security selection in Canada and Panama (particularly Banco Latinoamericano de Comercio Exterior) added value, while holdings in Brazil and Peru hampered performance. Brazilian positions, such as XP (investment management company) and Armac Locacao (equipment leasing company), and the lack of exposure to Peru's Credicorp (financial services) detracted the most from returns. Candana-listed gold mining company Lundin Gold, and Brazil's Nu Holdings and Direcional Engenharia enhanced gains.

The managers follow a high-conviction, bottom-up, quality growth approach, centred on the belief that companies that exhibit strong cash generation and robust balance sheets offer the most attractive opportunities for investors over the medium to long term. Financials is the largest absolute position. The managers own Brazilian companies such as digital challenger bank Nu Holdings, Inter & Co (the holding company for banking app Banco Inter), and financial services firm Itau Unibanco, alongside Mexico's Regional Bank and Grupo Financiero Banorte. Among industrials, airport operators such as Grupo Aeroportuario del Pacifico and Grupo Aeroportuario del Centro Norte are among the portfolio's key holdings.

FUND SIZE AS AT 30.04.2025 : SEK 4,626 MILLION

Manager's Overview

Nordic equity markets delivered negative returns over the 12-month period. Political uncertainty in Europe and US President Trump's election presented headwinds, but these developments were counterbalanced by moderating inflation, improving economic indicators and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and this was followed with six additional reductions over the period. Mirroring the ECB's move, Denmark's central bank also cut its key policy rate seven times during the period. While Sweden's central bank has also been easing policy to support a stagnant economy, Norway's central bank has held its policy rate steady at 4.5%, due to a weak krone hindering efforts to reduce inflation. These policy moves underpinned market sentiment. Overall, initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which have weighed on equities so far in 2025.

The fund outperformed the comparative index over the period. Telecommunications and health care sectors were the top contributors, with Ericsson and Tele2 driving gains within telecommunications. The lack of exposure to index-heavyweight Novo-Nordisk in health care also added relative value, as its shares fell following disappointing late-stage trial results for its next-generation obesity drug. Conversely, the fund's industrial transportation holdings suffered from a seasonal decline in freight rates and over uncertainties related to weak Chinese demand and geopolitical concerns. This included holdings in product tanker companies Torm, Okeanis Eco Tankers and Stolt Nielsen, which lowered their short-term earnings estimates due to a lack of winter momentum in freight rates.

The current economic backdrop clearly calls for an active, bottom-up and contrarian investment approach, given the potential for some unfavoured (but healthy) cyclical stocks to outperform as the market trades once again on fundamentals, rather than on emotions. Moreover, the portfolio manager continues to find opportunities among attractively valued small and mid-caps, whose prices have suffered greatly from investors' lack of interest in the asset class.

FUND SIZE AS AT 30.04.2025 : USD 732 MILLION

Manager's Overview

Regional equities ended higher despite volatility. Chinese stocks initially struggled with continued property market weakness and subdued consumer confidence but rebounded strongly post the government's stimulus announcement in late September and optimism from DeepSeek's new AI model. Taiwan's technology sector remained robust on AI-related chip demand, while Australian equities rose from solid earnings and steady commodity prices. Toward the period-end, renewed US-China tariff concerns created significant price actions, but tensions eased slightly following news of potential trade negotiations.

The fund underperformed the comparative index over the period. Health care and industrials sectors were the top detractors. In health care, Immunetp negatively impacted returns, while in industrials, Pacific Basin Shipping and FBR underperformed. The lack of exposure to Alibaba detracted from relative returns as shares in Alibaba advanced over the period. Conversely, consumer staples and information technology sectors contributed positively. Within financials, LexinFintech showed significant gains, and VNET Group in information technology also added value. Stock selection in consumer staples proved rewarding.

The manager prefers to own companies with strong structural growth prospects, robust fundamentals, and which are available at attractive valuations. The focus is on innovative companies that are gaining market share in areas such as consumer related, technology and healthcare sectors. IperionX specializes in titanium metal production, using patented technology to refine titanium more cost-effectively. If successful, its method could disrupt the industry by offering lower-cost, high-quality titanium, competing with stainless/alloy products. Medlive Technology drives EPS growth through digital healthcare marketing, benefiting from the shift to online healthcare budgets. Its growth is fuelled by increasing healthcare customers, revenue per customer, and physician penetration in China.

FUND SIZE AS AT 30.04.2025 : USD 5 MILLION

Manager's Overview

Regional equities ended higher despite volatility. Chinese stocks initially struggled with continued property market weakness and subdued consumer confidence but rebounded strongly post the government's stimulus announcement in late September 2024 and optimism from DeepSeek's new AI model. Taiwan's technology sector remained robust on AI-related chip demand, while Australian equities rose on the back of solid earnings and steady commodity prices. Towards the end of the period, renewed US-China tariff concerns created significant price actions, but tensions eased slightly following news of potential trade negotiations.

The fund underperformed the comparative index over the period. Financials and health care sectors were the top detractors from performance, with holdings in Hygeia Healthcare and Hyundai Marine & Fire Insurance being notably weak. Conversely, materials and energy sectors contributed positively, with the lack of exposure to Samsung Electronics and Reliance Industries adding to relative value. Within information technology, Nanya Technology detracted from returns. In the health care sector, Medlive Technology added to the gains, while Hygeia Healthcare detracted from performance.

The fund is focused on a fundamentals-driven search for the best opportunities among sustainable investments that would capture structural growth in Asia and aid positive societal consequences over the long term. The focus is on bottom-up stock selection and to find long-term winners with solid management teams at reasonable valuations. Taiwan's global leading semiconductor foundry TSMC offers structural growth within semiconductors and is a front-runner with cutting edge technology. Broader software adoption will drive workplace and infrastructure efficiencies. India's private sector banks, including HDFC Bank and Axis Bank, are favoured for their ability to widen credit access in an under-supplied market.

FUND SIZE AS AT 30.04.2025 : EUR 406 MILLION

Manager's Overview

European equity markets delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election in the US, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's cost-effective AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund underperformed the comparative index over the period. Both stock picking in and unfavourable allocation to industrials detracted from relative returns, as did the lack of exposure to communication services. Conversely, stock picking within the utilities and materials sectors was additive to gains, while the lack of exposure to energy also proved to be rewarding. At the stock level, several high-quality companies with strong fundamentals such as Novo-Nordisk, Edenred, LVMH and L'Oréal declined due to temporary factors. Top performers included UK-based bank NatWest, renewable energy operator Neoen and software business SAP.

The managers look for companies with strong sustainability that also offer the best financial and non-financial performance potential. Sustainable characteristics may include, but are not limited to, governance and superior management of environmental and social issues. The fund remains concentrated with a focus on growth and quality stocks that offer sustainable returns.

FUND SIZE AS AT 30.04.2025 : USD 6 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced and then paused sweeping tariffs. Against this global backdrop, financials, utilities and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices.

The fund underperformed the comparative index over the period as it proved to be a difficult environment, marked by high interest rates, inflation, and geopolitics-related uncertainty, for the sustainability-themed opportunity set. At a sector level, information technology and industrials were the key detractors from relative returns. Within information technology, Informatica was notably weak, while Advanced Drainage Systems in the industrial sector also detracted from performance. The holding in ICON was another notable source of weakness as its shares fell sharply due to a significant third-quarter revenue miss caused by budget cuts, project delays, cancellations and slow decision-making by biotechnology customers. Conversely, a lack of exposure to energy stocks proved to be rewarding, as did selected materials holdings. Marvell Technology was among the largest contributors to performance, as it reported better-than-expected third-quarter results with AI-related revenues coming in ahead of expectations, alongside the announcement of an expanded deal with Amazon.

The portfolio management team have an investment approach that focuses on companies that enable the transition to a sustainable economy and contribute to the UN Sustainable Development Goals (SDGs). In essence, the companies addressing the biggest environmental and social challenges with positive contribution to SDGs stand to earn higher and more durable returns over time. These quality franchises have favourable ESG characteristics, attractive financial fundamentals and/or sustainable or improving return on invested capital, good management with aligned incentives, and compelling valuations.

FUND SIZE AS AT 30.04.2025 : USD 74 MILLION

Manager's Overview

US equities fell over the 12-month period. In the period ending December 2024, companies perceived as beneficiaries of the AI theme performed strongly. Resilient economic data, robust corporate earnings and easing monetary policy by major central banks supported markets. However, US equities saw a period of significant volatility during last summer as surprisingly weak economic data combined with the BoJ's rate hike led to a sharp sell-off in markets. Nevertheless, markets quickly recovered as economic data picked up and the US exceptionalism narrative prevailed. Since January 2025, US markets have entered a period of increased volatility. Equities had a strong start to the year, reflecting optimism around the new administration's promises of deregulation and tax cuts, and a strong start to the earnings season. However, markets became volatile at the end of January, as the heavy concentration in highly valued technology stocks weighed on performance in the wake of China's DeepSeek claiming the development of efficient low-cost AI models. Since then, volatility has continued as markets digested the implications of rising trade tensions between the US and the rest of the world. Over the year, all sectors, except energy and materials, gained, with financials and utilities seeing the strongest performance.

The fund underperformed the comparative index over the period. Security selection in information technology and market positioning in the health care sector hurt relative performance, with stocks such as Informatica Inc and ICON PLC being the notable detractors from returns. Conversely, consumer staples contributed positively, with the holding in Vital Farms benefitting from sustained consumer demand for premium, ethically produced food products. The lack of exposure to energy sector (which does not meet the sustainable investment criteria) enhanced relative value. The portfolio management team have an investment approach that focuses on companies that enable the transition to a sustainable economy and contribute to the United Nation's Sustainable Development Goals (SDGs).

In essence, the US companies addressing the greatest environmental and social challenges with positive contribution to UN SDGs stand to earn higher and more durable returns over time. These quality franchises have favourable environmental, social and governance (ESG) characteristics, attractive financial fundamentals and/or sustainable or improving return on invested capital, good management with aligned incentives and compelling valuations. At a sector level, the fund has meaningful exposure to SDG enablers across sectors, including information technology, healthcare and industrials sectors. These franchises benefit from structural growth themes with the potential to deliver significant positive environmental and societal impact.

FUND SIZE AS AT 30.04.2025 : CHF 231 MILLION

Manager's Overview

Switzerland equities, along with their European peers, delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators, and corporate resilience. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of DeepSeek's AI model. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets.

The fund generated positive returns but underperformed the index. Both security selection and sector positioning detracted from performance. At a sector level, stock picking in health care and the overweight position in materials predominantly dragged on relative returns. The top detractors from relative returns were health care names Tecan and Roche (underweight), and materials businesses Clariant and Sika. Positively, strong performance of financials and consumer staples stocks added relative value. Among the top contributors were financials stocks VZ Holding and Swiss Re, along with the underweight position in food business Nestle.

The fund continues to focus on companies with high-quality business models and management teams. It maintains a sizable allocation to the health care, financials, industrials, materials, and consumer staples sectors. Relative to the index, the fund has an underweight stance in consumer staples and health care, and an overweight position in materials, industrials, and financials.

FUND SIZE AS AT 30.04.2025 : USD 118 MILLION

Manager's Overview

Thai equities declined over the review period. Most of the sectors ended in negative territory with materials, industrials and consumer discretionary among the key laggards. Meanwhile, financials and communication services were the notable gainers. Concerns about a US recession and uncertainties surrounding the implementation of US tariffs hurt sentiment towards major export-driven Asian markets. On the economic front, Thailand experienced a slower-than-expected GDP growth in the fourth quarter of 2024. Nevertheless, the quarterly GDP figure marked the strongest yearly rise since the third quarter of 2022.

The fund outperformed the comparative index over the period. Information technology and consumer discretionary sectors contributed positively. At a stock level, the holding in True Corp. enhanced gains. The position in Praram 9 Hospital (P9) extended its positive run in the second half of the period. Krung Thai Bank gained as its full-year earnings exceeded consensus estimates. Not holding Energy Absolute and PTT Global Chemical also proved to be beneficial. The energy sector was a significant detractor during the period, particularly stocks such as Borr Drilling and Valaris. The decline was mainly due to weakness in oil prices, primarily driven by concerns over slowing global demand, particularly from China, a major global buyer. Shares in leading decorative paint company TOA Paint decelerated following speculation that the securities and exchange commission (SEC) is investigating stock price manipulation at another company potentially involving the family of TOA's founder. We believe there should be no impact of this on TOA Paint and therefore, we maintain the position.

The fund employs a fundamental, bottom-up driven investment approach, supported by stock selection, industry analysis and sustainability assessment. The focus is on identifying mispriced opportunities with attractive risk-reward profiles. As on 30 April 2025, the fund has an overweight position in healthcare, energy and industrials sectors with key overweight positions in hospitals such as Bangkok Dusit Medical Services (BDMS) and P9. BDMS is the largest private hospital and has the potential to deliver more than its conservative top-line and margin guidance.

FUND SIZE AS AT 30.04.2025 : GBP 93 MILLION

Manager's Overview

UK equities performed strongly in 2024 and continued their advance in 2025, overcoming spells of volatility, while remaining sensitive to inflation, interest rate dynamics and trade policy developments. The period started on a strong note as central banks signalled that interest rates were approaching their peak, with inflation in the UK gradually moving closer to the BoE's 2% target, driving the FTSE All-Share to record highs in May 2024. In a notable shift, the BoE in July reduced its policy rate by 25 bps to 5.0%, its first rate cut in over four years. However, market confidence was subsequently tested by concerns over a potential recession in the US and the unwinding of yen carry trades following the BoJ's unexpected interest rate hike. Domestic challenges like slowing economic activity also added to the uncertainty. However, these concerns proved to be short-lived as markets found support in the accommodative messaging from central banks and fresh stimulus measures in China. October's budgetary announcement, while having a limited direct effect on equities, influenced the UK's government bond market as plans for additional borrowing were unveiled. Meanwhile, the BoE continued its easing cycle with another 25 bps cut in November and February, respectively. 2025 began on a strong note as UK markets responded favourably to Donald Trump's decisive election victory. Investors sought diversification opportunities away from US technology stocks, which had been affected by the rise of Chinese startup DeepSeek's efficient AI model that put the spotlight on elevated technology valuations. UK equities continue to remain at a significant valuation discount and has helped to underpin market strength. April was another extraordinary month, marked by heightened market volatility following the US's reciprocal import tariff announcements. While the UK was subjected only to a baseline 10% duty on its exports to the US, it was notably exempt from the additional punitive levies, which was viewed as a constructive outcome.

The fund recorded positive returns and outperformed the comparative index over the year. Stock selection in the consumer staples and health care sectors contributed to returns. However, the underweight stance in the technology sector and security selection in industrials held back relative performance. The position in tobacco group Imperial Brands rose after the company posted annual results, which showed that revenues from next generation products such as vapes and heated tobacco rose strongly. The company said it expects a strong fiscal 2025 on the back of continued revenue growth from tobacco alternatives. The underweight exposure to health care group AstraZeneca and the lack of exposure to energy group BP also contributed to relative performance. On the downside, John Wood was the leading detractor. The company maintained its full-year profit and net debt expectations, but cautioned that an independent audit review of the group's accounts was being conducted.

Despite their improved performance over recent years, UK equities still look cheap relative to other markets, and reasonable on an absolute basis. We believe that the combination of attractive valuations and the large divergence in performance between different parts of the market create good opportunities for attractive returns from UK stocks on a three-to-five-year view. Although the UK market continues to remain largely unfavoured by domestic investors, its attractive valuations are being recognised by other market participants, such as overseas corporates and private equity firms who have been amongst the biggest bidders in the UK market. The sharp increase in merger & acquisition activity, which remains a key feature in the fund, underlines their interest in the UK market.

FUND SIZE AS AT 30.04.2025 : USD 980 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the main laggard. Most key regions ended higher, with gains led by the UK, Europe ex UK, and Asia Pacific ex Japan.

The fund underperformed the comparative index over the period. Exposures to the industrials and information technology sectors detracted from performance, primarily due to weakness in selected holdings, such as Entegris Inc and Horiba Ltd within information technology. However, sector allocation within utilities and health care contributed positively, with stocks like Severn Trent PLC and Veolia Environment SA in the utilities sector particularly driving gains. At a country level, several US industrial holdings detracted from performance, including Tetra Tech Inc New and Advanced Drain Systems.

The managers look to maintain a high-purity thematic fund, aiming to deliver long-term capital growth through investing in global equities with sustainable water and waste practices across water and waste value chains. The fund is balanced across the water and waste sectors due to bottom-up stock selection, with a slight bias towards water holdings. The long-term megatrends of urbanisation, population growth, growing consumption, ageing infrastructure, climate change, and responsible resource consumption will drive the water and waste management sectors. Supportive regulations and larger-than-expected infrastructure investment back these megatrends. Companies that are exposed to the value chains of these core themes should provide above-benchmark returns across the market cycle.

FUND SIZE AS AT 30.04.2025 : USD 5,397 MILLION

Manager's Overview

Developed market equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. The information technology sector was a significant detractor from returns, with notable underperformance due to the underweight positions in Apple and Nvidia. The underweight exposure to Meta Platforms also weighed on relative performance. On the positive side, the energy sector contributed positively to the fund's performance, with Cheniere Energy making substantial gains, supported by solid capital returns underpinned by long-term contracts. The financials sector also added value, with Deutsche Boerse delivering strong returns, benefitting from improved sentiment around Germany's economic outlook.

The portfolio managers look for businesses with the potential of absolute share price appreciation and a change or catalyst to realise that appreciation. At a sector level, the fund has an overweight stance in consumer discretionary, investing in businesses exhibiting a strong brand with a demonstrated consumer moat that is reflected in superior pricing power, innovation, and intellectual property. The exposure to financials is a combination of high-quality US and European banking franchises with strong balance sheets, credit quality, and prudent underwriting practices; alongside insurers with robust pricing power, exchange operators, and payment services providers. The fund also has an overweight position in health care. Valuations across the sector are being impacted against the uncertain political backdrop, providing an opportunity to gain exposure to innovative companies with excellent products and pipelines.

FUND SIZE AS AT 30.04.2025 : USD 326 MILLION

Manager's Overview

Equities in the Asia Pacific ex Japan region continued to rise, bolstered by China's stimulus measures aimed at enhancing domestic demand and economic recovery. Chinese internet and technology stocks experienced significant growth, largely due to optimism around AI startup DeepSeek, which helped to reduce concerns about China's real estate sector. Taiwan's IT market remained robust with sustained demand for AI-related memory chips. India's strong economic growth supported domestic stock performance and investor confidence, while Australian equities benefitted from solid corporate earnings and stable commodity prices. Despite tariff-driven volatility from US-China trade tensions, negotiations helped to alleviate some concerns towards the end of the period.

The fund underperformed the comparative index over the period. Samsung Electronics was a major detractor from returns as its high-bandwidth memory (HBM) chips did not meet Nvidia's testing standards, leading to concerns about it losing ground to key competitors. Meanwhile, the weak performance of Treasury Wine Estates reflected potential challenges in the company's premium wine segment, including subdued consumer sentiment in its major markets like Americas, alongside broader structural headwinds in the alcohol sector. The lack of exposure to non-dividend yielding Chinese internet companies like Tencent and Alibaba contributed positively as their shares fell over the period. On the other hand, Evolution Mining and Singapore Exchange (SGX) were the notable contributors. Evolution advanced as it followed the strength in gold prices. Meanwhile, SGX gained in line with the strength of the domestic equity market and Singapore's plans to revive its stock market during 2024.

The manager looks for companies with strong business moats and credible capital allocation policies, which should offer investors compounding returns and dividend payments. He prefers companies with a sustainable dividend stream that are supported by strong balance sheets and predictable cash flows. Taiwan Semiconductor Manufacturing Company is a key holding in the fund as it remains a front-runner with cutting edge technology. It has a strong business moat and a long runway of growth from new applications in fifth generation (5G) devices, AI, autonomous driving and the Internet of Things. Samsung Electronics is a global leader in memory chips, handsets, display panels, and consumer electronics products. It is the market leader in the memory market which has seen significant consolidation, resulting in lower cyclicality and higher returns through-cycle.

FUND SIZE AS AT 30.04.2025 : EUR 948 MILLION

Manager's Overview

European equity markets delivered positive returns over the 12-month period. Political uncertainty in France and Germany, President Trump's election, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds, but these were largely offset by moderating inflation, improving economic indicators, corporate resilience and Europe coming back into favour versus the US. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the period. These policy moves underpinned market sentiment. Initial optimism following the US election was tempered by renewed tariff threats targeting EU imports, which briefly weighed on equities in early 2025. Volatility was also fuelled by concerns over technology valuations after the launch of a cost-effective AI model by China's DeepSeek. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets. While the second quarter 2025 has begun with a pullback due to the newly announced US trade tariffs and reciprocal measures, losses were quickly recovered amid hopes for negotiations and a 90-day pause in tariff implementation. Despite lingering uncertainty, stronger-than-expected eurozone GDP growth and a rotation into domestically focused companies—seen as more insulated from external trade risks—helped to sustain overall market gains.

The fund outperformed the comparative index over the period. Financials and health care sectors were the top contributors to performance, with stocks like Novo-Nordisk AS and 3i Group adding significant value. Conversely, communication services and industrials sectors detracted from returns, impacted by holdings such as Bunzl. An overweight stance in the financials sector and stock selection in the health care sector proved to be rewarding. Elsewhere, the lack of exposure to Novo-Nordisk AS and ASML Holding NV contributed positively, while not holding HSBC Holdings PLC and SAP SE detracted from relative returns. At a country level, selected UK holdings contributed positively, while exposure to France detracted from performance.

The fund is defensively positioned. The main overweight positions are in the financials, industrials, and consumer staples sectors, while the largest underweight position is in the healthcare sector.

FUND SIZE AS AT 30.04.2025 : EUR 9 MILLION

Manager's Overview

European equity markets delivered positive returns over the 12-month period. Through to the end of 2024, political uncertainty in France and Germany, the US presidential election, and persistent geopolitical tensions from the Ukraine-Russia conflict acted as headwinds. In contrast, moderating inflation, improving economic indicators, corporate resilience, and Europe coming back into favour versus the US supported European equity markets. In response to easing inflation and subdued growth, the ECB reduced its key rates by 25 bps in June—the first cut since 2019—and followed this with six additional reductions over the 12-month period. These policy moves underpinned market sentiment. At the start of the year, initial optimism following the US election was tempered by renewed tariff threats targeting EU imports. Volatility was also fuelled by concerns over technology valuations after the launch of a cost-effective AI model by China's DeepSeek. Nonetheless, robust earnings, relatively low exposure to the technology sector, optimism around conflict resolution in Ukraine, and increased defence spending supported markets. The second quarter begun with a pullback due to the newly announced US trade tariffs and reciprocal measures. However, losses were quickly recovered amid hopes for negotiations and a 90-day pause in tariff implementation. Despite lingering uncertainty, stronger-than-expected eurozone GDP growth and a rotation into domestically-focused companies—seen as more insulated from external trade risks—helped to sustain overall market gains.

The fund outperformed the comparative index over the period. An overweight stance in the financials sector and the underweight positioning and strong stock selection in the health care sector proved to be rewarding, with stocks like Novo-Nordisk AS and 3i Group adding significant value. Conversely, communication services and industrials sectors detracted from returns, impacted by holdings such as Bunzl. Elsewhere, the lack of exposure to Novo-Nordisk AS and ASML Holding NV contributed positively, while not holding HSBC Holdings PLC and SAP SE detracted from relative returns.

The fund's overall exposure is diversified but relatively defensive. The fund's main overweight positions are in the financials and communication services sectors, while the largest underweight stance is in the healthcare sector.

FUND SIZE AS AT 30.04.2025 : USD 15,573 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund outperformed the comparative index over the period. In terms of sector performance, financials and health care were the top contributors to returns. Within the financials sector, Deutsche Boerse and Munich Re provided substantial gains. Conversely, communication services and information technology detracted from performance, owing to the lack of exposure to NVIDIA and Apple, as both these stocks benefitted from the AI-driven momentum. Our valuation discipline and the little to no dividends paid by these businesses make them unsuitable for our dividend-based total return approach.

The portfolio remains defensively positioned. The fund has key holdings in the consumer staples, non-life insurance, financial exchanges, pharmaceuticals and other sectors with limited correlation to economic growth. In the more cyclical parts of the market, the fund holds many mature businesses in the technology space, particularly in the semiconductor and hardware industries, that meet its investment criteria. Industrials are an attractive source of investment ideas given exposure to long-term demand drivers. Other large sector positions are held in consumer staples, health care and utilities as these are more classically defensive businesses.

FUND SIZE AS AT 30.04.2025 : USD 705 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund outperformed the comparative index over the period. Stock selection in the financials and the healthcare sectors proved to be rewarding. However, both market positioning and weak stock selection within the consumer discretionary and the information technology sectors detracted from returns. At a stock level, holdings in Deutsche Boerse and 3i Group supported returns. However, shares in Samsung Electronics and UPM Kymmene weighed on returns.

Dividend strategies can offer diversification away from growth stocks whose valuations are most susceptible to negative surprises. Given the fund's investment philosophy and objective to achieve both an attractive yield and capital growth with relatively low volatility versus the index and peer group, we are focused on stocks that provide a secure income and offer the prospect of dividend growth whilst delivering low volatility on returns and steady capital growth over the long term. We will continue to invest in high-quality companies with strong balance sheets and attractive valuations, and where we have a high level of confidence in the persistence of cash flows across the cycle that can support an attractive, growing dividend.

FUND SIZE AS AT 30.04.2025 : USD 508 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund outperformed the comparative index over the period. Strong contribution came from the financials sector, notably from Deutsche Boerse and Munich Re, which significantly boosted returns. Additionally, utilities also proved to be beneficial, with Iberdrola enhancing performance. Conversely, the lack of exposure to IT stocks like Nvidia and Apple detracted from relative value as both stocks benefitted from the AI-driven momentum. Our valuation discipline and the little to no dividends paid by these businesses make them unsuitable for our dividend-based total return approach.

Regional and sector weightages are an outcome of the strategy's bottom-up approach to stock selection. The fund's largest absolute and relative sector exposure is to financials. However, our holdings within the sector are typically higher quality, defensive, long-term compounding businesses with low balance sheet risk. Industrials are an attractive source of investment ideas, given the exposure to long-term demand drivers. Our holdings within the IT sector primarily comprise technology hardware companies (e.g. TSMC, Cisco). We are absent from the richly valued 'Magnificent 7' stocks, which pay little to no dividends. The portfolio is either absent or heavily underweight in certain areas of the market that are not compatible with the strategy's criteria.

FUND SIZE AS AT 30.04.2025 : USD 762 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund outperformed the comparative index over the period. The financials sector, notably Deutsche Boerse and Munich Re, strongly contributed to returns. Additionally, industrials also proved to be beneficial, with RELX enhancing performance. Conversely, the lack of exposure to Nvidia, Apple, Tesla, and Broadcom detracted from relative value as these stocks benefitted from the AI-driven momentum. Our valuation discipline and the little to no dividends paid by these businesses make them unsuitable for our dividend-based total return approach.

The fund focusses on sustainable businesses with strong environmental, social and governance (ESG) characteristics. Regional and sector weightages are an outcome of the strategy's bottom-up approach to stock selection. The fund's largest absolute and relative sector exposure is to the financials sector. However, our holdings within the sector are typically higher quality, defensive, long-term compounding businesses with low balance sheet risk. Industrials are an attractive source of investment ideas, given the exposure to long-term demand drivers. Our holdings within the IT sector primarily comprise technology hardware companies (e.g. TSMC, Cisco). We do not hold the richly valued 'Magnificent 7' stocks, which pay little to no dividends. The portfolio is either absent or heavily underweight in certain areas of the market that are not compatible with the strategy's criteria.

FUND SIZE AS AT 30.04.2025 : USD 54 MILLION

Manager's Overview

Equities in the Asia Pacific ex Japan region rose over the period. Stimulus measures announced by China and investor optimism around AI startup DeepSeek helped to offset some of the broader economic concerns in China's real estate sector. Trade tensions between US and China also kept markets in check, but subsequent discussions around negotiations helped ease some of the concerns. US dollar-denominated Asian investment-grade and high-yield bonds rose, driven by increased economic activity and supportive government policies, which improved the credit outlook.

The fund generated positive returns and attractive income in line with its objective. The core allocation to Asian dividend and defensive equities supported performance amid strong investor confidence. Tactical positions in Taiwanese equities added significant value, driven by sustained AI-related memory chip demand. Positions in the US and Singapore equities also helped. The allocation to Asian investment-grade and high-yield bonds benefitted from the positive sentiment around measures unveiled by Chinese policymakers to stimulate the economy. Within alternatives, gold acted as a tailwind.

Trade shocks pose a significant risk to overall growth and will keep volatility high, warranting a cautious outlook in Asian markets. The managers actively managed equity risk over the year and moved from a risk-on position to a cautious stance in the short-term amid increased market volatility. The US put options were added to provide downside protection to the fund. They tactically added to areas of conviction like Indian, Japanese mid-cap and banks, and Asian IT equities, while selling Taiwan equities exposure. The managers have significantly added to duration assets, especially to US Treasury, Australia and New Zealand government bonds, as they should act as a hedge against weakening global growth. Investment-grade bonds were reduced due to tight spreads. Exposure from emerging market local currency bonds was moved to Asian high-yield bonds, whose spreads widened. Elsewhere, gold was added, and the volatility strategy was sold.

FUND SIZE AS AT 30.04.2025 : EUR 388 MILLION

Manager's Overview

European equities and bonds faced significant volatility driven by geopolitical tensions, tariff disputes, and shifts in central bank policies, but they still delivered positive returns. The ECB's rate cuts, expectations of further monetary easing, and European fiscal support related to defence spending helped investor sentiment.

The fund distributed income in line with its objective and generated positive returns over the period. The core European dividend equities helped as dividend equities outperformed broad market equities. European defence equities also aided performance on the back of increased defence spending by the governments. The exposure to European high-yield and investment-grade bonds contributed to performance, driven by resilient credit markets, declining yields and strong corporate fundamentals. The allocation to hybrid and structured credit strategies also enhanced gains.

Trade shocks are a material risk to the overall growth backdrop and will keep volatility elevated. Given challenging market conditions, the managers are becoming more cautious on risk in the short term, as returns in 2025 are likely to be more volatile. Over the year, equity exposure was reduced. The managers rotated from broad European equity future to European dividend equities as German fiscal spending could boost short-term outlook. They sold healthcare equities as the thesis played out. A new position in defence equity was added to benefit from increased government spending in the defence sector. Hedges were added for downside protection as the market is sensitive to trade policy announcements. Credit risk was roughly unchanged, and the managers took profits from convertible bonds to increase the liquidity of the portfolio, while adding to European high-yield debt given strong fundamentals and attractive all-in yields. Exposure to interest rate-sensitive assets, such as German government bonds, was increased as a hedge against weakening global growth. Within alternatives, listed infrastructure holdings were sold that were facing prolonged technical headwinds.

FUND SIZE AS AT 30.04.2025 : EUR 94 MILLION

Manager's Overview

Global equities rose over the period, supported by easing monetary policy in most developed markets and resilient economic growth, despite geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts from major central banks, and China's stimulus measures bolstered investor sentiment, although an interest rate hike by the Bank of Japan in July 2024 caused market volatility. The second half started optimistically after Donald Trump's election win in November, but sentiment shifted due to the US Fed's cautious approach on rate cuts in 2025 and trade policy uncertainty. Concerns intensified regarding the implications of US trade policies, leading to heightened volatility in April 2025. Global fixed income markets delivered positive returns despite elevated volatility, driven by shifting monetary policy expectations, inflation uncertainty, and escalating geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts, supported by demand for safe-haven assets amid global instability.

The fund generated positive returns over the review period. Within the tactical asset allocation segment, opportunistic fixed income holdings aided returns, driven by short duration assets and hybrid bonds, alongside select equity and emerging market hard currency bond exposure. In the strategic asset allocation segment, returns were supported by high-quality government bonds, notably issued by the Netherlands and Austria, and equity exposure, where gains in technology were partially offset by global industrials and financials. Hedging assets also added to performance, with physical gold and options, used for protection during drawdowns, contributing positively. However, the commodities segment acted as a headwind to overall returns.

The Fidelity Funds - Global Multi Asset Defensive Fund aims to achieve a better downside profile versus a blend of 20% MSCI All Country World Net Total Return EUR Index and 80% Bloomberg Global Aggregate EUR Hedged Index on a rolling three-year basis. This is an objective and not a guarantee. The fund does not use a comparative index for performance purposes.

FUND SIZE AS AT 30.04.2025 : USD 140 MILLION

Manager's Overview

Global equities posted positive returns over the period. Equity markets gained over the first half of the period as signs of easing inflation and healthy US economic data supported prospects for monetary policy easing. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025, trade policy uncertainty and growth concerns. Global bond markets faced significant volatility and broadly delivered positive returns. Sovereign bonds faced early headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened, prompting easing cycles from major central banks. The US Fed, ECB and the BoE cut interest rates during the review period. In early 2025, global risk aversion intensified after the US imposed tariffs on Canada, Mexico, and China. Corporate bonds generated positive returns, supported by stable macro conditions.

The fund generated positive returns over the period due to the dynamic allocation to equities amid a volatile market backdrop. US equity strategies contributed meaningfully to returns, especially in the first half of the period due to expected tax cuts and fiscal policy expansion under the incoming Trump administration. The gradual addition to European equities since late 2024 also gained due to robust corporate earnings, easing monetary policies and a potential resolution to the Ukraine crisis. Within fixed income, the allocation to high-quality global bonds, income-paying bonds, and high-yield bonds led to gains. Elsewhere, the exposure to physical gold proved to be rewarding.

The managers remain nimble on equity positioning and prefer to stay more defensively positioned, while they continue watching policy announcement and their implementation, which could possibly sway the growth outlook. They remain cautious on US equities in anticipation of continuing market volatility due to ongoing trade tensions, fears of persistent inflation, and early signs of an economic slowdown. The managers remain constructive on non-US exposure as these regions are better supported to address the US tariff implication. On style, they retain the preference for quality companies with strong balance sheet and cashflow to deal with the policy uncertainties. Meanwhile, they prefer non-US dollar exposure in fixed income assets and retain the allocation to gold as a portfolio diversifier amid heightened global geopolitical uncertainty.

FUND SIZE AS AT 30.04.2025 : USD 103 MILLION

Manager's Overview

Global equities and bonds advanced over the period. Geopolitical tensions, US trade policy uncertainties and their potential impact on growth, alongside sticky inflation, challenged sentiment. However, investor sentiment was ultimately supported by easing monetary policy across most developed markets, resilient economic growth, and positive policy measures by central banks.

The fund generated positive returns and attractive income in line with its objective. The core global dividend equities helped amid positive investor sentiment. Greek equities also aided returns, driven by strong corporate earnings and foreign investor participation. Elsewhere, the allocation to global investment-grade and hybrid bonds also helped returns. Within alternatives, gold, loans and structured credit holdings acted as tailwinds.

Trade shocks pose a significant risk to overall growth and will keep volatility high. The managers actively managed equity risk over the year and moved from a risk-on to a cautious stance in the short-term amid increased market volatility. The US and European put options were added to provide downside protection to the fund. They tactically added to areas of conviction like German mid-caps, Japanese, Greek, and defence equities. Positions in Chinese equities were increased on expectations of policy support. The exposures to energy, Latin America and European financials were sold. The managers have significantly added to duration assets, especially to US Treasury bonds, as they should act as a hedge against weakening global growth. Brazil government bonds were added to provide uncorrelated exposure to the broader bond market. Investment-grade bonds were reduced due to tight spreads. Profits were taken from hybrid bonds, and US high-yield bonds were added given attractive yields. Elsewhere, the exposure to gold was increased for its defensiveness and listed third-party renewable energy and real estate holdings were sold.

FUND SIZE AS AT 30.04.2025 : USD 4,238 MILLION

Manager's Overview

Global equities and bonds advanced over the period. Geopolitical tensions, US trade policy uncertainties, and their potential impact on growth, alongside sticky inflation, challenged sentiment. However, investor sentiment was ultimately supported by easing monetary policy across most developed markets, resilient economic growth, and positive policy measures by central banks.

The fund generated attractive income in line with its primary objective and delivered positive returns. The allocation to high-yield bonds aided performance due to accommodative monetary policies by major central banks. The allocation to hybrid bonds helped returns. US Treasuries performed strongly as investors sought the relative safety of the asset class. Elsewhere, core global dividend equities helped amid positive investor sentiment. Active use of US equity hedges added value given ongoing trade uncertainty. Defence equities also aided performance on the back of increased defence spending by European governments. The exposure to loans and structured credit also enhanced returns.

Trade shocks pose a significant risk to overall growth and will keep volatility high. Due to challenging market conditions, managers are more cautious on short-term risk, anticipating volatile returns in 2025. Equity exposure was dynamically managed throughout the year. US equity exposure was reduced with added put options for downside protection amid market volatility. Positions in Chinese equities were increased on expectations of policy support. A new defence equity position was added, anticipating higher government defence spending. European dividend equities were added, anticipating a boost in growth from German fiscal spending. Positions in Japanese, Korean, energy, and healthcare equities were sold. Profits from hybrid bonds were taken to enhance portfolio liquidity. Exposure to high-yield bonds was increased, due to strong fundamentals and appealing yields, although we recently reduced our US allocation. Holdings in interest rate-sensitive assets like US, UK, Australian, and Mexican government bonds were increased as a hedge against weakening global growth, while hedges on US Treasuries were sold. Investment-grade bonds were reduced due to tight spreads. Within alternatives, listed third-party infrastructure holdings were sold due to prolonged technical headwinds.

FUND SIZE AS AT 30.04.2025 : USD 124 MILLION

Manager's Overview

Global equities posted positive returns over the period. Equity markets gained over the first half as signs of easing inflation and healthy US economic data supported prospects for monetary policy easing. The outcome of the US presidential election and supportive policy stance in China also boosted investor sentiment. However, markets saw increased volatility over the second half of the review period with concerns around trade tariffs and their potential impact on inflation and growth in the US. Global bond markets faced significant volatility during the period but broadly delivered positive returns. Sovereign bonds faced headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened and major central banks, including the US Fed, the ECB and the BoE all cut interest rates. In early 2025, global risk aversion intensified after the US imposed tariffs on Canada, Mexico, and China. Corporate bonds generated positive returns, supported by stable macro conditions.

The fund generated positive returns. Growth assets contributed the most to returns, owing to the allocations to high-yield bonds, emerging market debt, and private credit. Within Inflation assets, physical gold holding proved to be rewarding on the back of a volatile market backdrop. Within defensive assets, exposure to government bonds and options, used for protection, added value, while hedging positions in developed and emerging market equities offset some gains.

The fund invests in traditional and non-traditional asset classes and will use passive and active building blocks. It combines top-down macroeconomic insights with bottom-up research to make tactical asset allocation decisions, while using strategies, including quantitative signals and qualitative insights, to dynamically manage downside risk. The fund will dynamically change its asset allocation based on the prevailing inflation environment.

FUND SIZE AS AT 30.04.2025 : USD 78 MILLION

Manager's Overview

Global equities and bonds advanced over the period. Despite geopolitical tensions, US trade policy uncertainties and their potential impact on growth, besides sticky inflation, investor sentiment was supported by easing monetary policy across most developed markets, resilient economic growth, and positive fiscal measures by central banks.

The fund generated positive returns and attractive income in line with its objective. The allocation to core global dividend equities helped amid positive investor sentiment. Active use of options strategies placed on US equities added value given ongoing trade uncertainty. Elsewhere, global high-yield bonds aided performance due to accommodative monetary policies by major central banks. The allocation to hybrid bonds also helped returns. US Treasuries performed strongly as investors sought the relative safety of the asset class.

Trade shocks are a material risk to the overall growth backdrop and will keep volatility elevated. Given challenging market conditions, the managers are becoming more cautious on risk in the short term, as returns in 2025 are likely to be more volatile. Over the year, there was dynamic management of equity exposure, particularly around the US elections and trade policy announcements. The managers reduced US equity exposure in large-cap and financials and added put options for downside protection due to market volatility. Chinese equities were added based on positive expectations of policy support in China. Elsewhere, positions were sold in US technology sector on the back of fading performances of major technology giants. Positions were also sold in Japanese, Korean and healthcare equities. Profits were taken from hybrid bonds to increase the liquidity of the portfolio, instead exposure to high-yield bonds was increased due to strong fundamentals and all-in yields. Exposure to interest rate-sensitive assets, such as US, UK, Australian and Mexican government bonds, was increased as a hedge against weakening global growth. Within alternatives, listed third-party alternative holdings were sold given prolonged technical headwinds.

FUND SIZE AS AT 30.04.2025 : USD 14 MILLION

Manager's Overview

US dollar-denominated Asian investment-grade (IG) bonds posted positive returns even as credit spreads widened during the period. The US Treasury curve experienced enhanced volatility as the Fed began its easing cycle and cut interest rates by 100 bps between September and December 2024. In Asia, the macroeconomic landscape posed challenges, particularly with the implementation of tariffs announced by the incoming Trump administration and China's retaliatory measures. However, despite these challenges, the Chinese credit market remained resilient, particularly in the IG bonds segment, which benefits from strong technical support and robust domestic demand. The Chinese economy expanded by 5% in 2024, meeting the official growth target. During the National People's Congress meeting in March 2025, the Chinese government set a GDP growth target of around 5% for 2025. On the policy front, the People's Bank of China (PBoC) cut key lending rates. Asian manufacturing activity remained subdued as PMIs for most countries generally declined over the period, except for the Philippines and Thailand, which recorded an improvement.

The fund posted positive returns and underperformed the comparative index over the period. From a sector perspective, the underweight allocation to quasi-sovereigns and the marginal overweight position in property names weighed on relative performance. Conversely, the overweight exposure to banks & brokers, insurance and utility contributed to relative returns. From an issuer perspective, the overweight allocation to Oversea-Chinese Banking, Mirae Asset Securities and Meituan added notable value, while the underweight position in Mitsubishi UFJ Financial Group, Tencent Holdings and Standard Chartered held back gains. On the ratings front, the allocation to all A and above-rated bonds weighed on returns, while BBB and below-rated bonds added value.

We expect Asian IG bonds to remain attractive given favourable macro conditions, solid aggregate fundamentals and technical factors. We favour Asia local rates, especially China, and believe that rates will have to come down on the back of high real rates and external risk. For US duration, we are constructive in the long-term, however, in the short-term it is important to recognize that interest rate volatility can persist. In terms of credit positioning, we prefer higher-quality credit across countries and sectors with strong fundamentals. We will continue to actively monitor and respond to market developments to ensure liquidity and stability.

FUND SIZE AS AT 30.04.2025 : USD 53 MILLION

Manager's Overview

US dollar-denominated Asian investment-grade (IG) bonds posted positive returns even as credit spreads widened during the period. The US Treasury curve experienced enhanced volatility as the Fed began its easing cycle and cut interest rates by 100 bps between September and December 2024. In Asia, the macroeconomic landscape posed challenges, particularly with the implementation of tariffs announced by the incoming Trump administration and China's retaliatory measures. However, despite these challenges, the Chinese credit market remained resilient, particularly in the IG bonds segment, which benefits from strong technical support and robust domestic demand. The Chinese economy expanded by 5% in 2024, meeting the official growth target. During the National People's Congress meeting in March 2025, the Chinese government set a GDP growth target of around 5% for 2025. On the policy front, the People's Bank of China cut key lending rates. Asian manufacturing activity remained subdued as PMIs for most countries generally declined over the period, except for the Philippines and Thailand, which recorded an improvement.

The fund posted positive returns during the period. From a sector perspective, the exposure to banks & brokers, quasi-sovereigns, treasury and insurance added notable value. Conversely, the property sector detracted from returns. From an issuer perspective, Philippines Government bonds, FWD Group and Export Import Bank of Korea were among the top contributors to performance, while New World Development, Adani Green Energy and Dai-ichi Life Insurance held back gains. On the ratings front, the exposure to all rating segments added value.

We expect Asian bonds to remain attractive given favourable macro conditions, solid aggregate fundamentals and technical factors. We prefer higher-quality credit across countries and sectors with strong fundamentals including Japan, Thailand, and Hong Kong financials, as well as selective China and Korean SOEs, financials and a few Asian sovereign names like bonds issued by the Philippines and Indonesia. We also like low beta and high-quality countries such as Australia, Singapore and New Zealand. Overall, we are actively looking for opportunities across regions and instruments to further diversify the fund exposure.

FUND SIZE AS AT 30.04.2025 : USD 845 MILLION

Manager's Overview

US dollar-denominated Asian investment-grade (IG) bonds posted positive returns even as credit spreads widened during the period. The US Treasury curve experienced enhanced volatility as the Fed began its easing cycle and cut interest rates by 100 bps between September and December 2024. In Asia, the macroeconomic landscape posed challenges, particularly with the implementation of tariffs announced by the incoming Trump administration and China's retaliatory measures. However, despite these challenges, the Chinese credit market remained resilient, particularly in the IG bonds segment, which benefits from strong technical support and robust domestic demand. The Chinese economy expanded by 5% in 2024, meeting the official growth target. During the National People's Congress meeting in March 2025, the Chinese government set a GDP growth target of around 5% for 2025. On the policy front, the People's Bank of China cut key lending rates. Asian manufacturing activity remained subdued as PMIs for most countries generally declined over the period, except for the Philippines and Thailand, which recorded an improvement.

The fund posted positive returns but underperformed the comparative index over the period. From a sector perspective, the underweight allocation to quasi-sovereigns and technology & communication names weighed on relative performance. Conversely, the overweight exposure to banks & brokers, insurance and treasury contributed to returns. From an issuer perspective, the overweight allocation to Mirae Asset Securities, Yunda Holding and Bank of East Asia added value, while the underweight stance in Sinopec Group, Republic of Indonesia and Export Import Bank of Korea held back gains. On the ratings front, the allocation to BBB and BB & below-rated bonds & NR added value, while A and AA-rated bonds weighed on returns.

We expect Asian IG bonds to remain attractive given favourable macro conditions, solid aggregate fundamentals and technical factors. We favour Asian local rates, especially China, and believe that rates will have to come down on the back of high real rates and external risk. For US duration, we are constructive in the long-term, however, in the short-term it is important to recognise that interest rate volatility can persist. In terms of credit positioning, we prefer higher-quality credit across countries and sectors with strong fundamentals. We will continue to actively monitor and respond to market developments to ensure liquidity and stability.

FUND SIZE AS AT 30.04.2025 : USD 1,433 MILLION

Manager's Overview

The Asian high-yield bond market remained resilient, posting strong returns as spreads tightened amid favourable rate movements. The US Treasury curve saw volatility as the Fed eased policy with a total of 100 bps rate cuts between September and December. In Asia, trade tensions and tariffs posed challenges, but Chinese investment-grade credit stayed strong, supported by technical factors and domestic demand. China's economy grew 5% in 2024, meeting its target, with a similar goal set for 2025. The People's Bank of China cut rates to support growth, while Asian manufacturing remained subdued, except in the Philippines and Thailand, which saw improvements.

The fund posted positive returns and underperformed the index over the period, primarily driven by positioning in higher-yielding sectors. However, the credit strategy weighed on overall performance. A small underweight allocation to government-related securities and an overweight position in banks and brokers contributed positively. In particular, the exposure to Sri Lankan and Pakistani government bonds, along with an underweight stance in New World Development, supported gains. Conversely, underweight positions in other financials, utilities, and transportation—specifically GLP PTE, Road King Infrastructure, and Vanke Real Estate—held back relative performance. From a ratings perspective, all categories contributed positively except for an overweight stance in B-rated bonds, which detracted from returns.

The manager's investment approach prioritises income generation through bottom-up credit selection, strong fundamentals, and default risk management. In 2025, high all-in yields will drive returns, with limited impact from credit spreads and term structure. Asian economies remain resilient, supported by favourable macro conditions and compressed spreads due to low bond supply. As inflation peaks and central banks ease policy, increased primary issuances should enhance investment opportunities.

FUND SIZE AS AT 30.04.2025 : USD 546 MILLION

Manager's Overview

The China high-yield (HY) bond market was among the best performing markets over the period, which benefitted from strong technical support, robust domestic demand and timely government stimulus. The Chinese economy expanded by 5% in 2024, meeting the official growth target of around 5%. During the National People's Congress, China's legislature, meeting in March 2025, the Chinese government again set a GDP growth target of around 5% for 2025. On the policy front, the People's Bank of China cut key lending rates.

The fund posted positive returns but underperformed the index over the period, primarily due to an unfavourable credit strategy. However, the yield component provided some support. At the sector level, an overweight allocation to consumer goods and banks & brokers contributed positively, while an underweight stance in property and government-related securities constrained gains. At the issuer level, exposure to lower-rated Chinese property names such as Seazen Group and Longfor Holdings generated alpha, whereas an underweight stance in Road King Infrastructure and Vanke Real Estate weighed on performance. From a ratings perspective, an overweight position in BBB and above rated bonds added value, while all other rating categories detracted from relative gains.

Managers remain cautious on China HY amid tight valuations and tariff uncertainty, though limited export sensitivity reduced risks. Attractive yields support investment, with the asset class offering cleaner, higher-quality exposure and protection against rate volatility due to its short duration. China's fiscal stimulus remains in focus, with an emphasis on policy commitment over specific targets. Volatility is expected to persist into 2025, driven by uncertainty around US rates and inflation. Returns will primarily stem from income, given high base rates, with minimal contribution coming from credit spreads and term structure.

FUND SIZE AS AT 30.04.2025 : CNY 1,283 MILLION

Manager's Overview

Chinese renminbi-denominated offshore (Dim Sum) bonds generated positive returns, supported by high coupon income. Chinese onshore bonds also performed well, as the yield curve bull flattened as the People's Bank of China (PBoC) maintained its "loose" monetary policy. For instance, the PBoC reduced the one-year loan prime rate (LPR) twice during the period to 3.1%. Additionally, Chinese authorities announced various supportive measures, particularly in December 2024 when they pledged more proactive fiscal policies. Economic data in China remained robust during the period, with GDP exceeding expectations in both the second and the fourth quarters of 2024. In the corporate space, US dollar-denominated Chinese investment-grade bonds posted positive returns, driven by declines in US Treasury yields, while credit spreads remained nearly unchanged.

The fund generated positive returns over the period, supported by stable coupon income and term structure strategy. However, the credit component weighed on performance. Positively, holdings in renminbi-denominated onshore and offshore bonds added the most value. Additionally, exposure to US Treasuries also aided performance. At a sector level, the allocation to banks and brokers, quasi-sovereigns, and insurance contributed positively to returns, while other financials slightly detracted from performance. At an issuer level, holdings in China Development Bank and QNB Finance Ltd were among the top positive contributors, while exposure to MTR Corporation limited gains. From a ratings perspective, the exposure to BBB-rated bonds proved to be the most rewarding.

The fund focuses on three main markets: renminbi-denominated markets, both onshore and offshore, to provide stable coupon income to anchor returns; and US dollar credits markets to offer tactical trading opportunities. Fundamentally, the outlook for China's economy looks benign, but interest rates are under pressure to edge lower due to higher real rates and external risks. On the rates side, the fund recently has reduced its duration in onshore rates after taking some profits from a rally in yields. Within credits, the managers remain cautious and continue to reduce holdings in offshore US dollar credits to control risk. They also prefer a shorter duration, focusing primarily on the 1–10 years part of the renminbi and US dollar yield curves.

FUND SIZE AS AT 30.04.2025 : USD 292 MILLION

Manager's Overview

Global fixed income markets posted gains despite volatility from shifting interest rate expectations, inflation, and geopolitical risks. US Treasuries outperformed Bunds and Gilts on safe-haven demand. In 2024, strong data delayed rate cuts, but weaker indicators prompted synchronized easing: the Fed cut policy rate thrice late in 2024, the ECB eased steadily from June 2024, and the BoE paused after three cuts. Stronger US labour and inflation data late in 2024 led markets to reassess the pace of further easing, pushing yields higher. In 2025, Trump-era tariffs reignited trade tensions, triggering retaliation and safe-haven flows. Treasury yields fell, Bunds rose on the back of fiscal stimulus, and Gilts accelerated on inflation and politics. The tariffs announced by the US on Liberation Day, 2 April, escalated tensions, further boosting demand for core sovereigns. Credit spreads widened, with corporate bonds lagging sovereigns.

The fund posted positive returns over the period. Both the fund's credit strategy and curve positioning contributed to performance. The fund shifted to a defensive credit risk position in January 2025, while credit spreads widened over the period. We added some risk back in April by selectively adding high-quality credits on the back of weakness. Within sectors, the fund's exposure to quasi sovereign, banks & brokers, other financials, energy, and consumers sectors added value, while the fund's exposure to utilities, particularly Thames Water Utilities, detracted from gains. From an issuer perspective, CPI Property Group and NGG Finance Plc were among the top contributors to returns. Interest rate risk exposure also added value.

The portfolio managers remain cautious, viewing risks as skewed to the downside amid ongoing turbulence from policy surprises and delayed monetary policy tightening effects. To brace for further volatility, they reduced credit risk, with spreads now back to pre-'Liberation Day' levels. They reduced positions and reset the defensive stance, bringing credit exposure to broadly neutral level, while staying flexible. They are selectively adding longer-dated, BBB-rated US corporate bonds, offering near decade-high yields, and reducing the US credit underweight position. This adds attractive income while maintaining a defensive core. In terms of the interest rate strategy, they have similarly moved back to a broadly neutral stance. Given the sharp moves witnessed in April, they have pared back some of the cross-market relative value trades and reduced curve steepening positions. These adjustments aim to rebalance the funds and provide a cleaner starting point from which to navigate the evolving macro landscape. The strategy's positioning continues to be skewed towards decarbonisation winners and inflation-immune business models, with an overweight exposure to quasi sovereign and utility bonds. Additionally, the fund maintained the underweight exposure to energy, reflecting the absence of credible transition stories at this stage. Similarly, in telecoms sector, several large US issuers do not meet our ESG selection criteria.

FUND SIZE AS AT 30.04.2025 : USD 57 MILLION

Manager's Overview

Emerging market (EM) debt posted positive returns over the review period. Hard currency sovereign spreads tightened during most parts of 2024. However, during the last quarter of 2024, geopolitical tensions in the Middle East and US election uncertainties impacted performance. During 2025, wider credit spreads weighed on hard currency bond returns while lower US Treasury yields supported performance. A quick shift in rhetoric from the idea of US growth exceptionalism to a possible slowdown amid uncertainty around policy and tariffs, alongside possibilities of retaliatory tariffs by various countries added to the downside growth risks for the asset class. A mixed trend in commodity prices and geopolitical tensions further added to cautious investor sentiment. For EM local currency returns, EMFX was the key driver of returns over the period.

The fund underperformed the comparative index as term structure detracted from returns, while credit enhanced gains. At a country level, United Arab Emirates and Korea were the key positive contributors, while China was a key detractor. Within United Arab Emirates, an underweight position in Dubai Islamic Bank (DIB SUKUK) contributed positively to returns. An overweight position in Korea's Shinhan Financial Group also added to the gains. At an issuer level, no exposure to TSMC hampered performance.

The managers maintain an underweight position in credit beta since the starting of 2025 due to concerns that spreads were too tight for the macro mix of external and idiosyncratic risk factors. Given the recent spread levels, the managers are seeking to rotate into names that have unjustly widened and cover some of our underweight stances. They remain cautious and the focus is to maintain relatively high credit quality and liquidity, while capitalising on idiosyncratic or market opportunities to add attractive credits.

FUND SIZE AS AT 30.04.2025 : USD 567 MILLION

Manager's Overview

Emerging market (EM) debt posted positive returns over the review period. Hard currency sovereign spreads tightened during most parts of 2024. However, during the last quarter of 2024, geopolitical tensions in the Middle East and US election uncertainties impacted performance. During 2025, wider credit spreads weighed on hard currency bond returns while lower US Treasury yields supported performance. A quick shift in rhetoric from the idea of US growth exceptionalism to a possible slowdown amid uncertainty around policy and tariffs, alongside possibilities of retaliatory tariffs by various countries added to the downside growth risks for the asset class. A mixed trend in commodity prices and geopolitical tensions further added to cautious investor sentiment. For EM local currency returns, EMFX was the key driver of returns over the period.

The fund posted positive returns but underperformed the comparative index over the period. Credit positioning was the key positive contributor to returns, while currency and term structure positioning detracted from performance. Within credit, at a country level, Ukraine and Mexico were the key contributors, while Lebanon detracted from returns. In Mexico, an overweight position in Comision Federal De Electricidad (CFELEC) supported returns. An overweight position in Ukraine's sovereign bonds added to gains, while an overweight position in Lebanon's sovereign bonds hampered performance. The fund's unfavourable currency positioning in the Mexican peso weighed on returns. The fund's US dollar duration position also held back gains.

The fund is closer to neutral level in terms of credit beta. The managers kept an underweight stance in credit beta since the starting of 2025 due to concerns that spreads were too tight for the macro mix of external and idiosyncratic risk factors. Given the recent spread levels, the managers are seeking to rotate into names that have unjustly widened and cover some of the underweight positions. They remain cautious and the focus is to maintain relatively high credit quality and liquidity, while capitalising on idiosyncratic or market opportunities to add attractive credits.

Manager's Overview

Emerging market (EM) debt posted positive returns over the review period. Hard currency sovereign spreads tightened during most parts of 2024. However, during the last quarter of 2024, geopolitical tensions in the Middle East and US election uncertainties impacted performance. During 2025, wider credit spreads weighed on hard currency bond returns while lower US Treasury yields supported performance. A quick shift in rhetoric from the idea of US growth exceptionalism to a possible slowdown amid uncertainty around policy and tariffs, alongside possibilities of retaliatory tariffs by various countries added to the downside growth risks for the asset class. A mixed trend in commodity prices and geopolitical tensions further added to cautious investor sentiment. For EM local currency returns, EMFX was the key driver of returns over the period.

The fund posted positive returns but underperformed the comparative index over the year. Duration positioning supported relative returns, while its currency positioning weighed on performance. Within local currency duration position, overweight position in Mexico's local duration supported returns, while unfavourable positioning in Colombian local duration weighed on returns. Within currency positioning, the Mexican peso and Chilean peso were the key detractors from relative returns.

The managers have been overweight in EM local currency duration position. Real yields in EM local currency bonds look attractive where nominal yields are still high and inflation has fallen, along with favourable external positions. They are looking for attractive opportunities given the mix of both upside and downside risks. Overall, local currency markets still offer attractive yields. EMFX remains vulnerable in terms of global risk sentiment even if the US dollar has weakened recently. The managers maintain a cautious stance, favouring currencies with strong external balances and policy credibility.

FUND SIZE AS AT 30.04.2025 : EUR 1,060 MILLION

Manager's Overview

European bond markets witnessed significant shifts influenced by monetary policy adjustments, fiscal developments, and global economic dynamics. The ECB pivoted to monetary easing, cutting its deposit rate by a total of 150 bps over the period, in response to softening growth and easing inflationary pressures. However, the scale of further easing remains uncertain amid advances in sticky inflation and significant fiscal expansion, which signalled a structural shift in EU fiscal dynamics. Sovereign bond yields reflected these shifts: the German 10-year Bund yield, which reached near 2.9% in March, fell to 2.4% by April-end, driven by renewed demand for safe-haven and fading recession fears. Credit markets remained resilient despite macro volatility, though spreads remained tight by historical standards.

The fund posted positive returns over the period. Both the fund's credit strategy and curve positioning contributed to performance. The fund shifted to a defensive credit risk position towards the end of 2024, while credit spreads broadly remained muted over the period. Within sectors, the fund's exposure to insurance, banks & brokers, utilities, and consumer non-cyclical sectors added value, while the fund's exposure to index credit default swap hedges detracted from gains. From an issuer perspective, ASR Nederland and Bayer were among the top contributors to returns, while there were no credits that materially weighed on performance. Interest rate risk exposure also added value.

Despite ongoing uncertainty from renewed US trade tensions, we believe the outlook for European rates market has shifted. We previously viewed trade conflict as a lasting drag on growth, requiring prolonged ECB rate cuts terminating below 1.5%. However, Germany's recent fiscal stimulus has changed the landscape. As a result, we now see government spending as helping to sustain growth and keeping inflation stickier, reducing the need for deep or prolonged ECB rate cuts. In this environment, we maintain a bias toward short duration, reflecting our view that downside in yields is limited and the risks are skewed toward higher rates. Bund yields are therefore unlikely to fall much going forward and may instead rise above 3%—a scenario many still underestimate. Credit outlook remains cautious with a negative tilt, reflecting tight valuations and macro uncertainty. Elevated liquidity is being maintained to allow for defensive positioning and opportunistic deployment should valuations become more attractive.

FUND SIZE AS AT 30.04.2025 : EUR 431 MILLION

Manager's Overview

European bond markets witnessed significant shifts influenced by monetary policy adjustments, fiscal developments, and global economic dynamics. The ECB pivoted to monetary easing, cutting its deposit rate by a total of 150 bps in response to softening growth and easing inflationary pressures. However, the scale of further easing remains uncertain amid advances in sticky inflation and significant fiscal expansion, signalling a structural shift in EU fiscal dynamics. Sovereign bond yields reflected these shifts: the German 10-year Bund yield, which reached near 2.9% in March, fell to 2.4% by April-end, driven by renewed demand for safe-haven assets and fading recession fears. Credit markets remained resilient despite macro volatility, though spreads remained tight by historical standards.

The fund posted positive returns over the period. Both the fund's credit strategy and curve positioning contributed to performance. The fund shifted to a defensive credit risk position in January 2025, while credit spreads broadly remained muted over the period. Within sectors, the fund's exposure to banks & brokers, insurance, utility, and consumer non-cyclical sectors added value, while the fund's exposure to quasi sovereign and other financial sectors detracted from gains. From an issuer perspective, ASR Nederland and Bayer were among the top contributors to returns, while the exposure to Banque Fédérative du Cr dit Mutuel weighed on performance. Interest rate risk exposure also added value.

Despite ongoing uncertainty from renewed US trade tensions, the managers believe the outlook for European rates market has shifted. They previously viewed trade conflict as a lasting drag on growth, requiring prolonged ECB rate cuts terminating below 1.5%. However, Germany's recent fiscal stimulus has changed the landscape. As a result, they now view government spending as a means to sustain growth and keep inflation stickier, reducing the need for deep or prolonged ECB rate cuts. In this environment, the fund maintains a bias toward short duration, reflecting the view that the downside in yields is limited and the risks are skewed toward higher rates. Bund yields are therefore unlikely to fall much going forward and may instead rise above 3%—a scenario many still underestimate. Credit outlook remains cautious with a negative tilt, reflecting tight valuations and macro uncertainty. Elevated liquidity is being maintained to allow for defensive positioning and opportunistic deployment should valuations become more attractive.

FUND SIZE AS AT 30.04.2025 : EUR 2,405 MILLION

Manager's Overview

The European high-yield (HY) bond market delivered positive returns over the period, driven by favourable technical conditions and strong corporate balance sheets. Throughout the period, the market experienced notable shifts influenced by monetary policy adjustments, fiscal developments, and geopolitical dynamics. The ECB pivoted to a more accommodative stance, reducing its deposit rate by a total of 150 bps in response to slowing economic growth and easing inflationary pressures. However, the extent of further policy easing remains uncertain, given persistent inflationary trends and significant fiscal expansion, which signal a structural shift in the EU's fiscal dynamics. Despite market volatility, high-yield issuers demonstrated resilience in their quarterly results, underscoring the robustness of corporate fundamentals in the current environment.

The fund posted positive returns and outperformed the index over the period. This was largely due to the positioning in higher yielding sectors and a favourable credit selection strategy. From a sector perspective, the overweight stance in banks & brokers and other financials contributed to performance, while the underweight stance in capital goods and communications weighed on relative returns. At an issuer level, holdings in high-quality real estate names like CPI Property and Aroundtown Finance were among the top contributors to performance, while the exposure to Altice France and Telecom Italia held back gains. From a rating perspective, all segments ended in positive territory and contributed to alpha generation.

Managers remain cautious amid slow growth and persistent inflation. Weak market confidence and deferred consumer spending add to the risks, though Europe remains a relatively attractive investment region despite its trade exposure to the US. Key industries, including capital goods and autos, require close monitoring. Continued ECB rate cuts provide support to the market, while a growth slowdown could widen credit spreads, though this is not the base case. The European high-yield market remains stable, with a strong BB-rated bond composition and a preference for defensive, domestic industries.

FUND SIZE AS AT 30.04.2025 : GBP 103 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the period, despite significant volatility that was driven by shifting monetary policy expectations, persistent inflation, and escalating geopolitical risks. Sovereign bonds faced early headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened, prompting easing cycles by major central banks, including the US Fed, ECB, and the BoE.

The fund generated positive returns over the period, primarily due to its term structure positioning. The US-dollar, euro, and sterling duration positions contributed to returns as yields on US Treasuries, German government bonds (Bunds), and UK government bonds (Gilts) fell during the period. Meanwhile, credit exposure added value, with yield and carry significantly enhancing performance. At the issuer level, European real estate companies such as Aroundtown, CPI Property Group, and Heimstaden Bostad were among the leading performers, while utility and energy firms like Thames Water, South-West Utilities, and Tullow Oil held back gains.

The managers believe that trade disruptions resulting from tariffs imposed by the new US administration, along with potential retaliatory measures from affected countries, pose a substantial risk to overall growth and are likely to keep volatility elevated in the near-term. Additionally, the risk of recession in the US has increased, driven by trade uncertainty and deteriorating consumer confidence. In this environment, the managers have increased the headline duration to 6.6 years using US-dollar and sterling duration. On the credit front, they are exercising caution and prefer to be selective in specific market segments where they have greater conviction.

FUND SIZE AS AT 30.04.2025 : USD 1,797 MILLION

Manager's Overview

Global bond markets experienced volatility during the period but ultimately delivered positive returns. Major central banks shifted towards a more accommodative monetary policy stance, reflecting continued progress towards disinflations. Tariffs imposed by the Trump administration in 2025 raised fears of a recession in the US and elevated inflation. Europe boosted defence spending, while UK government bonds (Gilts) were pressured from rising borrowing costs. Within credit, investment-grade credit spreads widened sharply in the US but remained nearly unchanged in Europe and the UK.

The fund posted positive returns and underperformed the comparative index over the period. The term structure positioning added the most value, while both credit strategy and coupon income detracted from returns. The fund's long duration positions in US dollar and euro duration supported performance as sovereign bond yields in both regions declined over the period. Additionally, the fund's short duration positions in Japanese yen also bolstered returns. From a sector perspective, the overweight allocation to high-quality financials contributed to returns positively, whereas the underweight position in quasi-sovereign debt weighed on returns. Moreover, the underweight position in Chinese government bonds held back gains, and a short bias to peripheral European bond markets also dampened returns.

The managers anticipate a slowdown in US economic growth for 2025, with the extent of this slowdown being largely dependent on how US corporates respond to tariffs. They believe US tariff measures are likely to hit consumer confidence and reduce corporate demand for labour due to increased uncertainty. The base case for US growth supports the possibility of aggressive interest rate cuts by the US Fed. The managers therefore retain their long duration position in the US dollar, sterling, and euro, while holding short positions in Japanese bond markets. Within credit, the managers maintain a defensive stance and have excess capacity to add material credit risk into the portfolio if valuations become more supportive of their view on the economic backdrop.

FUND SIZE AS AT 30.04.2025 : USD 371 MILLION

Manager's Overview

Global bond markets experienced volatility during the period but ultimately delivered positive returns. Major central banks shifted towards a more accommodative monetary policy stance, reflecting continued progress towards disinflation. Tariffs imposed by the Trump administration in 2025 raise fears of a recession in the US and elevated inflation. Europe increased defence spending, while UK government bonds (Gilts) were pressured from rising borrowing costs. Within credit, investment-grade credit spreads widened sharply in the US, but remained nearly unchanged in Europe and the UK.

The fund posted positive returns and performed in line with the index over the period. Coupon income and credit positioning, which were attributed to favourable credit selection, bolstered gains. Within sectors, exposures to quasi-sovereign, other financials, ABS/MBS sectors added notable value, whereas holdings in consumer non-cyclical and utilities weighed on returns. At the issuer level, the overweight allocations to Annington Funding and CPI Property Group were among the top contributors, while exposure to Thames Water detracted the most from returns. On the duration front, an overweight position in sterling duration and underweight in Japanese yen duration were the most rewarding, while underweight positions in US dollar and Canadian dollar duration limited gains.

The managers believe that consumption and hiring decisions in the US are subject to a lot of uncertainty due to the US tariffs policy, which is detrimental to growth and market stability. Consequently, they remain cautious - maintaining neutralised rates and credit positions, and looking to reduce credit beta, as potential upsides are limited. Their approach to duration remains tentative, given the ongoing markets fluctuations related to the potential impacts from tariffs. Considering the unprecedented nature of Trump's trade policies, the managers see limited consistent opportunity to generate alpha in this area.

FUND SIZE AS AT 30.04.2025 : USD 186 MILLION

Manager's Overview

Global high-yield bond markets posted positive returns despite heightened volatility that was driven by shifting monetary policy expectations, inflation uncertainty, and geopolitical tensions. Asian high-yield outperformed its US and European counterparts. In late 2024, softening macro indicators prompted synchronized easing by major central banks, with the Fed, ECB, and the BoE implementing rate cuts. However, rising inflation tempered expectations of further easing. Entering 2025, geopolitical risks intensified, with US tariffs on Canada, Mexico, and Chinese industrial imports escalating trade tensions and prompting retaliatory measures. The tariffs unveiled on Liberation Day, 2 April, further fuelled safe-haven flows, boosting demand for core sovereigns. Corporate credit spreads widened amid higher risk premia, with investment-grade and high-yield bonds posting modest gains but underperforming sovereigns amid weaker risk appetite.

The fund generated positive returns but underperformed the index over the period. Its credit strategy and term structure positioning detracted from relative performance; however, higher coupon income provided some value. At the sector level, an overweight position in energy—primarily through exposures to Vital Energy and Petrofac—along with an underweight stance in consumer goods, weighed on returns. Conversely, an underweight allocation to the lower-rated Brazilian transportation company, Azul Secured Finance, contributed positively. At the rating level, positions across all rating categories constrained relative gains.

In the global high-yield fixed income market, the narrative of US exceptionalism has faded given the significant negative global growth risks from tariffs. As a result, investors have begun to diversify away from US assets, causing meaningful spread widening relative to the recent trading range. That said, the managers continue to maintain a neutral stance on the asset class.

FUND SIZE AS AT 30.04.2025 : USD 81 MILLION

Manager's Overview

The global hybrid bond market posted positive returns despite volatility from shifting monetary policy, inflation uncertainty, and geopolitical tensions. US Treasuries outperformed amid demand for safe-haven securities, while German Bunds and UK Gilts faced headwinds from fiscal policy and inflation concerns. Major central banks implemented synchronized easing in late 2024, though rising inflation tempered expectations. Geopolitical risks escalated in early 2025, with US tariffs triggering trade tensions and safe-haven flows. Corporate credit spreads widened, with investment-grade and high-yield bonds underperforming sovereign counterparts amid weaker risk appetite.

The fund delivered positive returns and outperformed the index over the period, primarily driven by a favourable credit strategy and effective term structure positioning. At the sector level, an overweight allocation to banks and brokers contributed positively, largely due to the exposure to high-quality European banks such as KBC Group, Barclays, and ABN AMRO Bank. Conversely, an underweight stance in insurance and other financials constrained gains, with the reduced allocation to Crédit Agricole and Aroundtown SA weighing on performance. From a ratings perspective, an overweight position in AAA and BB-rated bonds added value, further supporting overall fund performance.

The manager maintains an underweight stance in the corporate hybrids space, against the backdrop of a lesser scope for significant compression after the rally. However, we continue to like short call AT1 bonds given their high probability to call. Moreover, the recent change in rating methodology by Moody's for corporate hybrids has also been a key change for the sector. The change has made corporate hybrid financing in US look much more attractive, and therefore has increased issuance in the space. The combination of high investment needs and the change in rating methodology has already had an impact on the segment.

FUND SIZE AS AT 30.04.2025 : USD 2,065 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the period, despite significant volatility that was driven by shifting monetary policy expectations, persistent inflation, and escalating geopolitical risks. Sovereign bonds faced early headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened, prompting easing cycles by major central banks, including the US Fed, ECB, and the BoE. In contrast, credit markets remained resilient and posted positive returns owing to higher yields despite slight widening of spreads across regions.

The fund posted positive returns over the period with both credit exposure and term structure positioning contributing to returns. On the credit front, financials names such as Intesa Sanpaolo and OSB Group were among the leading performers. The allocation to CPI Property Group, a Czech Republic-based real estate company, also added value. Conversely, holdings in US-based Olin, SM Energy and Goldman Sachs held back gains. Meanwhile, the term structure positioning enhanced returns. The US-dollar and euro duration positions added value as yields on sovereign bonds, including the US Treasuries and German government bonds (Bunds), fell during the period.

The managers believe that trade disruptions resulting from tariffs imposed by the US administration, along with potential retaliatory measures from affected countries, pose a substantial risk to overall growth, and these are likely to keep volatility elevated in the near term. Against this backdrop, the managers continue to focus on security selection and alpha opportunities. They used the recent rally in spreads to take profits and reduce the exposure to US high-yield bonds and securitised credit. Meanwhile, they selectively added allocation to emerging market debt, given their attractive yields and stable fundamentals. Over the year, the managers maintained the fund's duration exposure around 6.4 years.

FUND SIZE AS AT 30.04.2025 : USD 575 MILLION

Manager's Overview

Global bond markets experienced a volatile period as major central banks shifted towards a more accommodative monetary policy stance, with the US Fed initiating its easing cycle in September 2024. Meanwhile, geopolitical tensions and policy uncertainty continued to impact the prospects for global economic growth. Tariffs imposed by the Trump administration in 2025 raised fears of a recession in the US, alongside elevated inflation. In terms of economic data, inflation figures eased to 2.2% in the eurozone and 2.4% in the US by March 2025. Within this context, global breakevens in major markets decreased, while real yields rose in the Europe and the UK.

The fund posted positive returns but underperformed the index over the period. The fund maintains a long position in US, UK, and Europe real yields, given the anticipated slowdown in global economic growth. Movements in real yields varied across main markets, with the US leading the declines, benefiting the fund's stance in US real yields. Conversely, increase in UK and Europe real yields resulted in losses. Inflation breakevens experienced a volatile drop in major regions, which overall hurt the fund's UK breakevens positioning via quantitative model. However, the fund's cross-market long US 30-year inflation versus short Euro Area 30-year inflation view enhanced gains, as US widened relative to Euro breakevens.

Recent inflation remains steady, but concerns have risen as current figures do not fully reflect the impact of tariffs introduced in April. The risk of long-term inflation due to US tariffs is expected to rise, despite offsetting effects from falling energy prices. We maintain our cross-market strategy, being long on US and short on Euro long-term inflation expectations. There are strong reasons to adopt a long duration stance in real terms. The US slowdown is worsened by macroeconomic and geopolitical uncertainties from tariffs. The economic growth in Europe and the UK are strained by the possibility of a US recession and tariffs on European goods. Long real rate duration trades, benefiting from growth slowdown, are favoured.

FUND SIZE AS AT 30.04.2025 : USD 1,159 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the period, despite significant volatility that was driven by shifting monetary policy expectations, persistent inflation, and escalating geopolitical risks. Sovereign bonds faced early headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened, prompting easing cycles by major central banks, including the US Fed, ECB, and the BoE.

The fund generated positive returns over the period, primarily driven by its credit exposure. At a sector level, the allocation to financials, real estate and consumer contributed to returns. From an issuer perspective, CPI Property Group, AA Bond Co and OSB Group were among the leading performers, while SM Energy, Celanese US Holdings and ZF Europe Finance held back gains. Meanwhile, the term structure positioning enhanced returns. The US-dollar, euro and sterling duration positions added value as yields on sovereign bonds, including the US Treasuries, German government bonds (Bunds) and UK government bonds (Gilts), fell during the period.

The managers believe that trade disruptions resulting from tariffs imposed by the new US administration, along with potential retaliatory measures from affected countries, pose a substantial risk to overall growth, and these are likely to keep volatility elevated in the near term. Against this backdrop, the managers continue to focus on security selection and alpha opportunities. They used the recent rally in spreads to take profits and reduce exposure to high-yield bonds and securitised credit. Meanwhile, they selectively added allocation to emerging market debt given their attractive yields and stable fundamentals. Over the year, the managers maintained the fund's duration exposure around 2.2 years.

FUND SIZE AS AT 30.04.2025 : USD 441 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the period, despite significant volatility driven by shifting monetary policy expectations, persistent inflation, and escalating geopolitical risks. Sovereign bonds faced early headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened, prompting easing cycles from major central banks, including the US Fed, ECB, and the BoE.

The fund generated positive returns over the period, primarily due to its term structure positioning. The US-dollar, euro, and sterling duration positions contributed to returns as yields on US Treasuries, German government bonds (Bunds), and UK government bonds (Gilts) fell during the period. Meanwhile, credit exposure added value, with yield and carry significantly enhancing performance. At the issuer level, European real estate companies such as Aroundtown, CPI Property Group, and Heimstaden Bostad were among the leading performers, while utility and energy firms like Thames Water, Tullow Oil and South-West Utilities held back gains.

The managers believe that trade disruptions resulting from tariffs imposed by the US administration, along with potential retaliatory measures from affected countries, pose a substantial risk to overall growth and are likely to keep volatility elevated in the near term. Additionally, the risk of recession in the US has increased, driven by trade uncertainty and deteriorating confidence. In this environment, the managers have increased the headline duration to 7.8 years using US-dollar and Japanese yen duration. On the credit front, they are exercising caution and prefer to be selective in specific market segments where they have greater conviction.

FUND SIZE AS AT 30.04.2025 : EUR 81 MILLION

Manager's Overview

The European structured credit market saw significant activity during the review period, characterised by record issuance levels, tightening spreads for most of the period, and strong performance across asset classes. European collateralised loan obligations (CLOs) experienced record new issue volumes both in 2024 with 48.2 billion euro and in the first quarter of 2025 with 17.8 billion euro, driven by investor demand for higher yields. At the end of April 2025, European CLOs held around 270 billion euro in assets, more than 80% of the European leveraged loan market. The net growth of the CLO market for 2024 was lower than the gross new issue volume at 23 billion euro due to older CLOs amortising or being bought back by issuers. Residential mortgage-backed securities (RMBS) continued to lead European securitisation issuance outside of CLOs, holding the largest share in 2024. Spreads in the RMBS sector stayed stable, supported by strong investor demand and a favourable interest rate environment. The floating-rate nature of these securities made them appealing amid anticipated slower rate cuts. Some commercial mortgage-backed securities (CMBS) sectors such as offices faced challenges, to which the fund has minimal exposure and limited to transactions performing well. On 2 April 2025, the US announced higher tariffs on imports, resulting in significant market volatility, including for European structured credit. However, following the pause in tariffs and ongoing trade negotiations, by the end of April, credit spreads had retraced from most of the early April widening and the European structured credit primary market had reopened.

The fund outperformed the European Short-Term Rate index over the period. Its favourable yield component supported returns. On the ratings front, the allocation to BBB rated securities added the most value.

The fund has strategic allocation to CLOs diversified across sectors, coupled with tactical exposure to RMBS, CMBS and ABS, mostly rated investment grade. The target is to provide an annualised return of European Short-Term Rate + 4% across the market cycle.

FUND SIZE AS AT 30.04.2025 : USD 5,281 MILLION

Manager's Overview

US bond markets remained volatile, driven by shifting monetary policy expectations, inflation uncertainty, and escalating geopolitical tensions. In mid-2024, strong economic data and sticky inflation delayed rate cuts, but softening macro indicators later in the year prompted the US Fed to ease monetary policy. Stronger US labour and inflation data late in 2024 led markets to reassess the pace of further easing, pushing yields higher. In early 2025, geopolitical risks took the centre stage. The Trump administration's tariffs on Canada, Mexico, and later Chinese industrial imports sparked fears of a renewed trade war, triggering retaliatory actions from China and rotation into safe-haven securities. US Treasury yields declined despite robust domestic data. The tariff announcements on Liberation Day, 2 April, led to trade conflict escalation, further boosting demand for core sovereigns.

The fund posted positive returns over the period. Both the fund's credit strategy and curve positioning contributed to performance. We maintained an underweight credit risk position, while credit spreads widened over the period. Within sectors, our exposure to quasi sovereign, banks & brokers, consumer non-cyclical, and technology & communication sectors added value, while there were no sectors that materially detracted from gains. From an issuer perspective, Teva Pharmaceutical and AIB Group were among the top contributors to returns, while Citibank and Goldman Sachs held back gains. Interest rate risk exposure also added value as sovereign bond yields declined.

We expect tariff-driven volatility to continue and are remaining nimble in response to headline-driven uncertainty and market moves, which can create opportunities to adjust positioning and take advantage of our defensive base. If these high levels of tariffs persist, our view is that the world economy will not be able to function normally, given that most imported goods for US consumers are still coming from China, and global logistics will be dislocated if the supply chain is disrupted. We have continued to reduce our overweight US duration position, which is predominantly concentrated in the 5–10-year part of the US curve. We think credit markets are still expensive versus historical averages, and that there is not sufficient risk/reward asymmetry to have an overweight stance in credit risk in this environment, given that further weakness is likely in US investment-grade credit markets. While we have kept our headline level credit risk underweight, we have also been selectively increasing credit beta in the fund, where valuations are looking more attractive after spread widening than they have been in previous months.

FUND SIZE AS AT 30.04.2025 : USD 2,584 MILLION

Manager's Overview

The US high-yield (HY) bond market posted positive returns over the period, supported by strong credit fundamentals and favourable technical conditions. However, volatility persisted as shifting policy expectations, inflation uncertainty, and geopolitical tensions drove market sentiment. In mid-2024, robust economic data and sticky inflation delayed rate cuts, but softening macro indicators later in the year prompted a shift in Fed policy. Entering 2025, geopolitical risks dominated, with US tariffs on Canada, Mexico, and China escalating trade tensions. Retaliatory measures triggered a rotation to safe-haven assets, increasing investor uncertainty and widening credit spreads.

The fund delivered positive returns but underperformed the index over the period. Its credit strategy and term structure positioning detracted from relative performance. At the sector level, an overweight position in energy, along with a slight overweight holding in technology and basic industry, weighed on returns, while an underweight allocation to capital goods contributed positively. From an issuer standpoint, the exposure to Charter Communications and an underweight position in Saks Global supported performance. However, an overweight stance in Newfold Digital Holdings and an underweight position in Kohl's Corporation negatively impacted relative returns. At the rating level, positions across all rating segments constrained relative gains.

US high-yield spreads widened, delivering negative returns amid rising stagflation risks. Increased volatility pressures lower-rated credits, with CCC-rated bonds being the most vulnerable as prior compression unwinds. BB-rated bonds are more fairly valued, and BB-B spreads hover near historical averages. Refinancing remains costly and market dispersion is high. Many US HY issuers have reduced debt, offering some insulation against economic shocks, though tariffs may squeeze profit margins. Stronger leverage, interest coverage, and cash flow help to offset risks. Managers remain in an underweight position in US HY, citing persistent economic uncertainties that are not fully priced into spreads.

FUND SIZE AS AT 30.04.2025 : EUR 1,156 MILLION

Manager's Overview

The ECB delivered a cumulative 150 bps reductions in interest rates from June 2024 to April 2025, in response to slowing growth and diminishing inflationary pressures. However, the extent of further easing remains uncertain due to advances in sticky inflation and significant fiscal expansion, indicative of a structural shift in EU fiscal dynamics. On the data front, the annual inflation rate in the eurozone marginally decreased to 2.2% in April 2025, down from 2.4% the previous year. Meanwhile, manufacturing output in April increased at its fastest pace in over three years, although the PMI remained below the threshold for expansion, at 49.

The fund prioritised yield enhancement, along with security of capital and a strong liquidity profile, while adhering to its strict credit quality guidelines. The managers hold a large portion of the portfolio in highly liquid securities, in accordance with the key aim of maintaining liquidity and capital preservation. At the end of the review period, the fund's weighted average maturity stood at 38 days.

The portfolio strategy remains conservative. The focus on credit quality remains high, with exposure to issuers rated Aa3 or higher at 44%. The portfolio is also well diversified across regions. A high level of liquidity is maintained, with approximately 43% of net assets maturing in 30 days or less.

FUND SIZE AS AT 30.04.2025 : USD 2,606 MILLION

Manager's Overview

Robust economic data and persistent inflation delayed interest rate cuts in the initial period of 2024. However, later in 2024, softening macroeconomic indicators led the US Fed to implement a cumulative monetary policy easing of 100 bps, bringing deposit rates to a range of 4.25%-4.5%. In early 2025, yields declined, and the anticipated pace of Fed rate cuts over the subsequent twelve months increased from 56 bps at the beginning of January to 144 bps by the end of April, equating to a possibility of roughly six cuts by April 2026. This shift occurred as market sentiment moved away from the optimism surrounding tax cuts and deregulation, towards concerns over the negative growth implications of a global trade war. On the data front, the annual inflation rate in the US eased to 2.3% in April 2025, the lowest since February 2021, while the S&P Global US Composite Purchasing Managers' Index fell to 50.6 in April 2025, down from 51.3 in the previous year.

The fund prioritised security of capital and a strong liquidity profile along with yield enhancement, while adhering to its strict credit quality guidelines. The managers hold a large portion of the portfolio in highly liquid securities in accordance with the key aim of maintaining liquidity and capital preservation. At the end of the review period, the fund's weighted average maturity stood at 35 days.

The portfolio strategy remains conservative. The focus on credit quality remains high, with the exposure to issuers rated Aa3 or higher at 49%. The portfolio is also well diversified across regions. A high level of liquidity is maintained, with 52% of the net assets maturing in 30 days or less.

FUND SIZE AS AT 30.04.2025 : USD 11 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the past year despite elevated volatility, shifting monetary policy expectations, inflation uncertainty, and escalating geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts, supported by demand for safe-haven assets amid global instability. In mid-2024, strong economic data and sticky inflation delayed rate cuts, but softening macro indicators later in the year triggered synchronized easing by major central banks. In early 2025, geopolitical risks took the centre stage. The Trump administration's tariffs on Canada, Mexico, and later Chinese industrial imports sparked fears of a renewed trade war, prompting retaliatory actions from China, and triggering rotation into safe-haven securities. US Treasury yields declined despite firm domestic data, while Bund yields rose on Germany's proposed debt brake suspension and a €500 billion fiscal plan. Announcement of fresh US tariffs on Liberation Day, 2 April, escalated trade conflict, further boosting demand for core sovereigns. Corporate credit spreads widened globally on higher risk premia, with investment-grade and high-yield bonds posting modest gains, underperforming sovereigns amid weaker risk appetite.

The fund delivered positive returns but marginally underperformed the comparative index after fees and expenses. The underlying US Dollar Cash strategy posted positive returns. The portfolio has large holdings in highly liquid securities, in accordance with its key aim of maintaining liquidity and preserving capital.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity. In line with this, the fund remains fully invested in cash and short-term instruments.

FUND SIZE AS AT 30.04.2025 : EUR 201 MILLION

Manager's Overview

Global equities advanced over the 12-month period, supported by easing monetary policies and resilient economic growth, despite geopolitical and trade tensions. The first half saw moderating inflation, interest rate cuts, and Chinese stimulus boosted boosting sentiments, but volatility arose from after the BoJ's rate hike in July 2024. Optimism followed Trump's election win in November, but it was reversed due to the US Fed's cautious stance on rate cuts and trade policy uncertainty. Volatility increased in April 2025 with US tariff announcements. Financials, utilities, and communication services sectors gained, while the energy sector lagged due to oil price pressures. Key regions, including the UK, Europe ex UK, and Pacific ex Japan, ended higher. Global fixed income markets delivered positive returns amid volatility, driven by shifting monetary policies and geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts due to demand for safe-haven demand assets. Mid-2024's economic data delayed rate cuts, but macro indicators led to synchronized easing later. Early 2025 saw geopolitical risks from US tariffs sparking fears of trade war, with safe-haven flows affecting yields. Corporate credit spreads widened globally with modest gains.

The fund delivered positive returns but underperformed the comparative index over the period. In particular, strategy selection in global aggregate bonds and US equities weighed on returns. In fixed income, the underlying Systematic Global Government Bond strategy detracted from performance due to its credit exposure and term structure positioning. Within equities, the underlying US Core strategy weighed on returns due to security selection in the information technology and consumer staples sectors. Meanwhile, the underweight exposure to the underlying listed alternatives strategy provided some support.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : EUR 424 MILLION

Manager's Overview

Global equities advanced over the 12-month period, supported by easing monetary policies and resilient economic growth, despite geopolitical tensions. The first half saw moderating inflation, rate cuts, and Chinese stimulus boosted sentiments, but volatility arose from a BoJ rate hike in July 2024. Optimism followed Trump's election win but reversed due to the US Fed's cautious stance and trade policy uncertainty. Volatility increased in April 2025 with US tariff announcements. Financials, utilities, and communication services sectors gained, while the energy sector lagged due to oil price pressures. Key regions, including the UK, Europe ex UK, and Pacific ex Japan, ended higher. Global fixed income markets delivered positive returns amid volatility, driven by shifting monetary policies and geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts due to safe-haven demand. Mid-2024's economic data delayed rate cuts, but macro indicators led to synchronized easing later. Early 2025 saw geopolitical risks from US tariffs sparking fears of trade war, with safe-haven flows affecting yields. Corporate credit spreads widened globally with modest gains.

The fund underperformed the comparative index over the year. In equities, the US Core Equity strategy detracted from performance due to security selection in the information technology and consumer staples sectors. In fixed income, the underlying Systematic Global Government Bond strategy weighed on returns due to its credit exposure and term structure positioning. However, they were partially offset by the positive contribution from the Fidelity Europe Equity Research Enhanced ETF strategy, owing to favourable stock selection in industrials sector.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : EUR 351 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced and then paused sweeping tariffs. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Strategy selections in US and Japanese equities were among the major detractors from returns. In particular, the Fidelity US Equity Research Enhanced ETF strategy weighed on returns, due to security selection in the information technology and utilities sectors. Meanwhile, the exposure to Fidelity Japan Equity Research Enhanced ETF strategy proved to be unrewarding due to security selection in the consumer staples sector. Nevertheless, the losses were partially offset by the positive contribution from the Fidelity Europe Equity Research Enhanced ETF strategy, owing to its favourable stock selection in the industrials sector.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced and then paused sweeping tariffs. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund underperformed the comparative index over the period. Strategy selections in US and Japanese equities were among the major detractors from returns. In particular, the Fidelity US Equity Research Enhanced ETF strategy weighed on returns, due to security selection in the information technology and utilities sectors. Meanwhile, the exposure to Fidelity Japan Equity Research Enhanced ETF strategy proved to be unrewarding due to security selection in the consumer staples sector. Nevertheless, the losses were partially offset by the positive contribution from the Fidelity Europe Equity Research Enhanced ETF strategy, owing to its favourable stock selection in the industrials sector.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weight in equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : EUR 37 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the past year despite elevated volatility, shifting monetary policy expectations, inflation uncertainty, and escalating geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts, supported by demand for safe-haven assets amid global instability. In mid-2024, strong economic data and sticky inflation delayed rate cuts, but softening macro indicators later in the year triggered synchronized easing by major central banks. In early 2025, geopolitical risks took the centre stage. The Trump administration's tariffs on Canada, Mexico, and later Chinese industrial imports sparked fears of a renewed trade war, prompting retaliatory actions from China, and triggering rotation into safe-haven securities. US Treasury yields declined despite firm domestic data, while Bund yields rose on Germany's proposed debt brake suspension and a €500 billion fiscal plan. Announcement of fresh US tariffs on Liberation Day, 2 April, escalated trade conflict, further boosting demand for core sovereigns. Corporate credit spreads widened globally on higher risk premia, with investment-grade and high-yield bonds posting modest gains, underperforming sovereigns amid weaker risk appetite.

The fund delivered positive returns but marginally underperformed the comparative index after fees and expenses over the period. The underlying Euro Cash strategy posted positive returns. The portfolio has large holdings in highly liquid securities, in accordance with its key aim of maintaining liquidity and preserving capital.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity. In line with this, the fund remains fully invested in cash and short-term instruments.

FUND SIZE AS AT 30.04.2025 : EUR 27 MILLION

Manager's Overview

Global equities advanced over the 12-month period, supported by easing monetary policies and resilient economic growth, despite geopolitical and trade tensions. The first half saw moderating inflation, interest rate cuts, and Chinese stimulus boosting sentiment, but volatility arose after the BoJ's rate hike in July 2024. Optimism followed Trump's election win in November, but it was reversed due to the US Fed's cautious stance on rate cuts and trade policy uncertainty. Volatility increased in April 2025 with US tariff announcements. Financials, utilities, and communication services sectors gained, while the energy sector lagged due to oil price pressures. Key regions, including the UK, Europe ex UK, and Pacific ex Japan, ended higher. Global fixed income markets delivered positive returns amid volatility, driven by shifting monetary policies and geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts due to demand for safe-haven assets. Mid-2024's economic data delayed rate cuts, but macro indicators led to synchronised easing later. Early 2025 saw geopolitical risks from US tariffs, sparking fears of a trade war, with safe-haven flows affecting yields. Corporate credit spreads widened globally with modest gains.

The fund delivered positive returns but underperformed the comparative index over the period, attributable to its equity exposure. Meanwhile, fixed income allocations added value. In equities, the Fidelity US Equity Research Enhanced ETF strategy weighed on returns due to security selection in the information technology and utilities sectors. That said, the Fidelity European Dividend strategy contributed to performance due to its overweight stance in the financials sector. In fixed income, the underlying Fidelity US Dollar Bond strategy performed positively due to favourable credit exposure positioning.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : EUR 314 MILLION

Manager's Overview

Global equities advanced over the 12-month period, supported by easing monetary policies and resilient economic growth, despite geopolitical and trade tensions. The first half saw moderating inflation, interest rate cuts, and Chinese stimulus boosting sentiment, but volatility arose after the BoJ's rate hike in July 2024. Optimism followed Trump's election win in November, but it was reversed due to the US Fed's cautious stance on rate cuts and trade policy uncertainty. Volatility increased in April 2025 with US tariff announcements. Financials, utilities, and communication services sectors gained, while the energy sector lagged due to oil price pressures. Key regions, including the UK, Europe ex UK, and Pacific ex Japan, ended higher. Global fixed income markets delivered positive returns amid volatility, driven by shifting monetary policies and geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts due to demand for safe-haven assets. Mid-2024's economic data delayed rate cuts, but macro indicators led to synchronized easing later. Early 2025 saw geopolitical risks from US tariffs sparking fears of a trade war, with safe-haven flows affecting yields. Corporate credit spreads widened globally with modest gains.

The fund delivered positive returns but underperformed the comparative index over the period, mainly due to the exposure to equities and the allocation to listed alternatives. Meanwhile, the fixed income allocation added value. In equities, the Fidelity US Equity Research Enhanced ETF strategy weighed on returns, due to security selection in the information technology and utilities sectors. The underlying listed alternatives weighed on performance, primarily due to the allocation to the renewable energy infrastructure and real estate sectors. In fixed income, the Fidelity Systematic Global Corporate Bond strategy enhanced gains, driven by its favourable credit exposure and yield component.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : EUR 686 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced and then paused sweeping tariffs. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund delivered positive returns but underperformed the comparative index over the period, attributable to both equities and the listed alternatives allocations. In equities, the Fidelity US Equity Research Enhanced ETF strategy weighed on returns due to security selection in the information technology and utilities sectors. Meanwhile, the Fidelity EM Equity Research Enhanced ETF also detracted from returns due to its Futures and Options strategy. The underlying listed alternatives weighed on performance, primarily due to the allocations to the renewable energy infrastructure and real estate sectors.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : EUR 564 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced and then paused sweeping tariffs. Against this global backdrop, financials, utilities, and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices. Most of the key regions ended higher, with gains led by the UK, Europe ex UK, and Pacific ex Japan.

The fund delivered positive returns but underperformed the comparative index over the period, attributable to both equities and the listed alternatives allocations. In equities, the Fidelity US Equity Research Enhanced ETF strategy weighed on returns due to security selection in the information technology and utilities sectors. Meanwhile, the Fidelity EM Equity Research Enhanced ETF also detracted from returns due to its Futures and Options strategy. The underlying listed alternatives weighed on performance, primarily due to the allocations to the renewable energy infrastructure and real estate sectors.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weightage to equities over time until maturity.

FUND SIZE AS AT 30.04.2025 : USD 813 MILLION

Manager's Overview

Global equities rose over the year to end-April 2025 but with marked swings. Early gains were fuelled by cooling inflation, rate cuts across major central banks and fresh stimulus in China, even as the BoJ July 2024 hike unsettled markets. Optimism after Donald Trump's November win soon gave way to caution when the US Fed flagged a slower cutting cycle and trade rhetoric darkened the outlook; volatility climaxed in April when sweeping US tariffs were announced, then postponed.

The fund underperformed the cash benchmark over the period. The fund lagged primarily towards the end of 2024, as the stock specific alpha partially eroded in an environment which was more macro-driven. Hence, stock prices were less aligned to fundamentals. Importantly, despite the uncertain macroeconomic backdrop, the strategy exhibited neutrality to beta and other factor risks, as per its design, resulting in active returns predominantly driven by stock specific risks rather than factor risks. Selected positions in health care, consumer staples, financials and consumer discretionary held back gains. On a positive note, stock selection in information technology and utilities added notable value. Regionally, Japan and the UK weighed on performance, while Europe ex UK and North America added value. At a stock level, long position in continuous glucose monitoring company DexCom and a short position in weakly structured US telecom company were among the largest detractors. On a positive note, long position in Siemens Energy added notable value.

Managed by Fidelity's Systematic Investing team, Absolute Return Global Equity (ARGE) is a geared long/short absolute return market neutral fund that offers investors a diversified source of absolute returns, with little dependence on overall market movements. It gives exposure to the breadth and depth of Fidelity's fundamental research by taking long exposure in high conviction Buy rated companies and short exposure in the high conviction Sell rated companies in a portfolio of around 150-200 stocks. The strategy aims to deliver positive returns primarily through stock selection and other factor risks are broadly mitigated. It is market neutral, with no unintended bias towards other factors such as beta, style, country, or sector. Portfolio positioning is therefore a result of our bottom-up stock selection process.

FUND SIZE AS AT 30.04.2025 : USD 32 MILLION

Manager's Overview

Global fixed income markets delivered positive returns over the period, despite significant volatility that was driven by shifting monetary policy expectations, persistent inflation, and escalating geopolitical risks. Sovereign bonds faced early headwinds in mid-2024 as resilient economic data and sticky inflation delayed anticipated rate cuts. However, sentiment improved as growth softened, prompting easing cycles by major central banks, including the US Fed, ECB, and the BoE.

The fund posted positive returns but slightly underperformed the comparative index on a net of fees basis over the period. The duration positioning contributed positively to returns, with the US dollar, euro, and sterling duration positions adding value as yields on US Treasuries, German Bunds, and UK government bonds (Gilts) fell during the period. However, credit exposure negatively impacted performance as spreads widened over the period. At an issuer level, the exposure to utility and consumer names such as Thames Water, Stellantis, and Tapestry detracted from returns, while holdings in Enna, Enel, and Teleperformance added value.

The fund invests across the entire suite of fixed income markets, exploiting opportunities in credit, rates, and currencies, with a focus on relative value and non-directional positions in order to limit market risk factors. The team employs discretionary strategies utilising the full breadth and global reach of Fidelity's investment capabilities. The fund aims to deliver a cash plus 2% return over rolling annual periods in a controlled risk environment, while aiming to generate alpha in different market environments with a focus on downside protection. The fund looks to benefit from rising volatility via strategies that can exploit these environments (such as long/short) and maintains a low correlation with traditional asset classes.

FUND SIZE AS AT 30.04.2025 : USD 113 MILLION

Manager's Overview

Global equities rose over the period, supported by easing monetary policy in most developed markets and resilient economic growth, despite geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts from major central banks, and China's stimulus measures bolstered investor sentiment, although an interest rate hike by the BoJ in July 2024 caused market volatility. The second half started optimistically after Donald Trump's election win in November, but sentiment shifted due to the US Fed's cautious approach on rate cuts in 2025 and trade policy uncertainty. Concerns intensified regarding the implications of US trade policies, leading to heightened volatility in April 2025. Global fixed income markets delivered positive returns despite elevated volatility, driven by shifting monetary policy expectations, inflation uncertainty, and escalating geopolitical tensions. US Treasuries outperformed German Bunds and UK Gilts, supported by demand for safe-haven assets amid global instability.

The fund delivered positive returns over the review period. In the equity hedge bucket, the Absolute Return Global Equity strategy, focused on high-conviction analyst picks, was the top contributor, with the Fidelity Special Values portable alpha strategy also adding value. In the arbitrage and opportunistic bucket, protective options strategies led performance, supported by opportunistic positions in physical gold amid heightened market volatility, alongside the Fidelity China Special Situations strategy. The Fixed Income & Macro bucket saw strong contribution from the Fidelity Global Macro strategy.

The fund is actively managed and aims to provide investors with positive absolute returns, with a low correlation to traditional asset classes over the medium-to-long-term. The fund invests in a combination of diversified underlying strategies that sit within the asset classes of equity hedges, fixed income and macro, opportunistic and arbitrage.

FUND SIZE AS AT 30.04.2025 : USD 155 MILLION

Manager's Overview

Emerging markets (EMs) posted positive returns during the period. The period was marked by volatility as markets globally grappled with shifting expectation of monetary policy, a busy election calendar (in both the US and EMs), and stimulus announcements in China in 2024, while the onset of 2025 brought some relief with a rally in China and some LatAm economies. There was some pull back in the strong performance towards the end of the period after the US imposed tariffs on 2 April, although markets experienced some relief after a 90-day pause was announced for most countries (barring China).

The fund underperformed the comparative index over the period. Both stock picking in China and Hong Kong and the aggregate underweight exposure to China detracted over the period. Stock picking in Kazakhstan (the position in e-commerce platform Kaspi) and the overweight exposure to Brazil also dragged on returns. Stock selection in India and overweight exposure to South Africa was additive. Hong Kong luggage company Samsonite Group came under pressure due to tariffs tensions between US and China and Samsonite's higher exposure to the US market, although fundamentals remain robust. Shares in Mexico's mining company Grupo Mexico were weak as copper prices fell during the period. However, our conviction in the medium-term outlook for copper remains robust, with significant demand drivers relating to electrification and growing use of data centres being met with a very muted backdrop for supply. While the underweight exposure to Tencent detracted from returns, this was more than offset by the position in Naspers, which holds a large stake in Tencent. Another strong performer was India's online travel agent MakeMyTrip, which has a significant growth runway given the penetration of online travel.

The fund's country and sector positioning are a residual of the managers' bottom-up stock picking approach; however, the prevailing environment is a consideration. The managers continue to focus on owning well capitalised businesses with under-levered balance sheets. The fund is conservatively positioned, meaning that the companies owned should be better prepared for what will remain a challenging environment.

FUND SIZE AS AT 30.04.2025 : USD 237 MILLION

Manager's Overview

Global equities advanced during the 12-month period. Easing monetary policy across most developed markets and resilient economic growth supported equities despite elevated geopolitical and trade tensions. In the first half of the period, moderating inflation, rate cuts by major central banks, and stimulus measures in China buoyed investor sentiment, even though an interest rate hike by the BoJ in July 2024 led to market volatility. The second half of the period began with optimism following Donald Trump's election win in November, but sentiment later reversed over the US Fed's cautious stance on rate cuts in 2025 and trade policy uncertainty. Markets were further weighed down by heightened concerns over the impact of US policies on inflation and growth. Volatility exacerbated in April 2025 as the US announced, and then paused sweeping tariffs. Against this global backdrop, financials, utilities and communication services sectors gained strongly, while the energy sector was the key laggard amid downward pressure on oil prices.

The fund underperformed the comparative index over the period. The biggest stock-specific detractors were in the semiconductor space. The position in chipmaker STMicroelectronics saw weak trading after it lowered guidance twice, projecting a recovery later than anticipated due to weak industrial demand. Memory chipmakers Samsung Electronics and Micron Technology also detracted from performance after a strong share price run in the first half of 2024. Meanwhile, the underweight exposure to technology heavyweight Nvidia proved to be unrewarding. While we anticipated a pause to consolidate the 240% share price gain from 2023, this did not materialise, particularly in the first half of the period. Conversely, a combination of stock selection and our overweight positioning in financials proved to be rewarding as financial stocks benefitted from optimism surrounding potential regulatory easing under the new US administration. As such, Arthur J. Gallagher and Berkshire Hathaway were among the key contributors to relative performance.

Nevertheless, the strategy benefits from a diverse investment universe across sectors and geographies, including fast-growing emerging markets. This diversity adds resilience in volatile conditions, with areas like healthcare and communication services offering defensive potential. We also see the ongoing volatility as an opportunity to capitalise on share price dislocations, particularly in areas where stocks have moved with high correlations.
